UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS GCE Advanced Subsidiary Level and GCE Advanced Level

www.papacambridge.com MARK SCHEME for the October/November 2011 question paper

for the guidance of teachers

9702 PHYSICS

9702/53

Paper 5 (Planning, Analysis and Evaluation), maximum raw mark 30

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Pa	ge 2	Mark Scheme: Teachers' version	Syllabus er		
		GCE AS/A LEVEL – October/November 2011	9702 23		
Pla	Planning (15 marks)				
Def P P P	A is the i Keep the	problem (3 marks) ndependent variable and <i>V</i> is the dependent variable e number of turns on coil Y or coil X <u>constant</u> . e current in <u>coil X constant</u> .	Syllabus 9702 or vary A and measure V. [1]		
M1 M2 M3 M4	Two inde Alternatin Coil Y co Measure	data collection (5 marks) ependent coils <u>labelled X and Y</u> ; coil Y wound over coing power supply/signal generator connected to coil X. onnected to voltmeter/c.r.o. in a workable circuit. diameter/radius/lengths with a ruler/vernier callipers. to determine area.			
Me A A	Plot a gra	nalysis (2 marks) aph of <i>V</i> against <i>A</i> . ship valid if straight line through origin.	[1] [1]		
Saf S	Precautio	i derations (1 mark) on linked to (large) current in <u>coil</u> /heating, e.g. switcl ing coil; do not touch coil because it is hot.	h off when not in use to avoid [1]		
Ad	ditional d	etail (4 marks)			
D	Relevant	points might include	[4]		
1	Use large e.m.f.	e current in coil X/large number of turns/high frequen	cy a.c. to produce measurable		
2		measuring e.m.f., e.g. height × <i>y</i> -gain on CRO.			
3		quency of power supply constant.			
4		neostat to keep current constant in coil X.			
E	Manifary				

- 5 Monitor with a.c. ammeter.
- 6 Avoid other <u>alternating</u> magnetic fields.
 7 Repeat measurement for *r* or *d* or lengths <u>and average</u>.

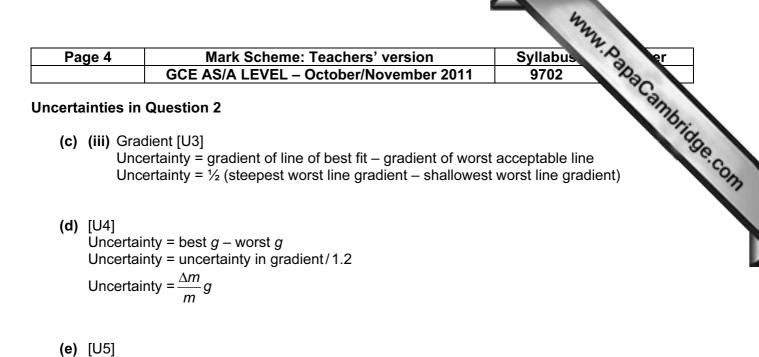

Do not allow vague computer methods.

[Total: 15]

Analysis, conclusions and evaluation (15 marks) 2

Page 3		Mark Scheme: Teachers' versionSyllabusGCE AS/A LEVEL – October/November 20119702	
2 An	alysis, c	onclusions and evaluation (15 marks)	sion Syllabus mber 2011 9702 Additional Guidance Allow 2hg. T1 for ratio values: Ignore sf in 2 nd row.
Part	Mark	Expected Answer	Additional Guidance
(a)	A1	2gh	Allow 2hg.
(b)	T1 T2		T1 for ratio values: Ignore sf in 2^{nd} row. T2 for v^2 . Rows 1–4 to 3 s.f. or 4 s.f. Rows 5–6 to 2 s.f. or 3 s.f.
	U1	From \pm 0.02 or \pm 0.03, to \pm 0.2	Allow more than one significant figure.
(c) (i)	G1	Six points plotted correctly	Must be within half a small square. Do not allow 'blobs' (more than half a small square). Ecf allowed from table.
	U2	Error bars in v^2 plotted correctly	All error bars to be plotted. Check third and fourth plot. Must be accurate to less than half a small square.
(c) (ii)	G2	Line of best fit	If points are plotted correctly then lower end of line should pass between (0.10, 1.16) and (0.10, 1.24) and upper end of line should pass between (0.45, 5.12) and (0.45, 5.20). Allow ecf from points plotted incorrectly – examiner judgement.
	G3	Worst acceptable straight line. Steepest or shallowest possible line that passes through <u>all</u> the error bars.	Line should be clearly labelled or dashed. Should pass from top of top error bar to bottom of bottom error bar or bottom of top error bar to top of bottom error bar. Mark scored only if error bars are plotted.
(c) (iii)	C1	Gradient of best fit line	The triangle used should be at least half the length of the drawn line. Check the read offs. Work to half a small square. Do not penalise POT.
	U3	Uncertainty in gradient	Method of determining absolute uncertainty. Difference in worst gradient and gradient.
(d)	C2	g = gradient/2h = gradient/1.2	Gradient must be used. Allow ecf from (c)(iii) .
	U4	Absolute uncertainty in g	Uses worst gradient. Do not check calculation.
(e)	C3	Ratio = 0.6/(0.6 + 1.8) = 0.25	Expect to see 1.00 added and largest <i>m</i> .
	C4	Between 1.66 and 1.70 given to 2 or 3 s.f.	$v = \sqrt{2 \times 0.25 \times g \times 0.6} = \sqrt{0.3 \times g}$ or $v = \sqrt{\text{gradient} \times 0.25}$ or $v = \sqrt{v^2}$ read from graph for ratio 0.25. Must be in range. Allow 1.7.
	U5	Determines absolute uncertainty	Allow ecf. Expect to see difference between best and worst values.

) [05]
Uncertainty = best v – worst v
Uncertainty =
$$\frac{1}{2} \times \frac{\Delta m}{m} v$$

Uncertainty = $\frac{1}{2} \times \frac{\Delta g}{g} v$
