Paper 4 Mechanics

For examination from 2020

SPECIMEN PAPER

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.
- Where a numerical value for the acceleration due to gravity (g) is needed, use 10 ms^{-2} .

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **14** pages. Blank pages are indicated.

- 1 A particle P is projected vertically upwards with speed 20 m s^{-1} from a point on the ground.

(a) Find the greatest height above the ground reached by P .

2 A constant resistance of magnitude 1350 N acts on a car of mass 1200 kg.

- (a) The car is moving along a straight level road at a constant speed of 32 m s^{-1} .

Find, in kW, the rate at which the engine of the car is working.

[2]

- (b) The car travels at a constant speed down a hill inclined at an angle of θ° to the horizontal, where $\sin \theta^\circ = \frac{1}{20}$, with the engine working at 31.5 kW.

Find the speed of the car.

[3]

- 3 Three small smooth spheres A , B and C of equal radii and of masses 4 kg, 2 kg and 3 kg respectively, lie in that order in a straight line on a smooth horizontal plane. Initially, B and C are at rest and A is moving towards B with speed 6 m s^{-1} . After the collision with B , sphere A continues to move in the same direction but with speed 2 m s^{-1} .

(a) Find the speed of B after this collision.

Sphere B collides with C . In this collision these two spheres coalesce to form an object D .

(b) Find the speed of D after this collision.

- (c) Show that the total loss of kinetic energy in the system due to the two collisions is 38.4 J. [2]

- 4 A particle of mass 20 kg is on a rough plane inclined at an angle of 30° to the horizontal. A force of magnitude 25 N, acting at an angle of 20° above a line of greatest slope of the plane, is used to prevent the particle from sliding down the plane. The coefficient of friction between the particle and the plane is μ .

(a) Complete the diagram below to show all the forces acting on the particle.

[1]

(b) Find the least possible value of μ .

- 5 A car of mass 1200 kg is pulling a trailer of mass 800 kg up a hill inclined at an angle of $\sin^{-1}(0.1)$ to the horizontal. The car and the trailer are connected by a light rigid tow-bar which is parallel to the road. The driving force of the car's engine is 2500 N and the resistances to the car and trailer are 300 N and 100 N respectively.

(a) Find the acceleration of the system and the tension in the tow-bar.

[4]

- (b)** When the car and trailer are travelling at a speed of 30 m s^{-1} , the driving force becomes zero.

Find the time, in seconds, before the system comes to rest and the force in the tow-bar during this time. [5]

- 6 A particle P moves in a straight line. The velocity $v \text{ ms}^{-1}$ at time $t \text{ s}$ is given by

$$\begin{aligned}v &= 5t(t - 2) && \text{for } 0 \leq t \leq 4, \\v &= k && \text{for } 4 \leq t \leq 14, \\v &= 68 - 2t && \text{for } 14 \leq t \leq 20,\end{aligned}$$

where k is a constant.

- (a) Find k .

[1]

.....
.....
.....
.....
.....

- (b) Sketch the velocity–time graph for $0 \leq t \leq 20$.

[3]

- (c) Find the set of values of t for which the acceleration of P is positive.

[2]

.....
.....
.....
.....
.....
.....

- (d) Find the total distance travelled by P in the interval $0 \leq t \leq 20$.

[5]

Two particles *A* and *B*, of masses 0.8 kg and 0.2 kg respectively, are connected by a light inextensible string. Particle *A* is placed on a horizontal surface. The string passes over a small smooth pulley *P* fixed at the edge of the surface, and *B* hangs freely. The horizontal section of the string, *AP*, is of length 2.5 m (see diagram). The particles are released from rest with both sections of the string taut.

- (a) Given that the surface is smooth, find the time taken for *A* to reach the pulley.
