

# GCSE STATISTICS 8382/1F

Foundation Tier Paper 1

Mark scheme

June 2019

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aga.org.uk

# **Glossary for Mark Schemes**

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Statistics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

M	Method marks are awarded for a correct method which could lead to a correct answer.
Α	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
В	Marks awarded independent of method.
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded for a common misinterpretation which has some mathematical worth.
M dep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
oe	Or equivalent. Accept answers that are equivalent. eg accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between a and b inclusive.
[a, b)	Accept values a ≤ value < b
3.14	Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416
Use of brackets	It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

# **Diagrams**

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

## Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a student has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the student. In cases where there is no doubt that the answer has come from incorrect working then the student should be penalised.

#### Questions which ask students to show working

Instructions on marking will be given but usually marks are not awarded to students who show no working.

#### Questions which do not ask students to show working

As a general principle, a correct response is awarded full marks.

#### Misread or miscopy

Students often copy values from a question incorrectly. If the examiner thinks that the student has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

#### **Further work**

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

#### Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

#### Work not replaced

Erased or crossed out work that is still legible should be marked.

## Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

# Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

#### Continental notation

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the student intended it to be a decimal point.

Question	Answer	Mark	Comments
1	Raw	B1	
2	Temperature	B1	
3	Mean	B1	
4	1/2	B1	

Question	Answer		Mark		Commen	ts
	Headings of : Time (minutes) Frequency	B1	Coi	ndone omission of (n	ninutes)	
	Tallying method with 5 ba	B2	gat B1	tallying method withores used but otherwise tallying method with and three or four o	e correct 5 bar gates	
	Correct frequencies for th	B1ft	ft a	s long as all non-zer	0	
		onal Guida	nce			
	Time (minutes)	Та	ally		Frequency	
5(a)	0	11	1 4			
	1	Ш	1 11 7		7	B4
	2	H	<del>-</del> H 5		5	
	3	11		3		
	4 1 1					
	Accept minutes, min, number of mins etc for Time					
	Do not accept number or m for Time					
	Accept total, freq, f etc for Frequency					
	Do not accept number or frequency density for Frequency					

Question	Answer	Mark	Comments				
	44 identified	B1	May be identified on the	diagram			
	Remove from data or Assume it was intended to be a 4	B1	oe eg clean the data				
	Additi	onal Guida	nce				
	Allow the problem to be mentioned in the one statement	suggestion	and vice-versa or both in				
	If more than one problem or more than or contradictory	ne suggestic	on given ignore unless				
5(b)	To score the first B1 the 44 must be mentioned or identified on the diagram (the 44 can be referenced in the suggestion)						
	44 is an outlier						
	44 identified but the student thinks the data is recorded correctly						
	There is an outlier						
	The problem is the large range of 44 minutes (inappropriate reference to 44)						
	Condone it was intended to be two 4s (they missed out the space)						
	Repeat the collection of data						
	(Nearly) all data has been under 5 minutes (so not a good idea)  B1  oe						
	Additional Guidance						
5(c)	Allow students to assume that the outlier has been removed allowing them to comment that all of the data is under 5 minutes						
	There would only be one (or two) groups			B1			
	He should do it in groups of 2 minutes	(allow 1, 2 c	or 3)	B1			
	Referring to the average being below 5 m	inutes		В0			

Question	Answer	Mark	Comments					
	10 (houses) B1							
	Additi	onal Guida	nce					
6(a)	Ten (houses)			B1				
, ,	10 out of 20			B1				
	<u>10</u> 20			В0				
	20 × 0.1		oe					
	or	B1						
	$20 \times 0.9 = 18$ and $20 - 18$							
6(b)	Additional Guidance							
	10% of 20 is 2 (method for 10% not shown)							
	90% of 20 is 18, 20 – 18 = 2 (method for 90% not shown)							
			B1 54 – 12 or 42					
		B2	or 100 – 54 or 46					
	Sunny, sunny and heavy rain		or 20 20 2 (in any order)					
	(in any order)		or 32 52 54					
6(c)			or 32 34 54					
3(3)	or 14 34 54							
	Additional Guidance							
	Mark intention so allow H or heavy for heavy rain, S or sun for sunny etc							
	Table takes precedence, ignore any working with the correct answer given in the table							

Question	Answer	Mark	Comments				
	Alternative method 1						
	12 x 5 or 60	M1					
	60 so more than the expected number actually cleaned	A1	oe				
	Alternative method 2						
	54 ÷ 5 or 10.8 M1						
6(d)	10.8 so more than the expected number actually cleaned A1 oe						
	Additional Guidance						
	$54 \div 5 = 11$ , so more than the expected number actually cleaned						
	He cleans 6 more (windows) than expected						
	60 is bigger than 54						
	The actual is (on average) 1.2 more than the expected (1.2 can be 1 with working shown)						

Question	Answer	Mark	Comments				
6(e)	Valid reason	B1	eg Perhaps more people wanted their windows cleaning than expected during the light rain / heavy rain day Perhaps Quin's percentages were wrong Perhaps Quin had missed these houses last time so more wanted them doing It is only a small sample				
	Additio	nal Guida	ince				
	Quin might gain new customers during the	week		B1			
	Any reference to the weather changing						
7(a)	Census	B1					
	It will take a very long time or It will be (very) difficult to achieve or It will give too much data	B1	oe				
	Additional Guidance						
	Some people might not give an answer (so	o it will be	difficult to achieve)	B1			
7(b)	Some people may be too young (to comment)						
	It will take too long			B1			
	Too many people to ask (them all)						
	Too many people (vague)						
	It would be biased			В0			
	It will take longer			В0			
	She'll have to ask everyone			В0			

Question	Answer	Mark	Comments				
	How far do you live from the (fracking) B1 Oe Suitable question						
	At least 3 numerical option boxes which are exhaustive <b>and</b> non-overlapping  B1 At least 3 numerical boxes which are exhaustion non-overlapping						
	Additio	nal Guidan	ce				
	Mark intention, condone missing boxes						
	Ignore units						
7(0)	Response section marks can be awarded with an incorrect question as long as the question lends itself to a response section where numerical option boxes can be used						
7(c)	In the response section ignore any box labelled other or don't know						
	10+ can mean 10 or more or more than 10 for example						
	Allow data to be discrete, eg 0-3 4-6 7-10 10+ scores 2						
	Condone gaps of no more than 0.1 for the exhaustive mark						
	If inequality signs are used they must be fully correct for B2, but for B1 condone misuse of strict or inclusive inequality signs  If any inequality sign is facing the wrong way then B0						
	Response section:						
	Yes No Don't know		B0				

Question	Answer	Mark	Comments				
	What is your age? or What is your date of birth?	B1 Suitable question					
	Addition	nal Guidar	nce				
7(4)(1)	Ignore any answer line offered but must not have option boxes or this is now a closed question						
7(d)(i)	How old will you be when the fracking starts?						
	What is your year of birth?						
	What age group are you in? (implies closed question)						
	Any mention of tick a box						
	When is your birthday? (normally doesn't include year)						

	No ticked and May put people off answering or No ticked and (More) difficult to process or Yes ticked and Achieves precise data	B1	oe Can be a negative or positive comment as long as relevant				
	Additional Guidance						
7(d)(ii)	Yes, open questions allow more variety of	answers		B1			
	No, people may lie (as they don't want to reveal their age)						
	No, makes it difficult to compare						
	If the box contradicts the statement then B0						
	No it's quicker to use grouped ages (not really, quicker to just write a number than find the correct age group)						
	People may not answer correctly/accurately/properly			В0			

Question	Answer	Mark	Comments				
	Two correct from:  Shouldn't use 'Do you agree' or Asking two things at once or Uses emotive words	B2	oe B1 One correct from: Shouldn't use 'Do you a or Asking two things at one or Uses emotive words				
7(e)	Additional Guidance						
	Ignore irrelevant statements unless contract	lictory					
	Two criticisms may be mentioned in one sta	atement					
	It's leading, and dangerous and damages a	are strong w	rords	B2			
	Biased question / Leading question						
	A focus on fracking or countryside						
	It is confrontational						

В1

B0

Question	Answer				Mark		Co	mment	s	
	One correct row or column				M1					
	Fully c	orrect				A1				
					Additio	nal Guidar	nce

		3	4	5	6	7	8	9		M1A1
		4	5	6	7	8	9	10		
		5	6	7	8	9	10	11		
		6	7	8	9	10	11	12		
	$\frac{3}{36}$ or 0.083(33) or 8.3(33)%					B2ft	ft their table as long as complete oe fraction eg    1  B1 for correct numerator from the diagram  B1 for correct denominator of 36 only			r from their
-4.540					Additio	nal Guidar	nce			
8(b)(i)	Ignore attempt to simplify correct fraction or change format (except ratio)									
	Do not ignore ratio, eg $\frac{3}{36} = 3:36$							B1		
	3 out of 36								B1	

3:36

3

Question	Answer	Mark	Comment	s	
	Identifies 15 outcomes	M1	May be on diagram or a numerator of fraction	s	
	15/36 or 0.416(66) or 0.417 or 0.42 or 41.6(66)% or 41.7% or 42%	A1	oe fraction eg $\frac{5}{12}$		
	Additional Guidance				
8(b)(ii)	Ignore attempt to simplify correct fraction or change format (except ratio)				
	Do not ignore ratio, eg				
	$\frac{15}{36} = 15:36$			M1A0	
	15 out of 36				
	15 : 36				
	15 (unless clearly from wrong working)			M1A0	
9(a)	$\frac{200}{800}$ (× 60)	M1	oe eg sight of $\frac{1}{4}$		
	15	A1			

Question	Answer	Mark	Comment	s	
9(b)	He may not get a response from every manager (he emails) or (He may need to send) an email to remind managers to respond to the questionnaire or Rogan may acknowledge returns of completed questionnaires (by email)	B1	oe		
	Additio	nal Guidar	nce		
	Ignore irrelevant statements unless contradictory				
	Some managers might not see the email in their inbox and they may need to be sent a reminder			B1	
	Some managers might not see the email in their inbox			В0	
	(Some of the) hotels might have more than one manager			В0	
10(a)	30 – 39	B1			
	This is the midpoint of the group	B1	oe		
	Additional Guidance				
	Ignore irrelevant statements unless contra	dictory			
10(b)	It's in the middle			B1	
	It's halfway (between range)			B1	
	It's in the middle as 24.5 rounds to 25			В0	
	It's the median			В0	

Question	Answer	Mark	Comment	S	
10(c)	Completely correct (correct points joined by line segments)	B2	± 1/2 square tolerance  B1 correct heights and jone error on midpoints or  B1 correct midpoints an one error on heights or  B1 all correct points but	d joined but	
	The modal group is the same (for both countries)	B1ft	oe Strict follow through from	m their (a)	
	Additional Guidance				
	When marking this part you have to ft their part (a) with 30-39 for Norway				
10(d)	Both are 30-39 (so they are the same)			B1	
	Ireland is 30-39, Norway is 30-39			B1	
	In Norway and Ireland teachers are more likely to be 30-39			B1	
	In Norway and Ireland 30-39 year olds are likely to be teachers			В0	

B0

Question	Answer	Mark	Comment	S	
10(e)	Ticks It is not possible to tell which range is larger and gives a correct reason eg We do not know the actual maximum and minimum values	B2	oe B1 for Ticks It is not possible to tell vis larger	which range	
	Additio	nal Guidar	nce		
	If the correct box has been ticked: the groups are the same it's grouped data they are plotted at the midpoints it doesn't give the extra data			B1B0 B1B0 B1B0 B1B0	
	Any correct comparison eg Ireland has a greater percentage of young teachers or From 20-29 to 30-39 the percentage increases for Ireland and for Norway	B1	oe eg Norway has a greater of old teachers or From 30-39 to 40-49 the decreases for Ireland and Norway	percentage	
	Additional Guidance				
	Allow 'young' as a reference to the first ag	e group			
10(f)	Allow 'old' as a reference to the final age of	group			
	Allow similar percentages for 30-39 or sim	ilar percent	ages for 40-49		
	The second highest group is 50-59 (for bo	th)		B1	
	They are both distributed in a similar way			B1	
	They are both M shaped			В0	
	They go up and down in the same way (no	reference	to age group)	В0	

There are no ages below 20 and above 69

Question	Answer	Mark	Comment	s
11(a)	Three correct from: No label(s) or There is a problem with the key or Inappropriate type of diagram or Points should not be joined with full lines (the lines/bars should go up) or Intermediate parts of lines have no meaning or Hard to read off (because the years are slanted) or There are differing gaps between years	В3	oe B2 for two correct B1 for one correct	
		nal Guidan	ce	
	Ignore irrelevant statements unless contract  More than one criticism may be in one stat			
	It should have been a vertical line graph / b is inappropriate)		ot plot (so the diagram	B1
	The key is pointless			
	Hard to read			
	Unclear (too vague)			В0

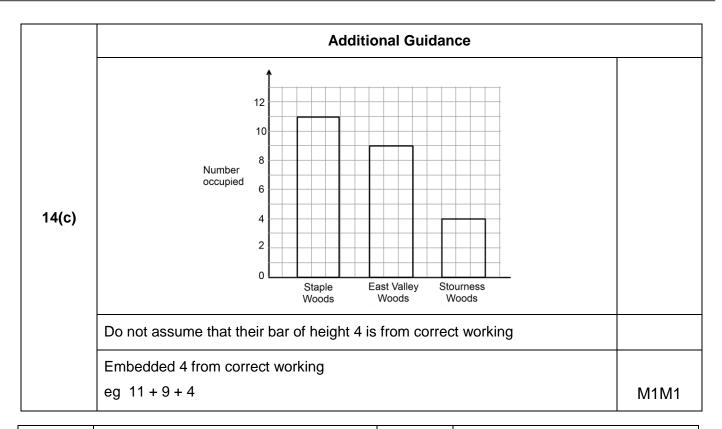

Question	Answer	Mark	Comment	s	
	Any diagram suitable for discrete quantitative data (over time)	B1	eg bar chart, vertical line	e diagram	
	Addition	nal Guidan	ce		
11(b)	Stem-and-leaf / pie chart / scatter diagram	/ frequency	polygon / line graph	В0	
	Condone the interchanging use of words cleg bar graph	hart, graph	and diagram	B1	
12(a)	2007	B1			
	From 2000 to 2010/2011 the number was (usually) increasing and Since 2010/2011 the number has (usually) decreased	B2	oe B1 for From 2000 to 2010/201 number was (usually) in or Since 2010/2011 the nu (usually) decreased or Reference of a year whi the general trend at that 2001, 2008, 2015	imber has	
12(b)	Additional Guidance				
	Ignore irrelevant statements unless contradictory				
	A range of at least 5 years must be given to score, unless making reference to a year that bucks the general trend				
	Allow reference to 2000s to mean 2000/20	01 to 2009/2	2010		
	Both marks may be scored in one sentence eg In the 2000s the numbers were usually on the up but after 2010 they have usually fallen			B2	
	eg Increases until 2010 then decreases			B2	

Question	Answer	Mark	Comments	
	There will have been a different overall number (of Under 16s) in the two years	B1	oe eg it's out of different (total) numbers	
12(c)	The source is a reliable one	B1	oe eg it's the ONS (so they should know what they are talking about)	
, ,	Additio	nal Guidar	nce	
	Any mention of the source is B1 unless the response contradicts its reliability			
	Data comes from the ONS which will have got it from hospitals			
	Data comes from hospitals			
13(a)	24p	B1		
	$\frac{62}{12}$ (× 100)	M1	oe	
13(b)	517	A1	516.() implies M1	
	Additional Guidance			
	Trial and improvement or build up is 0 or 2			

Question	Answer	Mark	Comments	
	$15 \times 5 + \frac{2}{5} \times 15$ or 81 or $15 \times 3 + \frac{4}{5} \times 15$ or 57 or $5.4 - 3.8$ or 1.6 or $1\frac{3}{5}$ or	M1	oe	
14(a)	15 $\div$ 5 = 3 (may be seen on the diagram)		eg 2 parts = 6	
	81 - 57 = 24 or $24 \div 1.6 = 15$ or $15 \div 5 = 3$ and $3 \times 8 = 24$	A1	ое	
	Additional Guidance			
	57 – 81 = 24			M1A0

Question	Answer	Mark	Comments	3	
	6.8 × 15 or 102 or 5.4 × 15 or 81	M1	oe Implied by 0.10(78) o 0.11(11)	or	
	$\frac{11}{\text{their } (6.8 \times 15)} \text{ or } 0.10(78) \text{ or } \frac{11}{102}$ or $\frac{9}{\text{their } (5.4 \times 15)} \text{ or } 0.11(11) \text{ or } \frac{9}{81}$	M1dep	oe		
	Ticks 'No' and $0.10(78)$ or $\frac{99}{918}$ or $\frac{891}{8262}$ and $0.11(11)$ or $\frac{102}{918}$ or $\frac{918}{8262}$	A1	ое		
14(b)	Additional Guidance				
	Allow 11 out of 102 (or 9 out of 81) for first M1				
	For the A1 mark, the proportions must be written in a form where they can be directly compared (eg decimals, percentages or fractions with a common denominator)				
	Allow decimals or percentages to be correctly truncated to 2sf or better, but with rounding answers must be correct to 3sf or better				
	Example of oe instead of 6.8 or 5.4 $\frac{34}{5} \text{ or } \frac{27}{5}$				
	Use of reciprocals is M1 max (unless recovered) $eg \frac{102}{11}$			M1M0	
	$\frac{11}{34}$ or $\frac{9}{27}$ (is M0 unless recovered by div	viding by 3)		МО	

Question	Answer	Mark	Comments
	Alternative Method 1 – using 15		
	6.8 × 15 + 5.4 × 15 + 3.8 × 15 or 16 × 15 or 102 + 81 + 57 or 240	M1	oe Sum of three products/totals, at least two correct
	(their 240 ÷ 10) - 11 - 9 or 4	M1	oe their 240 must come from the addition of three numbers
	Correctly completed bar chart with height of 4 label (Stourness Woods) same gap between 2 <sup>nd</sup> and 3 <sup>rd</sup> bars as between first two bar width equal to the other 2 bars	A1	
14(c)	Alternative Method 2 – using 10% of 15  6.8 × 1.5 + 5.4 × 1.5 + 3.8 × 1.5  or 16 × 1.5  or 10.2 + 8.1 + 5.7 or 24	M1	oe Sum of three products/totals, at least two correct
	their 24 – 11 – 9 or 4	M1	oe their 24 must come from the addition of three numbers
	Correctly completed bar chart with height of 4 label (Stourness Woods) same gap between 2 <sup>nd</sup> and 3 <sup>rd</sup> bars as between first two bar width equal to the other 2 bars	A1	
	Additional guidance for th	is questio	n is on the next page

	How do you (usually) travel to school?	B1	oe options not required	
	Additional Guidance			
	Ignore any options / response boxes			
15(a)	Ignore time period			
	Condone school to home			
	Which way do you travel to school? (ignore ambiguity)			B1
	How do you usually travel?			В0

Question	Answer	Mark	Comment	s
	True, 3 out of 30 (is 10%) or (True,) 3 out of 30 is 10%	B1	oe	
	(Probably) false, there is no way of knowing whether Charlie's data is representative of the whole school	B1	oe	
	Additio	nal Guidar	nce	
	Ignore irrelevant statements unless contract	dictory		
	Accept yes/right/correct for true and no/wro	ong/incorre	ct for false etc	
	False can be implied in the second B1 by a	a full correc	t description	
	First B1			
	Yes, 1 out of 10 is equal to 3 out of 30			B1
15/h)	It is correct because $\frac{1}{10}$ travel to school			ВО
15(b)	True, $30 \div 3 = 10(\%)$			В0
	Correct, 10% do travel by car		В0	
	This is wrong			В0
	Second B1			
	It's only a sample (implies false)			B1
	It could be different for all students (impl		B1	
	Wrong because in every 30 people there is	sn't always	3 that travel by car	B1
	False because there are a lot more studen	ts than frie	nds	B1
	Haven't got enough data to work that out	(implies fa	alse)	B1
	Should have done a census (implies fals	se)		B1
	A sample isn't always representative (im	plies false)		B1
	It's a sample (does not imply false)			В0

Question	Answer	Mark	Comments	6
	The general trend is increasing (so more people are using cars to travel) or No / not confirmed as the graph only shows increase in (passenger) km travelled (not number of people travelling) or No / not confirmed as increase could be in numbers of taxis/vans	B1	oe	
	Addition	nal Guidan	ce	
	Ignore irrelevant statements unless contract	dictory		
	Positive gradient implies increasing			
	Decision can be implied			
	Allow passenger but not number of passengers for passenger km			
	Do not allow people for passenger km			
15(c)(i)	It's likely that more people are using cars to travel as it (implies graph) increases			
	No because the line includes cars, vans and taxis			
	No because more people could be using taxis and vans			
	No, it does not show cars alone			B1
	Condone positive correlation/trend			B1
	Yes, it's increasing (implies graph)			
	True as the graph slightly increases (slightly so could be referring to rail travel)			В0
	Reference to car sharing or population increase			В0
	Over time more people have opted for the road rather than rail			В0
	The graph confirms it			
	It does confirm as it shows the number of passengers using cars			В0
	It might not be people using their cars but that they are driving further			В0
	There is an increase in the amount of people travelling in a car			В0

Question	Answer	Mark	Comments	<b>S</b>	
	There is no information on how many (more) roads have been built / cars on the road so it is not possible to tell (if roads are getting busier) or  It is likely that roads are getting busier due to the (large) increase in the (passenger) km travelled	B1	oe		
	Addition	nal Guidan	се		
	Ignore irrelevant statements unless contract	dictory			
	Allow passenger but not number of passen	gers for pas	ssenger km		
	Do not allow people for passenger km				
	If there is an increase in passengers, there will probably be an increase in cars so the roads are busier (B0 without the 'probably')				
	This might be true but an increase in passengers does not mean an increase in cars				
15(c)(ii)	We cannot tell as roads might have got bigger			B1	
	It doesn't show that the roads are busier, just that there are more passengers				
	The graph doesn't show that roads are busier but there will probably be a positive correlation with the number of miles travelled				
	True / Yes / Confirmed				
	The graph doesn't show that roads are busier but there will probably be a correlation with the number of miles travelled				
	We cannot tell. This shows the number of passengers not cars				
	Higher number of cars doesn't mean the roads are definitely busier				
	Roads are getting busier because there are more cars, vans and taxis				
	Cannot tell, the number of passengers is increasing but number of cars might be the same or less (implies car sharing)				
	Cannot tell as the graph doesn't tell us anything about how busy the roads are			В0	
	It might be true or it might be that cars are driving further			В0	
	Reference to car sharing				

Question	Answer	Mark	Comments	5
	Two correct statements eg (Slight) decrease at the start or (From 1952) train travel was constant/steady (for many years) or (In recent years) it has increased or Numbers always been less than road or Rail travel was never bigger than 100	B2	oe B1 for one correct stater  Allow [60, 100] for 100	ment
	billion (passenger) km  Additional Guidance			
	Ignore irrelevant statements unless contradictory			
15(d)	Allow passenger but not number of passengers for passenger km			
	Do not allow people for passenger km			
	Do not allow B2 for two comparative statements (about car and rail)			
	Do not allow B2 if there are two contradictory statements			
	eg			D4
	Steady over the period, increases over the period  It's been steady but increased			B1 B1
	It's been (mostly) steady over the years. It increased at the end / around 2016			B1
	Both marks can be awarded in the same sentence eg			
	Mostly stayed the same but increased a bit over the last few years			B2
	It's been steady (but) then increased			B2
	An increase between 1952 and 2016	increase between 1952 and 2016		B1
	2016 value higher than 1952 value			B1
	It's highest in 2016 (doesn't reference travel over the years)			

Question	Answer	Mark	Comments	
	(Arithmetic) mean	B1		
	Sight of 408 ÷ 12 (= 34)	B1	oe	
45(-)(:)	Additio	nal Guidan	се	
15(e)(i)	408 may be seen as list of additions (with o	or without ze	eros)	
	Condone missing brackets when adding nu	umbers and	dividing by 12	
	Do not ignore an incorrect answer for 408 or 34			
	Not a good measure of average in this		oe	
	case due to the (large) outlier	B1	eg not good due to the 387	
	Additional Guidance			
	Any additional statements must be correct			
15(e)(ii)	Accept anomaly, extreme value etc for outlier			
	The mean/average is unrepresentative of the data			B1
	One result is a lot bigger than the rest so not a good measure			B1
	One result is bigger than the rest so not a good measure			В0
	It's not very accurate due to the outlier			В0
	It's the odd one out / biggest			В0

Question	Answer	Mark	Comments		
	Two from:  Mode or Median or Geometric mean	B1	This mark can be implied by two following statements		
15(e)(iii)	Use median as it gives a reasonable (middle) value / is not affected by outlier and  Mode gives an answer which is the lowest value of the data (so it is not suitable)  or  Geometric mean gives an answer which is the lowest value of the data (so it is not suitable)  or  Geometric mean is not suitable in this context	oe B1 for one of Median as it gives a reasonable (middle) value / is not affected by outlier or Mode gives an answer which is a lowest value of the data (so it is suitable)  or Mode is 0 and is representative a it appears 5 times (out of 12) / nearly 50% / frequently or Geometric mean gives an answer which is the lowest value of the data (so it is not suitable) or Geometric mean is not suitable if this context			
	Additional Guidance				
	For B3 must choose median (and reject the other average)				
	Allow outlier ignored/eliminated/excluded for 'not affected by outlier'				
	Mode may be selected as the best measure of average to use for B2 max				
	Mode is 0 is not enough to imply lowest value of the data				
	Median is 1 is not enough to imply a reasonable value				

Question	Answer	Mark	Comments	5	
	How Charlie's friends travel to school or How many times her friends had used a train	B1	oe eg friends' answers		
	Additional Guidance				
15(f)	The frequency table (implies how Charlie's friends travel to school)			B1	
( )	Questionnaire answers (implies the ans	wers to the	question from part (a))	B1	
	Asking her friends (how many times they have used the train) (this is not the data)			В0	
	The raw numbers			В0	
	The data			В0	
	The transport information (from the website)				
	or The graph (from the website)	B1			
	Or The billion (passanger) km per year				
15(g)	The billion (passenger) km per year  Additional Guidance				
	650 billion passenger km in 2016			В0	
	The (news) website			В0	
	(The) Department for Transport			В0	

Question	Answer	Mark	Comments		
15(h)	Obtain more data or Don't just ask her friends or Use (random) sampling to choose who to ask or Use more than one website	B1	oe		
	Additional Guidance				
	Use a stratified sample (implies asking people other than friends)			B1	
	Census (implies everyone in her school)			B1	
	Ask more friends			В0	
	Reference to the outlier			В0
