

- (b) Find the exact coordinates of the point on the curve where the tangent is parallel to the y-axis. [4]

3. Nov/2021/Paper_9709/32/No.11(a), (b)

The equation of a curve is $y = \sqrt{\tan x}$, for $0 \leq x < \frac{1}{2}\pi$.

- (a) Express $\frac{dy}{dx}$ in terms of $\tan x$, and verify that $\frac{dy}{dx} = 1$ when $x = \frac{1}{4}\pi$. [4]

The value of $\frac{dy}{dx}$ is also 1 at another point on the curve where $x = a$, as shown in the diagram.

- (b) Show that $t^3 + t^2 + 3t - 1 = 0$, where $t = \tan a$. [4]

.....

.....

Lined writing area with 10 horizontal dotted lines.

4. Nov/2021/Paper_9709/33/No.7

The equation of a curve is $\ln(x + y) = x - 2y$.

(a) Show that $\frac{dy}{dx} = \frac{x + y - 1}{2(x + y) + 1}$.

[4]

A series of horizontal dotted lines for writing the solution.

(b) Find the coordinates of the point on the curve where the tangent is parallel to the x -axis. [3]
