Paper 4 Written Paper May/June 2018

MARK SCHEME
Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2018 series for most Cambridge IGCSE™, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

IGCSE™ is a registered trademark.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- · marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

© UCLES 2018 Page 2 of 21

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

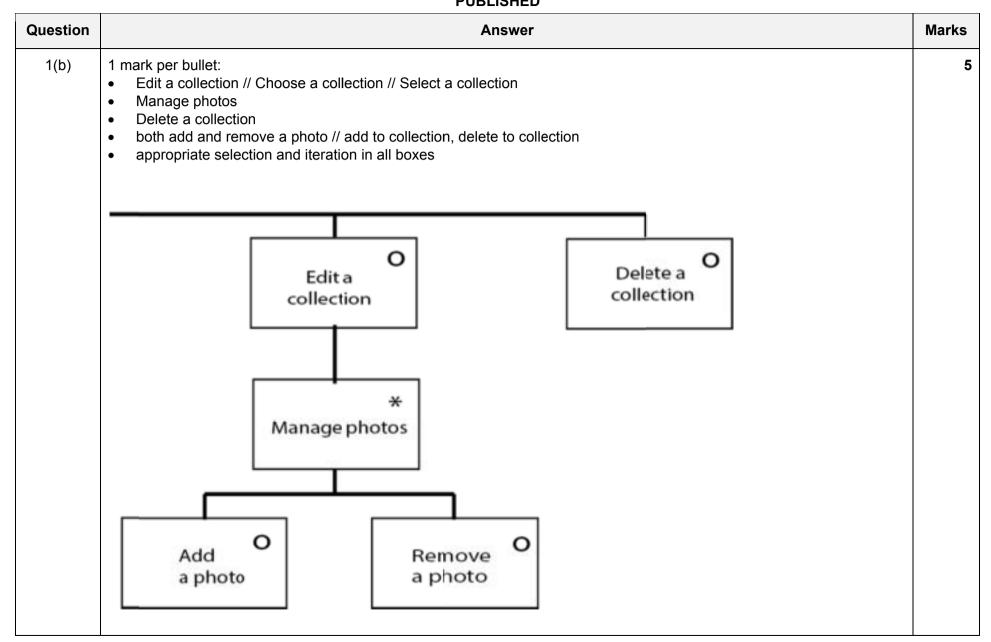

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
2(a)	1 mark for each statement	2
	15 is_a(gecko, lizard). 16 maxsize(gecko, 182).	
2(b)	1 mark for 2 results 2 marks for 3 correct results	2
	green_iguana, cayman, smooth_iguana	
2(c)	1 mark per bullet	2
	is_a used with brackets ()squamata, X in correct order	
	is_a(squamata, X).	
2(d)	1 mark for each bullet to max 3	3
	is_a(X, Z)and // , has(Z, Y).	
	is_a(X, Z) AND has(Z, Y).	
2(e)	YES	1

Question	Answer	Marks
4(b)	1 mark per bullet to max 5	5
	 class declaration FirstName, LastName, DateOfBirth and Gender all defined as private 	
	 constructor declaration all four attributes assigned values from parameters 	
	 (Public) method for Introduction outputs message with FirstName and LastName attributes // returns FirstName and LastName 	
	 Public method for DisplayFullNameAndDateofbirth outputs message with FirstName, LastName and DateOfBirth // returns FirstName, LastName, DateOfBirth 	
	Python example code:	
	class Member:	
	<pre>definit(self, Fname, Lname, DOB, GenderVal): selfFirstName = Fname selfLastName = Lname selfDateOfBirth = DOB selfGender = GenderVal</pre>	
	<pre>def Introduction(self): return "Hello, I am ", selfFirstName, " ",</pre>	
	<pre>def DisplayFullnameAndDateofbirth(self): print selfFirstName, selfLastName,</pre>

Question	Answer	Marks
5(a)	 C/D/E in parallel starting after B, with correct durations. F with dependency on C and correct duration G with dependency on D and E with correct duration H with correct dependency on F and G I with dependency on H 	5
	A B B B B B B B B B B B B B B B B B B B	
5(b)(i)	C, D, E	1
5(b)(ii)	E, F	1

© UCLES 2018 Page 17 of 21

Question	Answer	Marks
5(c)	1 mark per bullet to max 2	2
	For example:	
	 Check if the project is on track so the project manager can intervene if behind lets you identify slack time to reallocate resources to support the process find critical path to ensure activities are given correct priority see when tasks end to plan the next tasks see which tasks can run in parallel set milestones/goals check correct tasks are being carried out on current day Calculate latest start time Calculate earliest finish time Calculate latest start time for a task 	

© UCLES 2018 Page 18 of 21

Question	Answer	Marks
6(a)	1 mark per bullet	5
	 Brown left and black right from node 2 Yellow left and Purple right from node 1 Peach left comes from 3 White left from 6 and Pink left from 7 Grey left from 9 and orange right from 9 	
	0 "Red" 1 2	
	1 'Blue" 6 7	
	6 "Yellow" 8 7 "Purple" 9 4 "Brown" 3 "Black" 5	
	8 "White" 9 "Pink" 10 11 5 "Peach"	
	10 "Grey" 11 "Orange	

© UCLES 2018 Page 19 of 21

Question	Answer	Marks
6(b)	1 mark for outputting all the leaf data values	8
	Outputting BinaryTree[CurrentNode].DataValue only when both LeftPointer and RightPointer are -1	
	1 mark per bullet to max 7	
	 Function declaration taking CurrentNode or equivalent as parameter 	
	 Check if BinaryTree[CurrentNode].LeftPointer is not -1 recursive call with left pointer value as parameter 	
	 Check if BinaryTree[CurrentNode].RightPointer is not -1 recursive call with right pointer value as parameter 	
	Python example code:	
	<pre>def FindLeaves(CurrentNode): global BinaryTree if(BinaryTree[CurrentNode].LeftPointer != -1): FindLeaves(BinaryTree[CurrentNode].LeftPointer)</pre>	
	<pre>if (BinaryTree[CurrentNode].RightPointer != -1): FindLeaves(BinaryTree[CurrentNode].RightPointer)</pre>	
	<pre>if((BinaryTree[CurrentNode].RightPointer == -1) and</pre>	

© UCLES 2018 Page 20 of 21

Question	Answer	Marks
6(b)	Visual Basic example code:	
	Procedure FindLeaves (CurrentNode):	
	<pre>if (BinaryTree[CurrentNode].LeftPointer <> -1) then FindLeaves (BinaryTree[CurrentNode].LeftPointer) End if if (BinaryTree[CurrentNode].RightPointer <> -1) then FindLeaves (BinaryTree[CurrentNode].RightPointer) end if if ((BinaryTree[CurrentNode].RightPointer = -1) and</pre>	
	Pascal example code:	
	<pre>Procedure FindLeaves(CurrentNode); Begin if(BinaryTree[CurrentNode].LeftPointer <> -1) then FindLeaves(BinaryTree[CurrentNode].LeftPointer); if(BinaryTree[CurrentNode].RightPointer <> -1): FindLeaves(BinaryTree[CurrentNode].RightPointer); if((BinaryTree[CurrentNode].RightPointer = -1) and (BinaryTree[CurrentNode].LeftPointer = -1)) then print (BinaryTree[CurrentNode].DataValue); End;</pre>
