www.papacambridge.com MARK SCHEME for the October/November 2007 question paper

9702 PHYSICS

9702/32

Paper 32 (Advanced Practical Skills 2), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2007 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Pa	ge 2	Mark Scheme GCE A/AS LEVEL – October/November 2007	Syllabus 9702	er
uestio	on 1		Syllabus 9702 Aba	Cam
anipu	lation, m	easurement and observation		orio
ucces	sful colle	ection of data		
(b)	four for f	ements rks for six sets of readings for l and R_2 , ive sets, etc. nreasonable values of R_2 , e.g. R_2 >40 or R_2 <2.5, e.g. in		[5]
(b)	Circuit se	et up without help from Supervisor (minor help –1, maj	or help –2)	[2]
Range a	and distr	ibution of values		
(b)	R ₂ value	s must include 40 Ω and one value \leqslant 5 Ω		[1]
Present	ation of	data and observations		
Table: I	ayout			
(b)	Each col Ignore u There m	headings lumn heading must contain a quantity and a unit where nits in the body of the table. ust be some distinguishing mark between the quantity dus is expected, but accept, for example, <i>l</i> (cm)).		[1]
Table: r	aw data			
(b)	All value	ency of presentation of raw readings is of <i>l</i> must be given to the same number of decimal pla e to nearest 1 mm or 1 cm).	aces.	[1]
Table: d	alculate	d quantities		
(b)	Apply to If <i>l</i> is give	nt figures 1/ <i>l</i> only. en to 2 sf, then accept 1/ <i>l</i> to 2 or 3 sf. en to 3 sf, then accept 1/ <i>l</i> to 3 or 4 sf. of 1/ <i>l</i> given as fractions lose this mark.		[1]
(b)	Check a	of 1/ <i>l</i> correct. value. If incorrect, write in the correct value. lues of 1/l given as fractions for this mark.		[1]
Graph:	layout			
Graph)	Sensible There sh Scales n the graph Scales n instead of	e scales must be used. Awkward scales (e.g. 3:10) are hould not be more than three large squares between ax nust be chosen so that the plotted points must occupy a h grid in both x and y directions. nust be labelled with the quantity which is being plotted of R_2). Ignore units. henalise reversed axes but penalise if the wrong graph	tis labels. at least half l (do not accept <i>R</i>	[1]

Page 4	Mark Scheme GCE A/AS LEVEL – October/November 2007	Syllabus of er 9702
Question 2		Syllabus 9702 Bracannbridge.co.
lanipulati	on, measurement and observation	Tidge
uccessfu	collection of data	co.
(b) (ii)	First value of <i>d</i> to nearest cm or mm.	[1]
(c) (ii)	First value of <i>t</i> (must be between 0.1 and 10 s).	[1]
(f) (ii)	Second value of <i>d</i> (must be less than first value)	[1]
(f) (ii)	Second value of <i>t</i> .	[1]
(f) (ii)	Two values of <i>h</i> in range 0 to 130 cm. (both values could be	be the same) [1]
(f) (ii)	Repeated measurements for <i>t</i> (first or second reading)	[1]
Quality of	lata	
(f) (ii)	Smaller d gives greater v (use corrected values of v).	[1]

Presentation of data and observations

Display of calculation and reasoning

- (e) First value of *v* calculated correctly. Calculations must be checked (if wrong, write in correct value). [1]
- (f) (ii) Second value of *v* calculated correctly. Calculations must be checked (if wrong, write in correct value). [1]
- (g) Correct calculation to check proportionality [1]
 Possibilities include: Two calculations of vd. Ratio of v values and inverse ratio of d values both calculated.

Page 5	Mark Scheme	Syllabus
	GCE A/AS LEVEL – October/November 2007	9702

Analysis, conclusions and evaluation

Drawing conclusions

(g) Conclusion

www.papaCambridge.com Sensible comments relating to proportionality calculations and to the suggested relation. Incorrect ideas score zero.

Estimating uncertainties

(d) Percentage uncertainty in t. [1] Absolute uncertainty must be 0.1 to 0.5 s, or if repeated readings have been done then the uncertainty could be half the range. Correct ratio idea and x100 required.

Identifying limitations

(h) (i) Relevant points must be underlined and ticked. Some of these might be:

- Two sets of readings not enough (to draw valid conclusion). А
- Cone may have not reached terminal velocity. В
- С Hard to see when cone strikes floor.
- Cone falls at an angle (due to draughts/imbalance of cone). D
- Е Human error in timing/reaction time.
- Difficult to measure diameter because cone flexible. F
- G Parallax error (at reading positions).
- Х Other source of error

Suggesting improvements

(h) (ii) Relevant points must be underlined and ticked. [4] Some of these might be:

- Take more readings and plot a graph/calculate ratios. Α
- В Ensure terminal velocity by increasing release height/measure velocity at two intervals to check terminal velocity reached.
- С Use pressure/other sensor (on floor) to stop timer/use assistant to judge when it reaches the floor.
- D Turn off fans/balance the cone e.g. extra strip of tape.
- E1 Use light gate to trigger stopwatch/use video camera with slow motion replay/use multiflash photography/use high speed camera with known time intervals.
- F2 Time over greater distance.
- F Measure diameter of cone in two directions and average.
- G Drop in front of rule/read at eye level.
- Y Another improvement, well explained.

Do not allow 'repeated readings' (unless qualified by 'plot a graph'). Do not allow 'use a computer to improve the experiment'

[Total for Question 2: 20]
