Paper 1 Inorganic and Physical Chemistry

## 7405/1

## Tuesday 2 June 2020 <br> Afternoon

Time allowed: 2 hours
At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.
[Turn over]

## BLANK PAGE

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

## INSTRUCTIONS

- Use black ink or black ball-point pen.
- Answer ALL questions.
- You must answer the questions in the spaces provided. Do NOT write on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

## INFORMATION

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 105.

Answer ALL questions in the spaces provided.

| 0 | 1 |

## BLANK PAGE

[Turn over]

| 0 | 8 | A student does an experiment to determine |
| :--- | :--- | :--- | the percentage by mass of sodium chlorate(I), NaClO , in a sample of bleach solution.

Method:

- Dilute a $10.0 \mathbf{~ c m}^{3}$ sample of bleach solution to $100 \mathrm{~cm}^{\mathbf{3}}$ with distilled water.
- Transfer $25.0 \mathrm{~cm}^{3}$ of the diluted bleach solution to a conical flask and acidify using sulfuric acid.
- Add excess potassium iodide to the conical flask to form a brown solution containing $\mathrm{I}_{2}(\mathrm{aq})$.
- Add $0.100 \mathrm{~mol} \mathrm{dm}^{-3}$ sodium thiosulfate solution $\left(\mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3}\right)$ to the conical flask from a burette until the brown solution containing $\mathrm{I}_{2}(\mathrm{aq})$ becomes a colourless solution containing $\mathrm{I}^{-}(\mathrm{aq})$.

The student uses $33.50 \mathrm{~cm}^{3}$ of sodium thiosulfate solution.

The density of the original bleach solution is $1.20 \mathrm{~g} \mathrm{~cm}^{-3}$
The equations for the reactions in this experiment are $\mathrm{ClO}^{-}(\mathrm{aq})+2 \mathrm{H}^{+}(\mathrm{aq})+2 \mathrm{I}^{-}(\mathrm{aq}) \rightarrow \mathrm{Cl}^{-}(\mathrm{aq})+\mathrm{H}_{2} \mathrm{O}(\mathrm{I})+\mathrm{I}_{2}(\mathrm{aq})$
$2 \mathrm{~S}_{2} \mathrm{O}_{3}{ }^{2-}(\mathrm{aq})+\mathrm{I}_{2}(\mathrm{aq}) \longrightarrow 2 \mathrm{I}^{-}(\mathrm{aq})+\mathrm{S}_{4} \mathrm{O}_{6}{ }^{2-}(\mathrm{aq})$

| 0 | 8. | 1 |
| :--- | :--- | :--- | Use all the information given to calculate the percentage by mass of NaClO in the original bleach solution.

Give your answer to 3 significant figures. [7 marks]

## Percentage by mass
