UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS GCE Advanced Subsidiary Level and GCE Advanced Level

www.papacambridge.com MARK SCHEME for the October/November 2011 question paper

for the guidance of teachers

9700 BIOLOGY

9700/53

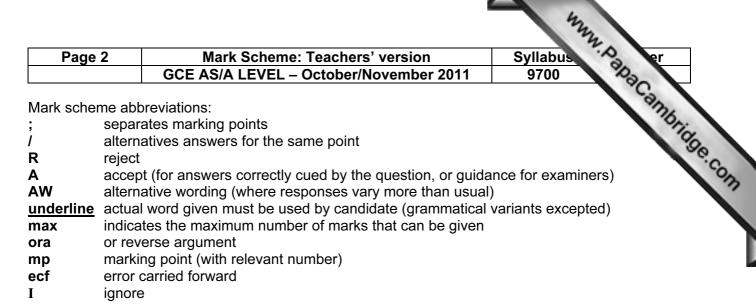

Paper 5 (Planning, Analysis and Evaluation), maximum raw mark 30

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

AVP alternative valid point (examples given as guidance)

Paper

www.papaCambridge.com 9700 53 Question **Expected** answer Extra guidance (d) (i) 7 of: Some points might be gained from a diagram e.g. mp 8. independent variable: 1. ref. to using (a sample from) all three leaves ; 2. ref to same quantity / amount of each (leaf type) : 2. A in terms of mass or number ecf if only two leaf types mentioned dependent variable: 3. ref. to observing / measuring / marking / finding, 3. A if refer to Rf values or measure distance to the pigments. position of the pigments / colours / spots (on the A pattern for position chromatogram); A results for pigments, etc. procedure: 4. ref. to a method of extracting pigments (from the e.g. grind / crush / AW, leaves (separately or with solvent) / use a blender. leaves); A crushing directly onto paper A boil / heat in ethanol / alcohol / solvent

- ref. to filtering / centrifuging to, remove debris / obtain pigments ;
- ref. to method of concentrating extract ; 6.
- 7. ref. to a method of applying sample ;

5.

Page 5

- ref. to suitable placing in solvent ; 8
- 9. ref. to using the same solvent (if separate chromatograms) / spots at same level if all on one paper:
- 10. ref. to running (chromatograms) to a set distance ;
- 11. ref. to covering container (prevents evaporation);

6. e.g. by evaporating heating, partitioning with different solvents or (many spots) at the same point or pressing with a coin several times

Paper

Syllabus

- 7. e.g. capillary tube / fine or small dropper / small or fine paint brush / pin head A ref to keeping spot small / thin line on origin
- 8. e.g. solvent level below, sample / origin ignore names of solvents

5. A 'extract' / supernatant, for pigments

- ignore names of solvents including water, but must use 9. water as a solvent for all chromatograms
- 10. e.g. before solvent front reaches the end / pre-marked line. A running for same times for 2 or more chromatograms but not if all on one, ignore any specific time
- 11. A airtight container. close with a stopper / cork

	Page 6	Mark Scheme: Teache GCE AS/A LEVEL – October		Syllabus 9700	Paper 53	. Par	200
Question	Expe	ected answer		Extra guid	ance		annb.
	safety (max 1): 13. ref. to solvents / leav	. to repeating to, compare / find anomalies ; A means of Rf values / AW					[max 7]
(ii)	yellow leaf does not have	ot present the other two leaves) ; e pigment 5 (found in the other	ora pigment 5 ignore ref. to p	-	green and white	e leaf	101
	two leaves) ;					Total:	[2] [20]

offspring without tail

72

84;

 $\gamma^2 =$

2

Mark Scheme: Teachers' version **Syllabus** 9700

1 mark correct addition to χ^2 to **2 decimal** places

ecf from column $\frac{(O-E)^2}{E}$

Paper

53

[3]

www.papaCambridge.com Question **Expected** answer Extra guidance (a) 3 of: cross 1. offspring of cats 'without tails' (dominant) A cross 1 – always more without tails / AW (i) crossed together have offspring with tails' (recessive) : cross 2. offspring of cats 'with tails' (recessive) crossed A ora 'none without tails' together are always 'with tails' (recessive); must have idea that ratio is between male and female not iust idea of 'with tails' (recessive) and 'without tail' (dominant) (ii) phenotypes occur in (approximately) equal numbers in that there are the same number (approximately) of 'tail' to each sex / 1:1 ratio in each sex / 1:1:1:1 / AW : without tail unqualified as this seems to imply regardless of gender. 1:1:1:1 implies gender so does not need gualifying. Could apply to either cross 3 or 4 a male 'without tail' cannot pass this allele to the male offspring cross 4: male 'without tail' (dominant) and female 'with tail' (recessive). If it were sex linked all males would be if it is sex linked [max 3] tailed. (This is not so), so not sex linked / AW ; (b) (i) 1 of: A discontinuous data / discontinuous distribution / not the data is categoric / discrete : continuous looking for a 'goodness of fit' / idea of whether expected R discontinuous variation and observed results match or not / whether there is a R stating there are O and E values, must have idea of significant difference between the expected and observed matching ratios (of offspring) Ignore ref. to null hypothesis [max 1] results ; (ii) 1 mark E column $(O - E)^2$ 1 mark $\frac{(O-E)^2}{E}$ column. *ecf from E* Е offspring phenotype 0 Е offspring with tail 5.14 40 28 A as fractions ignore decimal places
