MARK SCHEME
Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2018 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

Cambridge International AS/A Level – Mark Scheme

PUBLISHED

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

© UCLES 2018 Page 2 of 18

GENERIC MARKING PRINCIPLE 5:

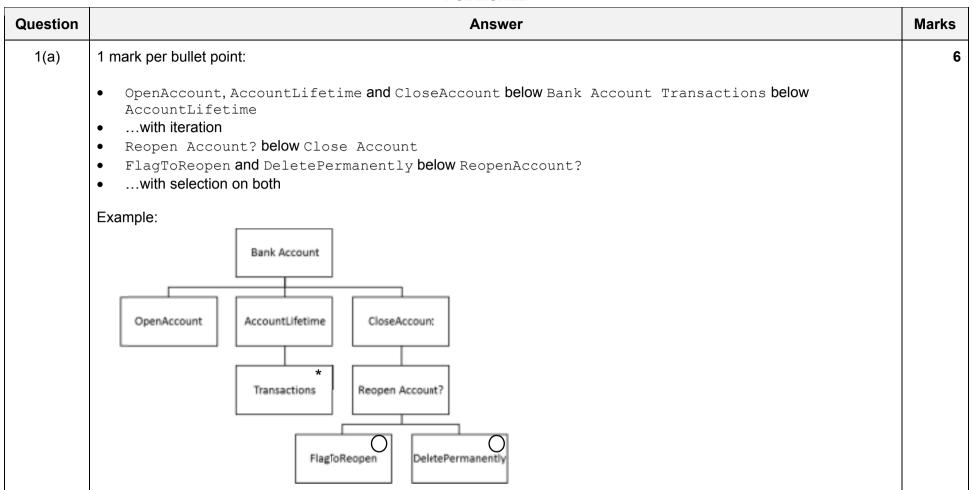

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

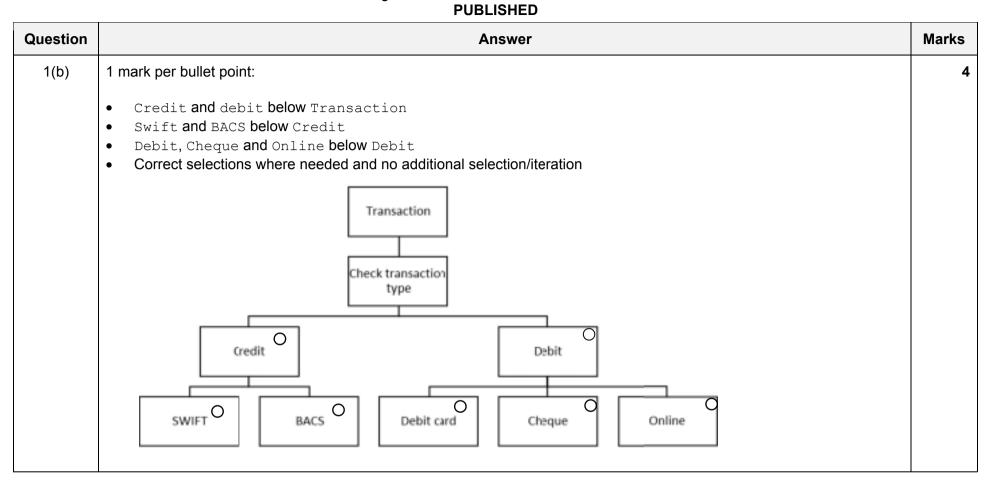

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer									
2(a)	mark for each fact:									
	18 type(waterdog, gundog). 19 is_a(standardpoodle, waterdog).									
2(b)	1 mark for each result:	2								
	H = english_setter, irish_setter									

© UCLES 2018 Page 5 of 18

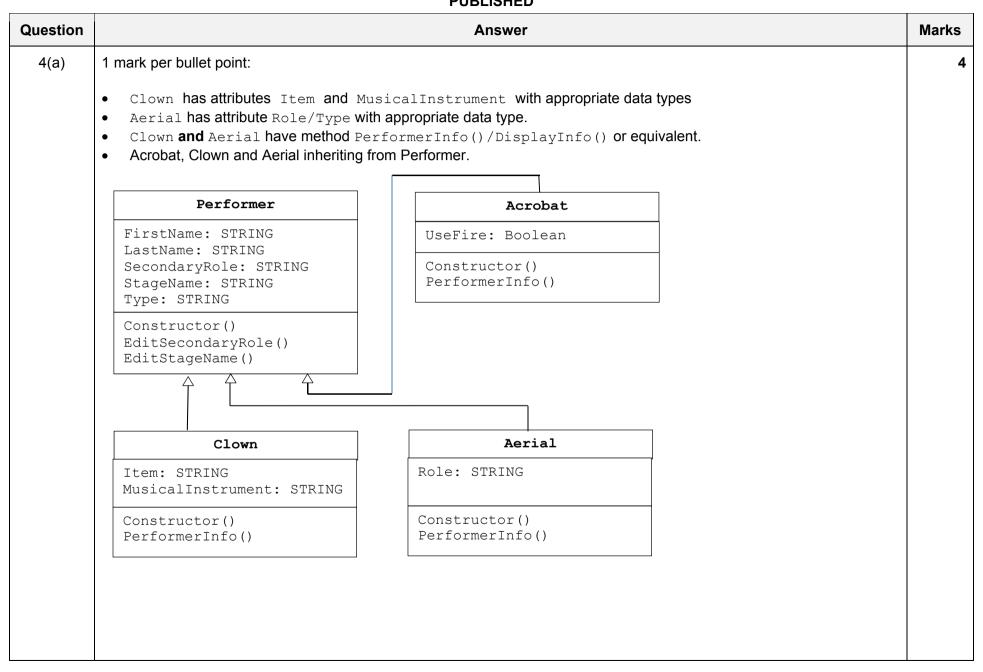

Question	Answer	Marks
2(c)	1 mark per bullet point to max 2:	2
	is_a(irish_setter, W)is_a(irish_setter, W)	
2(d)	1 mark per bullet point to max 3:	3
	 is_a(X,Z) AND fav_bird(Z, Y). 	
	<pre>fav_bird(X, Y) IF is_a(X, Z) AND fav_bird(Z, Y).</pre>	
2(e)	NO	1

Question	Answer							
3(a)	1 mark for each completed statement:							
	<pre>01 FOR Outer ← LENGTH(List)-1 TO 0 STEP -1 02 FOR Inner ← 0 TO (Outer - 1) 03 IF List[Inner] > List[Inner + 1] 04 THEN 05 Temp ← List[Inner] 06 List[Inner] ← List[Inner + 1] 07 List[Inner + 1] ← Temp 08 ENDIF 09 ENDFOR 10 ENDFOR</pre>							
3(b)(i)	Ascending (must match answer to 3(a)	1						

© UCLES 2018 Page 6 of 18

Question	Answer	Marks
3(b)(ii)	Line 03 Change the operator in the IF statement to < or <= rather than >	1
3(c)	1 mark per bullet	4
	 Use of a (Boolean) flag Remainder of bubble correct Set flag when a swap has been made Loop until a swap has not been made and then exit all loops 	
	Outer ← LENGTH(List)-1 REPEAT	
	Inner ← 0	
	Swap ← FALSE	
	REPEAT	
	<pre>IF List[Inner] > List[Inner + 1] THEN</pre>	
	Temp ← List[Inner]	
	List[Inner] ← List[Inner + 1]	
	List[Inner + 1] ← Temp	
	Swap = TRUE	
	ENDIF	
	Inner ← Inner + 1	
	UNTIL Inner = Outer - 1	
	Outer ← Outer - 1	
	UNTIL Swap = FALSE OR Outer = 0

Question	Answer	Marks
4(b)	1 mark per bullet point to max 5:	5
	 1 mark per bullet to max 4: class declaration (and end where applicable) declaring five attributes as private (with string data types where applicable) (language specific) constructor method (and end where applicable) with five parameters initialising five attributes using parameters 	
	 1 mark per bullet to max 3: procedure header (and close) for EditSecondaryRole // procedure header (and close) for EditStageName takes parameter EditSecondaryRole replaces SecondaryRole with parameter EditStageName replaces StageName with parameter 	
	Example Python :	
	<pre>class Performer(object):</pre>	
	<pre>definit(self, Firstname, Lastname, Stagename, SecondaryRole, Type): selfFirstName = Firstname selfLastName = Lastname selfStageName = Stagename selfSecondaryRole = SecondaryRole selfPerfType = Type</pre>	
	<pre>def EditSecondaryRole(self, NewRole): self.SecondaryRole = NewRole</pre>	
	<pre>def EditStageName(self, NewStageName): self.StageName = NewStageName</pre>

Question	Answer	Marks
4(c)	1 mark per bullet point to max 8:	8
	class declaration with inheritance from Performer	
	constructor taking five or six parameters	
	call to inherited constructor	
	sending either five parameters or four with "Acrobat"	
	• UseFire declared as private Boolean	
	• In constructor, storing value in UseFire from parameter	
	 PerformerInfo header (and end where applicable) without any parameters 	
	outputs / returns	
	• StageName & " (real name " & FirstName & " " & SecondName & ") is an acrobat"	
	 "Fire is part of " & StageName & "'s act." ONLY printed when Fire is TRUE	
	• "When not performing, " & StageName & " is a " & SecondaryRole	
	Example Python:	
	<pre>class Acrobat(Performer):</pre>	
	<pre>definit(self,Firstname, Lastname, Stagename, SecondaryRole, Fire): Performerinit(self, Firstname, Lastname, Stagename, SecondaryRole, "Acrobat")</pre>	
	selfUseFire = Fire	
	<pre>def PerformerInfo(self):</pre>	
	ReturnString = "%s (real name %s %s) is %s. " % (self. Stagename, self.Firstname,	
	self. Lastname, Acrobat.PerfType)	
	if(selfUseFire):	
	ReturnString = ReturnString + "Fire is part of %s's act. " % (self.Stagename) else:	
	ReturnString = ReturnString + "Fire is not part of %s's act. " %	
	(self.Stagename)	
	ReturnString = ReturnString + "When not performing, %s is a %s" % (self.Stagename, self.SecondaryRole)	
	return ReturnString

Question	Answer								
5(c)(ii)	1 mark per bullet point to max 2:	2							
	Example:								
	 If there is any delay to a task which is part of the critical path then the overall project will be delayed Gives the earliest possible completion time this allows you to organise/allocate resources (efficiently) Frequently recalculate the critical path to see if there are any delays/new critical path has arisen Can identify where there is slack in activities so they can start later without affecting the critical path 								

Question	Answer	Marks
6(a)(i)	1 mark per bullet point:	3
	 Declaring a record type // class etc. Declaring Country as a string Declaring Pointer as an integer 	
	Example:	
	TYPE ListElement DECLARE Country: STRING DECLARE Pointer: INTEGER ENDTYPE
