The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 11 printed pages and 1 blank page.

Scenario 1 Questions 1 and 2

www.papacambridge.com Alexandria Regional Bank is a small bank with three branches. However, it wants to introduce line banking system using the Internet. In order to ensure that the system will work effectively it has employed the services of a systems analyst. The analyst will investigate the current methods of carrying out transactions.

At the moment, all paying in slips and cheques are gathered together in the course of the day and are then batch processed overnight. Many customers pay their bills by writing a cheque together with the invoice which is similar to a paying in slip. Sometimes customers call in or phone the branch to find out the balance on their account. Statements are only sent to customers at the end of each month.

Scenario 2

Questions 3 and 4

Maharashtra fashions is a very large mail order catalogue company which sells a variety of clothes. When the company was first formed by Vikram Jain he used to buy small quantities of clothes and then sell them by mail order. He advertised in local newspapers to attract customers. Before long he employed staff to keep records of all their stock in folders.

Vikram has decided to computerise the company operations. He has employed a systems analyst who has completed the Analysis stage. One of the recommendations of the systems analyst was that the payroll system at the company should also be computerised.

Vikram is also going to open a call centre so that customers can phone in their orders. He will need to buy hardware and software to set up his call centre. This will be needed to link all the operators to the main computer system.

Vikram has decided to employ a new worker, Ashray, to create a web page to advertise these new developments.

Vikram will also have his own computer and he will run business software on it.

Scenario 3 Question 5

John is a travelling salesman. When he first started his job, he used to take with him a road atlas to find his way to the companies he was visiting. He kept a book diary for his appointments together with a section for writing down phone numbers. If he was delayed in traffic he was unable to contact the company he was visiting to inform them he was going to be late. This meant he often missed appointments.

After visiting companies he would go back to his hotel and write a report in a book he kept for that purpose. He was often frustrated by not being able to find out much information about the company before his visit. As a result he was often unprepared for his visit.

He likes music and had a portable cassette player with headphones which he would listen to when not at work.
