www.papacambridge.com MARK SCHEME for the October/November 2007 question paper

9702 PHYSICS

9702/31

Paper 31 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2007 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

		GCE A/AS LEVEL – October/November 2007 970	02 22
Questic	on 1		and.
Manipu	Ilatio	on, measurement and observation	hunn, Papa er 02 02 02 02 02 00 00 00
Succes	sful	collection of data	50
(a)	(i)	Diameter of wire. 2 d.p. (mm) in raw data. Allow 0.195 or 0.190 mm (0.19 mm \pm 0.02 mm or SV \pm 0.02 mm). Consistent unit. Unit needed	
	(i)	Repeat measurement	[1]
(c)	Five Fou Thre Maj Min Min (e.g	neasurements in table e marks for six sets of readings for V and l ir marks for five sets ee marks for four sets, etc. for or unspecified help –2 (e.g. setting up circuit) for help: –1 (e.g. minor changes with circuit) AND –1 (help with readin ficrometer) reasonable values of V –1 g. Voltage values are the same ($V_{max} - V_{min} < 0.5V$), wrong trend	
Range		$V\downarrow$) or if any one value of V < 0.5 V.) distribution of values	[5]
(c)	(l _{ma}	$_x - l_{min}$) must be greater than or equal to 70 cm. Ignore POT error.	[1]
Presen	tatio	n of data and observations	
Table: I	layo	ut	
(c)	Eac Igno The	umn headings: V/V; l/cm ; $l/A/m^{-1}$. ch column heading must contain a quantity and a unit where appropr ore units in the body of the table. Ignore POT errors. ere must be some distinguishing mark between the quantity and the u . solidus is expected, but accept, for example, l (cm)).	
Table: r	raw (Jata	
(c)	All ۱	nsistency of presentation of raw readings values of <i>l</i> must be given to the same number of decimal places. ad to 1 mm or 1 cm	[1]
Table: (calcı	ulated quantities	
(c)	∜Ă s	nificant figures. Apply to <i>t</i> /A. should be given to the same number or one more than the lowest nu nificant figures from <i>t</i> or <u>raw</u> values of d.	umber of [1]
(c)		ues of <i>1</i> /A correct using candidate's figures. Allow small rounding errect a value. If incorrect, write in the correct value. Ignore POT error.	

Page 3	Mark Scheme Syllabus	er
	GCE A/AS LEVEL – October/November 2007 9702	Dag
Graph: layou	ıt	annb.
Sens Scal the g	s. If wrong graph plotted (e.g. l against l/A) do not award mark. sible scales must be used. Awkward scales (e.g. 3:10) are not allowed. es must be chosen so that the plotted points occupy at least half graph grid in both x and y directions. Allow inverted axes. es must be labelled with the quantity which is being plotted. Ignore units.	abaCambrid
Graph: plott	ing of points	
Ring	bservations must be plotted. No blobs (points \geq half a small square ϕ). and check a suspect plot. Tick if correct. Re-plot if incorrect. to an accuracy of half a small square.	[1]
Graph: trenc	line	
Do n Judg Ther	of best fit. Allow 1 point off. At least 5 trend plots needed. ot award mark if large scatter. In by scatter of points about the candidate's line. In must be a fair scatter of points either side of the line. The best line if candidate's line is not the best line.	[1]
Quality of da	ita	
All p	e by scatter of points about the best fit line. Allow up to ± 0.05V. lotted points are assessed for this mark. ast 5 plots needed. If V constant do not award mark.	[1]
Analysis, co	nclusions and evaluation	
Interpretatio	n of graph	
	Gradient The hypotenuse of the Δ must be at least half the length of the drawn line. Read-offs must be accurate to half a small square. Do not allow table values unless on the line of best fit. Write in correct read off. Check for $\Delta y/\Delta x$ (i.e. do not allow $\Delta x/\Delta y$).	[1]
	y-intercept The value must be read to the nearest half square. The value can be calculated using ratios or $y = mx + c$. Incorrect algebra –1. If a false origin has been used then label FO.	[1]
Drawing con	clusions	
• •	e for k, 0.5 V \leq k \leq 2.5 V	
Shou	uld be <i>y</i> -intercept. Unit required. 2 or 3 SF.	[1]
	e for <i>I</i> , 0.05 A ≤ <i>I</i> ≤ 0.20 A	
• •	come from gradient. Working must be checked. Unit required A (V Ω^{-1}).

			GCE A/AS LEVEL – October/November 2007	9702	
lentifying (f) (i)		Re	<i>tations</i> levant points must be underlined and ticked. me of these might be:		cambridge.c
		Α	Only two readings (are not enough to draw a valid conc	lusion).	9177

Identifying limitations

- (f) (i) Relevant points must be underlined and ticked. Some of these might be:
 - Only two readings (are not enough to draw a valid conclusion). Α
 - В Hard to judge/see (when/where) highest position with reference to movement. Do not accept reaction time ideas.
 - С Parallax (error) or good diagram demonstrating this.
 - D Difficulty in release/keeping rule still prior to release (reference to force).
 - Ε Equilibrium position changes with evidence shown in measurements.
 - Х Other additional source of error.

Suggesting improvements

- (f) (ii) Relevant points must be underlined and ticked.4 Some of these might be:
 - Α Take more readings and plot a graph/calculate k values.
 - В High speed (camera to take) photographs/film the motion and <u>play back</u> frame by frame/ slow motion/ use pause OR motion/position sensor above/ below mass OR trial and error with light gate/ horizontal marker.
 - С Measure at eye level/repeat to get eye in right place/ place rule as close as possible to vertical rule/use helper to release or measure/use mounted pin at end of rule (to help locate position on scale).
 - Use a named method to release the rule e.g. cotton and candle or D scissors/electromagnet/end stop or clamp.
 - Х cm rule – use a mm rule. Need to see evidence in their previous measurements that their readings are taken to the nearest cm or 0.5 cm.
 - Υ Other additional solution, well explained.

Do not allow 'repeated readings, vacuum, draft free room' Do not allow 'use a computer to improve the experiment' Do not allow 'increase range/change load on ruler/change length of ruler/changing quality of ruler' [4]
