

www.papacambridge.com MARK SCHEME for the May/June 2007 guestion paper

9700 BIOLOGY

9700/04

Paper 4 (A2 Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2007 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Page 2		Syllabus er
	GCE A/AS LEVEL – May/June 2007	9700 23
ection A		camp.
to b 2. v 3. s 4. h	killed / hunted, qualified ; e.g. for meat / for fur / blood s be dangerous A poaching (unqualified) war ; sale of live young ; nabitat destruction / AW ;	Syllabus 9700 Port / takes human food / thous
	oss of / competition for food ; AVP ; e.g. disease	[3 max]
(b) (i)	 fewer animals need to be caught (for zoos); ref. becoming pregnant; e.g. IVF / finding a mate reintroduction into the wild; research easier with captive animals / AW; ref. increase in numbers; ante or postnatal care; 	[3 max]
(ii)	 inbreeding / AW ; gene pool too small ; no fear of humans / difficulty in socialising with other difficulty in, finding food / reproducing ; ref. transfer of pathogens ; ref. effects of captivity ; e.g. stress 	er gorillas ; [2 max]
	o. rei. enecis of captivity, e.g. sitess	[Z IIIdX
		[Total: 8]

process	major products
glycolysis	ATP ; pyruvate ; reduced NAD ;
Krebs cycle	ATP ; reduced NAD / reduced FAD; CO ₂ ;
oxidative phosphorylation	ATP ; water ; NAD / FAD ;

R NADP throughout

			GCE A/AS LEVEL – May/June 2007	9700	Day 1
(mał fron <i>DN/</i>	erse transcriptase kes, cDNA / single strand of DNA ; n (human) mRNA ; A <i>polymerase</i> duces, second strand of DNA / double stranded DNA ;		pa Cambrios
		ref. ref. <i>rest</i> cut	links nucleotides (in context of backbone formation) ; semiconservative replication / ref. complementary base pairing ; <i>triction enzymes</i> DNA / cut plasmid ; R cuts gene A cuts out gene	; [max 2]	
		to g	pecific sites / at palindromic sites ; ive sticky ends ; A blunt ends A <i>ligase</i>	[max 2]	
		sea forn	ls nicks in sugar-phosphate backbone ; ns_rDNA_;		
		by a	adding phosphate group;	[max 2]	[6 max]
					[Total: 10]
(a)	(i)	air spaces (between cells) / aerenchyma ; in mesophyll / cortex;		
			formed by cell death ;		[2 max]
		(ii)	provides oxygen ; for aerobic respiration / because conditions are anaerobic ; ref. diffusion ;		
			AVP ; e.g. allows escape of ethene / buoyancy / active transpor	rt	[2 max]
(b)	(i)	internode length increases as water depth increases ; use of figures ; (2 days) 2 depths + 2 lengths ignore units		[2]
		(ii)	part of plant is (always) above water ; access to light ;		
			access to, air / oxygen / carbon dioxide ; ref. pollination / flowering ;		[2 max]
	(iii)	ethene concentration increases up to 30 or 40 cm water depth ; fluctuation / plateau between 30 or 40 cm to 60 cm water depth comparison between when water level is constant and when wa	;	ases ; [2]
(c)	(i)	substance that affects growth / development ;		[1]
		(ii)	 gibberellin causes increase in stem length ; detail of mechanism ; e.g. cell elongation gibberellin has greater effect with ethene present ; more gibberellin could be secreted as water depth increases gibberellin could remain constant but have greater effect bec secreted ; 		iene
			6. more gibberellin could be transported through plant as water7. AVP ;	depth increas	es ; [3 max]
					[Total: 14]

Section B

- 9 (a) 1. action potential / depolarisation, reaches presynaptic membrane ;
 - 2. calcium (ion) channels open / presynaptic membrane becomes more permeable to Ca^{2+} ;
 - 3. Ca^{2+} flood into presynaptic neurone ; **R** membrane
 - 4. this causes vesicles of (neuro)transmitter to move towards presynaptic membrane ;
 - 5. ref. acetylcholine / ACh ;
 - 6. vesicle fuses with presynaptic membrane / exocytosis ;
 - 7. ACh released into synaptic cleft;
 - 8. ACh diffuses across (cleft);
 - 9. ACh binds to receptor (proteins) / AW ;
 - 10. on postsynaptic membrane ; R neurone
 - 11. proteins change shape / channels open ;
 - 12. sodium ions rush into postsynaptic neurone ; R membrane
 - 13. postsynaptic membrane depolarised ;
 - 14. action potential / nerve impulse ;
 - 15. AVP ; e.g. action of acetylcholinesterase
