Paper 1 How markets work

8136/1

Friday 24 May 2019

Afternoon

Time allowed: 1 hour 45 minutes

At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature

[Turn over]

**You will need no other materials.
You may use a calculator.**

INSTRUCTIONS

- **Use black ink or black ball-point pen.**
- **Answer ALL questions.**
- **You must answer the questions in the spaces provided. Do not write on blank pages.**
- **Do all rough work in this book. Cross through any work you do not want to be marked.**

INFORMATION

- **The marks for questions are shown in brackets.**
- **The maximum mark for this paper is 80.**
- **Questions should be answered in continuous prose. You will be assessed on your ability to:**
 - **use good English**
 - **organise information clearly**
 - **use specialist vocabulary where appropriate.**

DO NOT TURN OVER UNTIL TOLD TO DO SO

SECTION A

Answer ALL questions in the spaces provided.

For questions with four responses, only ONE answer per question is allowed.

For each question completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

If you want to change your answer you must cross out your original answer as shown.

5

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

FIGURE 1

Ten years after the global financial crisis, the United Kingdom (UK) building industry seems to be recovering. House-building projects that had stopped because of fears about profitability have now been re-started. New building projects have also begun as consumer incomes have started to increase. The UK government announced a plan in 2017 to build 300 000 new homes a year to try to solve the problems of a housing shortage in the UK. This should be good news for workers involved in the building industry.

However, the UK still suffers from difficulties linked to planning and building regulations. These limit the ability of house-builders to develop new land for homes. The skills of bricklayers

and plasterers are still in high demand but there are fears that certain manual jobs may be carried out by machines in the future. Added to this are concerns that the UK's exit from the European Union may lower consumer and business confidence again.

SECTION B

Answer ALL questions in the spaces provided.

ITEM A – Coffee cup waste

UK consumers use 2.5 billion disposable coffee cups every year. Very few are recycled, partly because it is currently difficult and expensive to separate the materials that make up a disposable cup. Half a million cups a day end up as litter. One estimate of the cost of cleaning up this extra litter is £6 million a year. Coffee cup producers have not yet taken enough action to solve this problem. As the UK's coffee shop market is expanding rapidly, economists say that solutions are needed to address the failures in this market.

Politicians point out that while some coffee shops offer discounts for

consumers who bring their own coffee cups, only 1-2% of coffee drinkers bring their own cups. Following the success of the plastic bag charge, politicians conclude that consumers respond more to taxes than discounts. Politicians say that a 5p charge for plastic shopping bags has massively reduced their use and helped protect the environment. The UK government is therefore recommending a 25p tax on disposable coffee cups, known as a 'latte levy'. However, the tax is opposed by makers of paper cups, who argue that paper cups are a safe and sustainable solution, as they are made from recyclable materials. They say that 'Taxing the morning coffee run will not address the issue of litter but it will hurt consumers and impact already struggling High Streets'. Some politicians have suggested a total ban on disposable cups by 2023.

[Turn over]

Several of the UK's main coffee suppliers including Caffe Nero, Costa, McDonald's and Starbucks have signed up to a scheme to collect and recycle more of the current type of cups. Starbucks said it would try out a 5p cup charge in a number of London coffee shops.

Critics say that the coffee industry should focus on other environmental issues such as cutting water use, carbon reduction and turning waste coffee products into biofuel.

ITEM B – The UK coffee shop market

The UK coffee shop market is dominated by a small number of powerful firms, with the biggest three accounting for 53% of all coffee shops. Costa is the largest chain, with over 2200 coffee shops in the UK in 2017.

Whilst each chain largely offers a similar product range of hot and cold drinks, sandwiches and snacks, each tries to offer consumers a distinctive experience.

**TABLE 4 –
Sales revenue of four largest coffee shop chains in UK (2017)**

COFFEE SHOP	SALES REVENUE (£bn)
Costa	1.5
Starbucks	1.0
Caffe Nero	0.8
Wild Bean Cafe	0.2
TOTAL of all coffee shops	7.3
