# www.papacambridge.com MARK SCHEME for the October/November 2009 question paper

## for the guidance of teachers

# 2217 GEOGRAPHY

2217/02

Paper 2 (Investigation and Skills), maximum raw mark 90

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

CIE will not enter into discussions or correspondence in connection with these mark schemes.

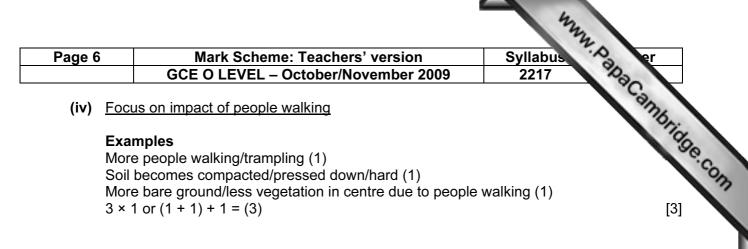

CIE is publishing the mark schemes for the October/November 2009 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

	5	Mark Scheme: Teachers' version	Syllabus 🔗 er
		GCE O LEVEL – October/November 2009	2217 22
(a) (i)		. cover and height need reference to use of early k. Any 4 points below; no reserves.	Syllabus 2217 quipment and/or what (1) s 10 metre transect (1)
	Vegetati	points are 1 metre apart/equidistant/systematic <b>ion cover</b>	(1)
	<u>Quadrat</u> Calculate	ed to measure width of path (1) by laying across used to measure area of veg/cover/bare ground e percentage of veg/bare ground by counting so	d (1).
	<u>Ruler</u> us	<b>ion height</b> sed to measure height of vegetation at each sam number of measurements and calculate average	
	4 × 1 = (		- ( - )
(ii)	•	tion of kite diagram.	
	2P + 1S	or each plot. Tick S for shading. = (3)	
(iii)		tion of bar graph. <u>Plot 4, 5, 12, 17</u> . Tick P twice. t = 2 marks, 2 or 3 correct = 1 mark Shading/1	
(iv)	If write h	esis is true – tick H (1) OR erosion <b>does</b> decreas hypothesis must change wording of that given. A lata in evidence.	
	Vegetati No veg.	<u>e</u> : More bare ground in centre. (1) ion increases in height away from centre (1) at site 6 in the centre but heights of 14 cm ar htre (1 + 1D)	nd 11 cm at sites 1 and 11 aw
	1H + 2 =		
(b) (i)	<u>Must ref</u> each.	er to three different pieces of equipment from di	iagram and what is done with
	Pour a s	<b>es</b> hammer <u>drainpipe/tube</u> into ground (1) set/measured amount of <u>water</u> from <u>bottle/jug</u> int <u>owatch/watch</u> to time how long it takes for the w	
	3 × 1 = (	V	
		tion of line graph. <u>Plot 48, 30, 38</u> . Tick P twice. F st be on the centre square above the relevant nu	
(ii)			k complete line - 1
(ii)	3 correct	t plots + complete line = 2, 1 or 2 correct plots + t plots but no complete line = 1 max. (2)	
(ii) (iii)	3 correct 2 × 1 = (	t plots but no complete line = 1 max.	

(c) Can refer to B and C in general or separately. Reserve 1 for H and W. Marks are for <u>HOW</u> and <u>WHY</u> (Tick H and tick W; max. 2 for each). Can match H/W any way.

### Examples

HOW B and/or C different	WHY results differ
Vegetation could be taller (1)	Because less walkers (1)
More veg. cover/less bare ground (1)	Because further from car park (1)
Woodland path may be narrower (1)	Because trees restrict width for walkers (1)
Greater compaction/erosion (1)	Because walkers concentrated (1)
Less compaction/erosion (1)	Too far to walk to from car park (1)

2H + 1W or 1H + 2W = (3)

 (d) <u>Pedestrian count</u> to find out number of walkers. <u>Questionnaire</u> to find out why people came to the area/frequency of visiting/when they came. If "destination" must refer to place within the map area. <u>Different times of year</u> to see if results were affected by different weather/seasons/holiday patterns 3 × 1 = (3)

(e) First list OK with no qualification/elaboration. Ideas such as:

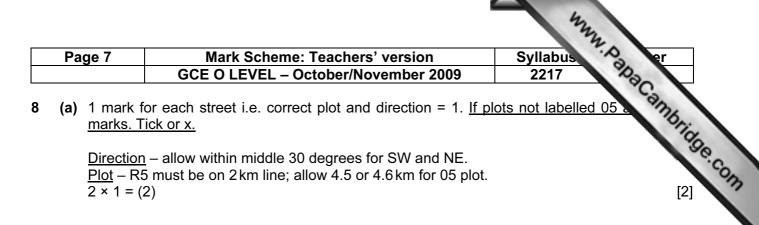

Restoration of footpath/create permanent paths (1) Create alternative/signposted paths (1) Improve drainage (1) Fence off areas/restrict access (1) Re-seed area around footpath/allow area to recover (1) Information and education centres (1) Build small/low bridges (1) Create nature reserves (1)

### List below needs qualification/elaboration. Ideas such as: Rules <u>about how to behave</u>/charges <u>for car parking</u>/fines <u>for misdemeanours</u> (1) Use rangers <u>to manage where visitors go/the environment</u> (1) More bins <u>to reduce littering</u> (1)

Education <u>about the environment</u> (1)

[Total: 30]

[3]

Direction – allow within middle 30 degrees for SW and NE. Plot – R5 must be on 2 km line; allow 4.5 or 4.6 km for 05 plot.  $2 \times 1 = (2)$ 

(b) (i)

Clear road with light parking Traffic moving freely, light parking Traffic moving freely, heavy parking Traffic congested, not moving freely

All correct for mark. Tick or x.

(ii) Ticks and/or x.

BEST = e.g. intermediate level of noise

WORST = e.g. High/loud/very noisy

Or similar descriptions. Look for a "step-up" in noise as go down the table.  $2 \times 1 = (2)$ 

(iii) Do not allow what they have already done e.g. chosen sites/area of town to survey; prepared an env. survey sheet.

### Examples

Whether to survey individually or in a group/pairs (1) How much time was available to do surveys (1) When would be best to do the surveys (1) Subjective nature of survey (1) Whether to base survey on whole street or measured section (1) Ground floor only/all floors land-use (1) How to identifying main land use (1) Safety refs (1 max.)  $4 \times 1 = (4)$

	GCE O LEVEL – October/November 2009	2217 23
Cre <u>Ag</u> i sco	marks for accepting/rejecting H. Marks for evidence su edit data mark tick D if refer to two distances/env. score ree with the hypothesis that it does vary because the pres with high scores both close and far away from ween.	re is a range of environment
	<u>agree</u> : because there is no clear overall pattern that e distance from the town centre	nvironmental quality is affected
~ y	1 = (2)	[2]

Environmental quality reference sheet: Descriptions are vague (e.g. small amount of litter and much litter. No noise) Not all subject categories apply to each street (e.g. Open space street may have no street furniture) Individuals will score the same street differently because survey is subjective New categories needed e.g. type of pollution.

Four land use categories: Most streets contain a mixture

Most streets contain a mixture of different land uses Land use categories are wide (e.g. residential, open space) Not enough categories/more land-uses/not varied enough Open space may be farmland or derelict land or Industrial may be a modern distribution site or 19<sup>th</sup> century factory No commercial/offices No schools/leisure centres/ other specific uses/"Others" (1 max)

3 + 1 or 2 + 2 = (4)
