## www.papacambridge.com MARK SCHEME for the October/November 2010 question paper

## for the guidance of teachers

## 0460 GEOGRAPHY

0460/22

Paper 2, maximum raw mark 60

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

(b) Mark first name given. Ignore other detail, even if given first.

	northern square only (9599)	southern square only (9598)	both of these grid squares	neither of these grid squares
motorway			~	
school				✓
spur			~	
land sloping down to the NE	✓			
land over 300 m		✓		

More than one tick per row = 0.

(c) Use the on-screen ruler to measure as follows. You may need to go to full screen view to see the labels or they may be shown in the view for (c)(iii).

- (i) river between 86 and 88 mm from southern edge, [1]
- (ii) bridge between 58 and 62 mm from southern edge,

[5]

[1]

			2.
Page 3	Mark Scheme: Teachers' version	Syllabus	S.
	IGCSE – October/November 2010	0460	No.

(iii) road between 45 and 49 mm from southern edge,

Each should be identified by a label and by a line or an arrow or other clear indicated position. The label could be the name, e.g. "river", or the number, e.g. (i).

Cambridge.com Lines ending more than about 5mm from the profile = 0. If the line is within tolerance of 5mm but does not reach the profile, mark the point where it would meet the profile if extended.

If the candidate indicates a range and any part of the range is outside the mark scheme tolerance then = 0.

If labels point to the base line allow max 1.

- (d) (i) 9300, 6 figure grid reference = 0
  - (ii) 935968,

[1]

[1]

(e) steep (sides/valley/slopes), (moderately steep, quite steep, steeper and steep gradient of river all = 0) cliffs, (steep cliff = 1 not 2) deep/50-100m, (deepening = 0) narrow. gorge/canyon/ravine, winding (valley), (interlocking) spurs, gentle gradient (long profile), steep gradient in south (long profile), tributary valley/valley confluence/valley splits, gentle upper slopes,

Points must refer to the valley and not to the river. If clearly describing the wrong square, max 3

[5]

[1]

- 2 (a) (i) Plots at 255mm for March and 175mm for October (with line nearer the centre than the top or bottom of the square), Both must be correct. Shading not needed. [1]
  - (ii)  $2 (^{\circ}C), (25 27 = 0)$ [1]
  - (iii) high,
  - (iv) all year/no dry season/every month, = 1 double maxima, or increases twice, or decreases twice. or high/most in May and December (or ranges of months including May and December), or

less in February and September (or ranges of months including February and September), = 1[2]
