GCSE

COMBINED SCIENCE: TRILOGY

Higher Tier Physics Paper 2H

8464/P/2H

Friday 14 June 2019 Morning

Time allowed: 1 hour 15 minutes

For this paper you must have:

- a protractor
- a ruler
- a scientific calculator
- the Physics Equations Sheet (enclosed).

At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.

BLANK PAGE

INSTRUCTIONS

- Use black ink or black ball-point pen.
- Answer ALL questions in the spaces provided.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

INFORMATION

- The maximum mark for this paper is 70.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

DO NOT TURN OVER UNTIL TOLD TO DO SO

0 1

FIGURE 1 shows a runner using a smart watch and a mobile phone to monitor her run.

FIGURE 1

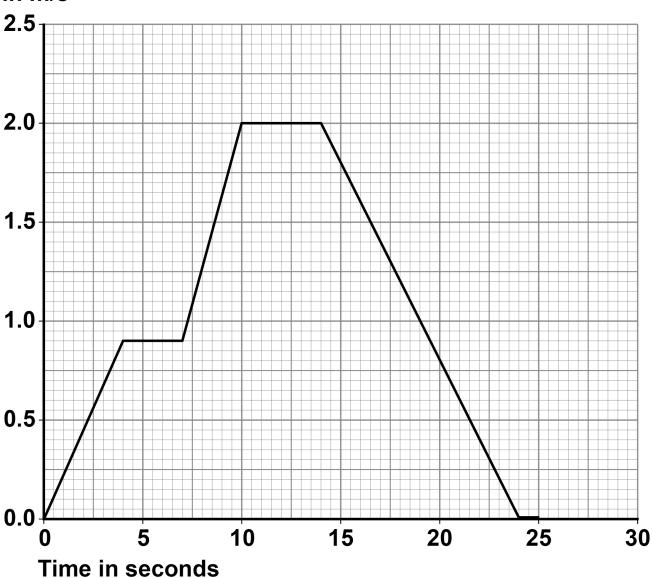

BLANK PAGE

FIGURE 2 is a velocity-time graph for part of the runner's warm-up.

FIGURE 2

Velocity in m/s

01.1	Determine the total time for which of the runner was increasing. [2	
	Time =	S
01.2	Determine the deceleration of the [2 marks]	
	Deceleration =	m/s ²

	connected to each other by a system called Bluetooth.
	Bluetooth is wireless and uses electromagnetic waves for communication.
01.3	Suggest why the phone and watch being connected by a wireless system is an advantage when running. [1 mark]
01.4	Write down the equation that links frequency, wave speed and wavelength. [1 mark]

	Wavelength =	m
	electromagnetic waves. [3 marks]	
	Calculate the wavelength of the	
	The speed of electromagnetic waves i 300 000 000 m/s	s
0 1 . 5	The electromagnetic waves have a fre of 2 400 000 000 Hz	quency

0 1.6 TABLE 1 shows some information about four types of Bluetooth.

TABLE 1

Type	Power in milliwatts	Range in metres
1	100	100
2	2.50	10.0
3	1.00	1.00
4	0.50	0.50

Mobile phones use type 2 Bluetooth to communicate with other devices.

Suggest TWO reasons why. [2 marks]

BLANK PAGE

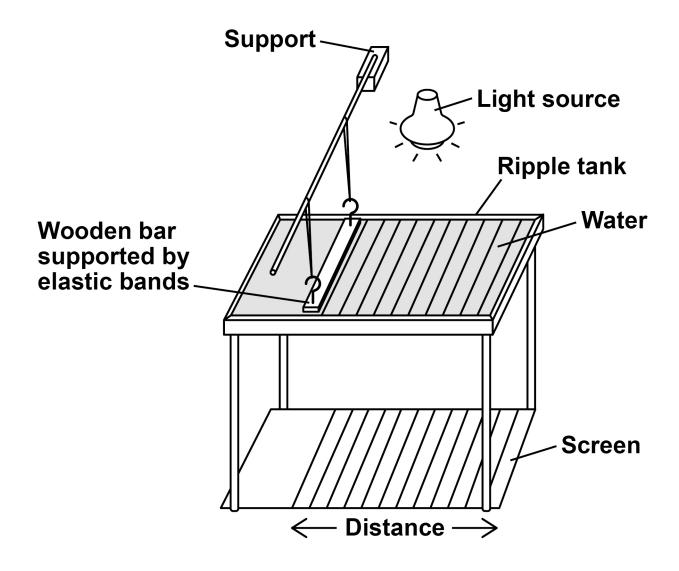

0 2

FIGURE 3 shows the equipment a teacher used to determine the speed of a water wave.

The equipment includes:

- a ripple tank filled with water
- a wooden bar that creates ripples on the surface of the water
- a light source which causes a shadow of the ripples on the screen.

FIGURE 3

02.1	Describe how equipment in FIGURE 3 can be used to measure the wavelength, frequency and speed of a water wave. [6 marks]

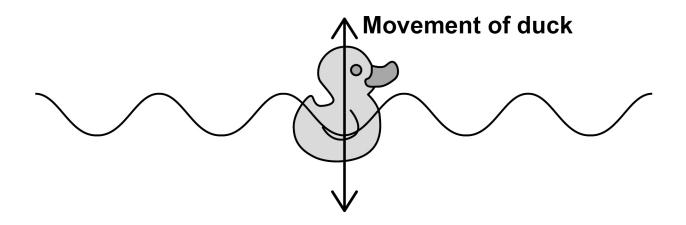

The teacher put a plastic duck in the ripple tank as shown in FIGURE 4.

The plastic duck moved up and down as the waves in the water passed.

FIGURE 4

02.2	How does the movement of the plastic duck in FIGURE 4 demonstrate that water waves are transverse? [1 mark]

10 2 . 3 The teacher measured the maximum height and the minimum height of the plastic duck above the screen as the wave passed.

The teacher repeated his measurements.

TABLE 2 shows the teacher's measurements.

TABLE 2

Maximum height in mm	509	513	511
Minimum height in mm	503	498	499

	Calculate the mean amplitude of the water wave. [3 marks]		
	Mean amplitude =	mm	
[Turn ove	er]	10	

0 3	Some quantities are scalars and some are vectors.	
03.1	Which of the following quantities are scalars? [2 marks]	
	Tick (✓) TWO boxes.	
	Displacement	
	Distance	
	Force	
	Speed	
	Velocity	

03.2	Give the difference between a vector quantity and a scalar quantity. [1 mark]					

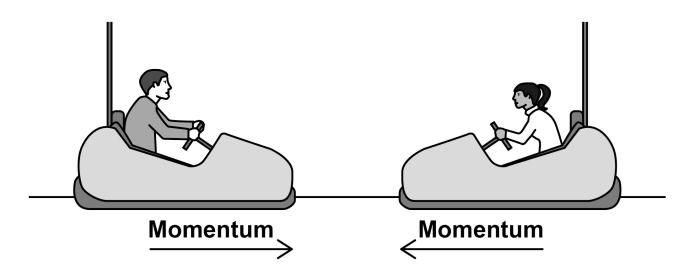

Bumper cars are a fairground ride and are designed to bump into each other.

FIGURE 5 shows two bumper cars moving towards each other.

The momentum of each bumper car is shown by an arrow.

FIGURE 5

03.3	Give TWO factors that affect the momentum of each bumper car. [2 marks]
	1
	2

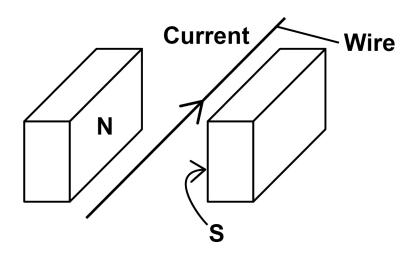

0 3 . 4	The bumper cars crash into each other and stop.
	Explain why both bumper cars stop after the crash. [4 marks]
· T	

0 4 FIGURE 6 shows a wire in a magnetic field.

The direction of the current in the wire is shown.

FIGURE 6

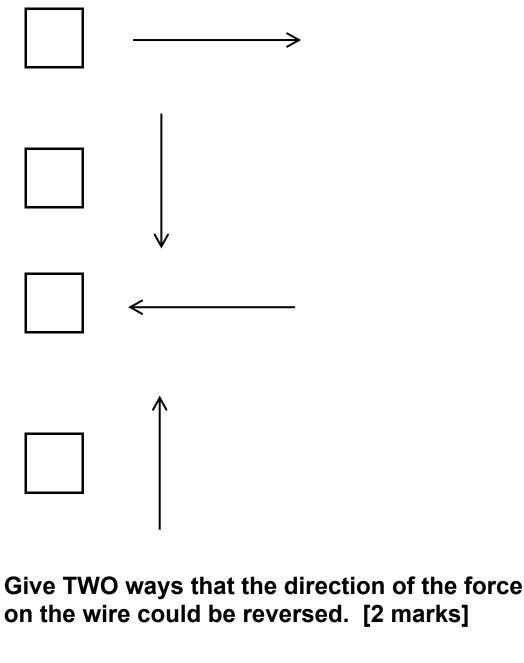

0 4.1 There is a force on the wire due to the current in the magnetic field.

In which direction is the force on the wire? [1 mark]

Tick (✓) ONE box on the opposite page.

04.3	The length of the wire in the magnetic field is 0.050 m
	The force on the wire is 0.072 N
	magnetic flux density = 360 mT
	Calculate the current in the wire.
	Use the Physics Equations Sheet.
	[4 marks]

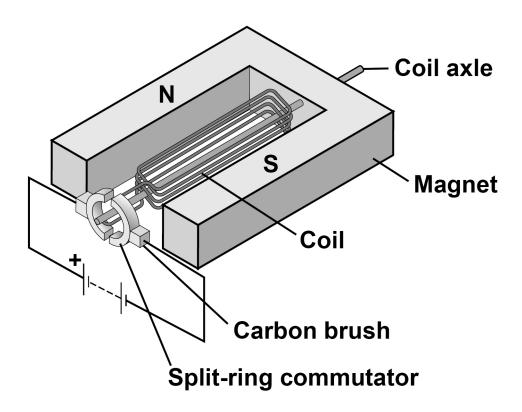

Current =	Δ

0 4.4 FIGURE 7 shows a simple motor.

FIGURE 7

Explain why the coil rotates when there is a current in the coil. [4 marks]

FIGURE 8 shows some springs inside a mattress.

FIGURE 8

05.1	Which proportionality is true when a force is applied to a spring? [1 mark]			
	Tick (✓) ONE box.			
	Force ∝ energy stored			
	Force ∝ extension			
	Force ∝ length			
	Force ∝ spring constant			

BLANK PAGE

A mattress contains 1200 identical springs.

	A person lies on the mattress and the springs compress.
	The mean force on each spring in the mattress is 0.49 N
0 5.2	Calculate the mass of the person.
	gravitational field strength = 9.8 N/kg
	[4 marks]

Mass =	kg	

05.3	The mean compression of each spring is 3.5×10^{-3} m
	Calculate the spring constant of each spring in the mattress.
	Give the unit. [4 marks]
	Spring constant =
	Unit =

05.4	For a given force, different springs compress by different amounts.				
	Explain what property of the springs would make the mattress soft. [2 marks]				
[Turn over	r] <u>[11]</u>				

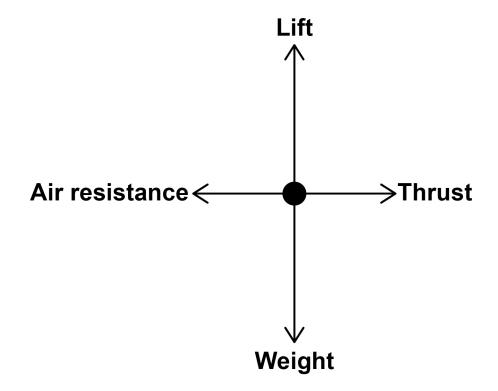

0 6

FIGURE 9 shows a free body diagram for an aeroplane flying at a constant speed and at a constant height.

The speed of the aeroplane is much greater than the speed at which the aeroplane lands.

FIGURE 9

06.1	Explain how the forces need to change so the aeroplane can land. [4 marks]

06.2	The aeroplane lands at a speed of 80 m/s
	After landing, the aeroplane takes 28 s to decelerate to a speed of 10 m/s
	The mean resultant force on the aeroplane as it decelerates is 750 000 N
	Calculate the mass of the aeroplane. [5 marks]

	Mass =	kg	
[Turn ov	/er]		9

Wave front diagrams are used to explain why light refracts when it passes from air into glass.

FIGURE 10

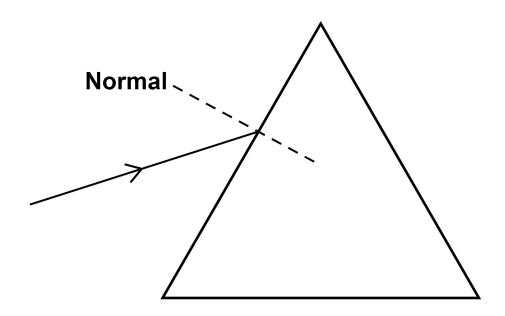

07.1	Explain why the light refracts as it passes from air into glass. [3 marks]		

07.2 FIGURE 11 shows a ray of red light entering a glass prism.

FIGURE 11

Complete the ray diagram to show the ray emerging from the glass prism. [3 marks]

BLANK PAGE

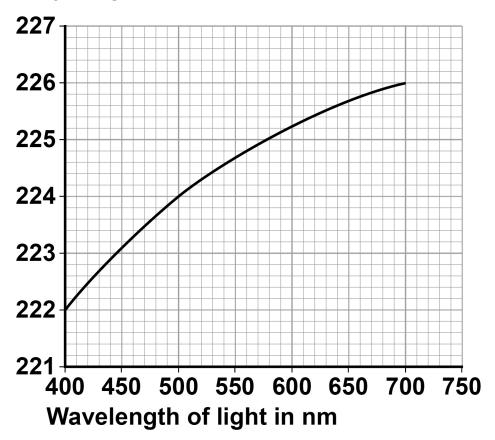

0 7.3 White light is made up of a continuous spectrum of different wavelengths that all travel at 3 × 10⁸ m/s in air.

Rainbows are produced because different wavelengths of light travel at different speeds in water.

FIGURE 12 shows the speed of different wavelengths of light in water.

FIGURE 12

Speed of light in water × 10⁶ m/s

as it enters water. [3 marks]
