Biology

Unit 1

Foundation Tier

[GBY11]

WEDNESDAY 5 JUNE, AFTERNOON

GBY11

TIME

1 hour 15 minutes.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

You must answer the questions in the spaces provided. Do not write outside the box, around each page or on blank pages.

Complete in blue or black ink only. **Do not write with a gel pen**. Answer **all twelve** questions.

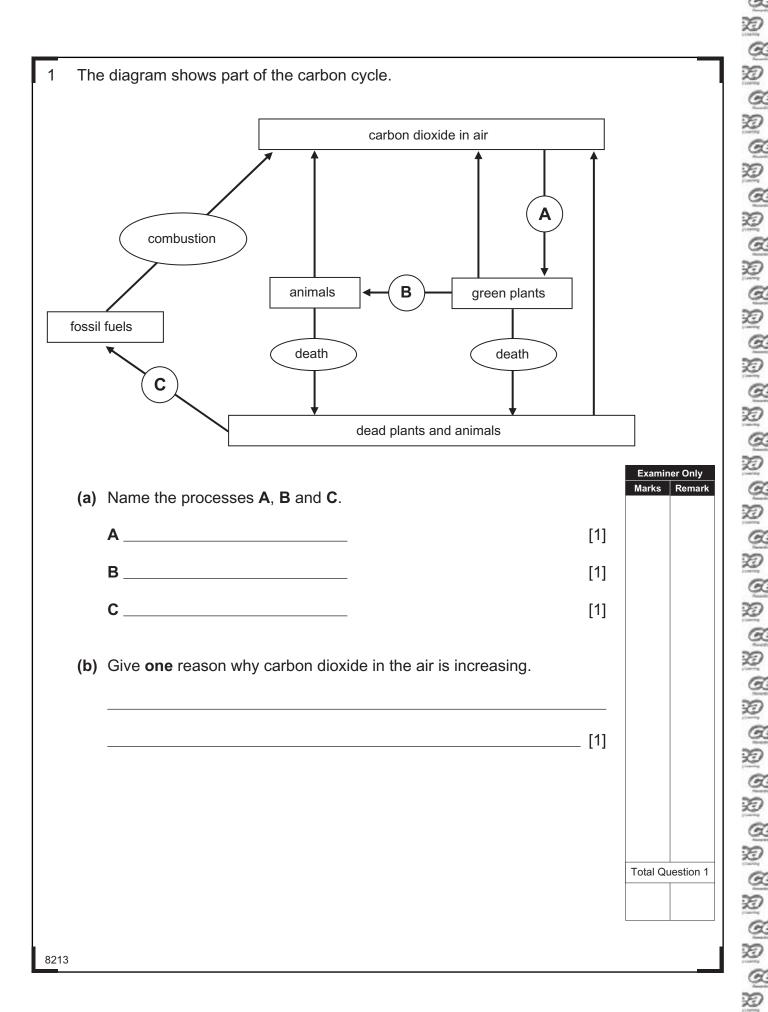

INFORMATION FOR CANDIDATES

The total mark for this paper is **80**.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Quality of written communication will be assessed in questions 4 and 12.

3 A Petri dish was filled with agar jelly containing blue DCPIP. Examiner Only Marks Remark Three holes were cut out of the agar jelly. One hole was filled with 1 cm³ of water, one with 1 cm³ of fruit juice **X** and one with 1 cm³ of fruit juice Y. The fruit juices contained different concentrations of vitamin C. The Petri dish was left for 60 minutes. Start After 60 minutes agar jelly containing water blue DCPIP clear agar fruit juice X fruit juice Y jelly Use the results found after 60 minutes to help answer the following questions. (a) (i) What conclusion can be drawn about the concentration of vitamin C in fruit juice Y compared to fruit juice X? (ii) How did you reach this conclusion?

Salmonella bacteria can cause food poisoning.

Some probiotic drinks contain living bacteria.

Manufacturers claim these can help reduce the risk of Salmonella food poisoning.

The diagrams show a section through the ileum of a person who does not take probiotic drinks and one who does.

(c) Use evidence from the diagrams to describe and explain two ways probiotics may help reduce the number of Salmonella bacteria in the ileum.
