9702/35

Advanced Practical Skills 1

October/November 2011

CONFIDENTIAL INSTRUCTIONS

Great care should be taken to ensure that any confidential information given does not reach the candidates either directly or indirectly.

No access to the Question Paper is permitted in advance of the examination.

If you have any problems or queries regarding these Instructions, please contact CIE
by e-mail: international@cie.org.uk,
by phone: +44 1223 553554,
by fax: +44 1223 553558,
stating the Centre number, the nature of the query and the syllabus number quoted above.

This document consists of **6** printed pages and **2** blank pages.

Preparing apparatus

These instructions detail the apparatus required for the experiments in the Question Paper. It is essential that absolute confidentiality is maintained in advance of the examination: the content of these instructions must not be revealed either directly or indirectly to candidates.

No access is permitted to the Question Paper in advance of the examination.

If you have problems or queries regarding these instructions, please contact CIE:

by e-mail: international@cie.org.uk,
or by telephone: +44 1223 553554,
or by fax: +44 1223 553558,

stating the nature of the query and quoting the syllabus and paper numbers (9702/35).

It is assumed that the ordinary apparatus of a Physics laboratory will be available.

Number of sets of apparatus

The number of sets of apparatus provided for each experiment should be $\frac{1}{2}N$, where N is the number of candidates taking the examination. There should, in addition, be a few spare sets of apparatus available in case problems arise during the examination.

Organisation of the examination

Candidates should be allowed access to the apparatus for each experiment for one hour only. After spending one hour on one experiment, candidates should change over to the other experiment. The order in which a candidate attempts the two experiments is immaterial.

Assistance to Candidates

Candidates should be informed that, if they find themselves in real difficulty, they may ask the Supervisor for practical assistance, but that the extent of this assistance will be reported to the Examiner, who may make a deduction of marks.

Assistance should only be given:

when it is asked for by a candidate,
or as directed in the Notes sections of these instructions,
or where apparatus is seen to have developed a fault.

Assistance should be restricted to enabling candidates to make observations and measurements. Observations and measurements must not be made for candidates, and no help should be given with data analysis or evaluation.

All assistance given to candidates must be reported on the Supervisor's Report Form.

Faulty apparatus

In cases of faulty apparatus (not arising from a candidate's mishandling) that prevent the required measurements being taken, the Supervisor may allow extra time to give the candidate a fair opportunity to perform the experiment as if the fault had not been present. The candidate should use a spare copy of the Question Paper when the fault has been rectified or when working with a second set of apparatus.

Supervisor's Report

The Supervisor should complete the Supervisor's Report Form on pages 7 and 8 and enclose it in the envelope containing the answers of the candidates. If more than one envelope is used, a copy of the report must be enclosed in each envelope.

Question 1**Apparatus requirements (per set of apparatus unless otherwise specified)**

250 ml beaker with approximate diameter 7 cm and approximate height 10 cm.

100 g of modelling clay (e.g. Plasticine). See Note 1.

Tray to catch any spillages.

Large transparent cylindrical container with smooth sides (e.g. glass jar or 2 litre drinks bottle with the top cut off). See Note 2.

Plastic or polystyrene cup.

One 50 g and five 10 g flat (slotted) masses each with its value clearly labelled.

30 cm ruler with a millimetre scale.

Supply of paper towels.

Access to vernier calipers.

Notes

- 1 The modelling clay should be pressed to the bottom of the **inside** of the 250 ml beaker forming a flat layer as shown in Fig. 1.1.

Fig. 1.1

- 2 The large transparent container should be approximately 2 cm wider and approximately 2 cm taller than the beaker.
The large container should contain enough water so that the beaker can float near to the top of the container.
The large container should stand in the tray.
- 3 If the apparatus is to be used by another candidate, then it should be restored to its original state.

Information required by Examiners

Height of 250 ml beaker.

Sample set of numerical results, clearly labelled "Supervisor's Results" and obtained out of sight of the candidates.

Question 2**Apparatus requirements (per set of apparatus unless otherwise specified)**

12V d.c. power supply (continuous or stepped with 2V graduations or smaller).

Voltmeter or multimeter reading to at least 12V with a precision of 0.1V or better.

Liquid-in-glass thermometer covering the range 0–60°C with 1°C graduations (not 0.5°C graduations).

Stopwatch reading to 0.1 s or better.

10Ω resistor with a power rating of at least 10W (e.g. RS Components 666-1724). See Note 1.

Two 20 cm lengths of flexible insulated wire. See Note 1.

100 ml measuring cylinder with 1 ml graduations.

250 ml beaker.

100 g metal mass (e.g. slotted mass) with its value clearly labelled.

Beaker with approximately 200 ml of water at room temperature.

Five connecting leads. Two of the leads should each have a crocodile clip at one end. See Note 2.

Switch.

Notes

1 Solder the resistor and the wires as shown in Fig. 2.1.

Fig. 2.1

2 It should be possible to connect several leads together, for example with stackable plugs.

3 If the apparatus is to be used by another candidate, then it should be restored to its original state.

Information required by Examiners

Sample set of numerical results, clearly labelled “Supervisor’s Results” and obtained out of sight of the candidates.

This form should be completed and sent to the Examiner with the scripts.

SUPERVISOR'S REPORT FORM

General Certificate of Education Advanced Subsidiary Level and Advanced Level

October/November Session 2011

The Supervisor's Report should give full details of:

- (a) any help given to a candidate (including the nature of the help given and the name and candidate number of the candidate);
- (b) any cases of faulty apparatus (including the nature of the problem, the action taken to rectify it, any additional time allowed, and the name and candidate number of the candidate);
- (c) any accidents that occurred during the examination;
- (d) any other difficulties experienced by candidates, or any other information that is likely to assist the Examiner, especially if this information cannot be discovered in the scripts.

Cases of individual hardship, such as illness, bereavement or disability, should be reported direct to CIE on the normal Special Consideration form.

Information required by Examiners

Height of 250 ml beaker used in Question 1 = cm

For each question, please enclose a sample set of numerical results, obtained out of sight of the candidates and clearly labelled 'Supervisor's Results'.

Supervisor's Report

Supervisor's Report (continued)

Declaration

(to be signed by the Supervisor)

The preparation of this practical examination has been carried out so as to maintain fully the security of the examination.
