UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Level

MARK SCHEME for the November 2005 question paper

9698 PSYCHOLOGY

9698/03 Paper 3 maximum raw mark 70

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published Report on the Examination.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the Report on the Examination.

The minimum marks in these components needed for various grades were previously published with these mark schemes, but are now instead included in the Report on the Examination for this session.

CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2005 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Q		Description	Tax

Q	Description	70
Qa	KNOWLEDGE(1) [Terminology and concepts]	00
	Some appropriate concepts and theories are considered. An attempt is made to use	ridge co.
	psychological terminology appropriately. Range of appropriate concepts and theories are considered. The answer shows a	2
	confident use of psychological terminology.	2
	KNOWLEDGE(2) [Evidence]	
	Some basic evidence is described and/or it is of peripheral relevance only and/or it is	1
	predominantly anecdotal.	
	Appropriate psychological evidence is accurately described but is limited in scope and detail.	2
	Appropriate psychological evidence is accurately described and is reasonably wide ranging and detailed.	З
	Appropriate psychological evidence is accurately described and is wide ranging and detailed.	4
	UNDERSTANDING [What the knowledge means]	
	Some understanding of appropriate concepts and/or evidence is discernible in the answer.	1
	The answer clearly identifies the meaning of the theory/evidence presented.	2
	Maximum mark for part (a)	8
Qb	EVALUATION [Assessing quality of data]	
	The quality of pertinent evidence is considered against one evaluation issue.	1
	The quality of evidence is considered against a number of issues, but is limited in	2
	scope and detail.	-
	The quality of evidence is considered against a number of issues and is reasonably wide ranging and detailed.	3
	The quality of evidence is considered against a number of issues and is wide ranging and detailed.	4
	ANALYSIS [Key points and valid generalisations]	
	Key points are identified for a given study (or number of studies) OR across studies, but no valid generalisations/conclusions are made.	1
	The answer identifies key points across studies and valid generalisations/conclusions are made.	2
	CROSS REFERENCING [Compare and contrast]	
	Two or more pieces of evidence are offered for a given issue but the relationship between them is not made explicit.	1
	Two or more pieces of evidence are offered for a given issue and the relationship between them (comparison or contrast) is explicit.	2
	ANALYSIS [Structure of answer]	
	The essay has a basic structure and argument.	1
	Structure sound and argument clear and coherent.	2
	Maximum mark for part (b)	10
	APPLICATION [Applying to new situations and relating to theory/method]	
	An attempt has been made to apply the assessment request specifically to the evidence. Appropriate suggestion. One basic application.	1
	The assessment request has been applied effectively to the evidence. Appropriate suggestion. One or more detailed applications considered.	2

1 (a)	Explain, in your own words, what is meant by the term 'gifted'.	2	ò. `
	Typically: educational ability of those who are statistically not normal being at the		3
	top end of the normal distribution curve. Could be a definition from Q1b below.	1	
(b)	(b) Describe one way in which giftedness can be assessed.		

PSYCHOLOGY AND EDUCATION

Section A

1	(a)	Explain, in your own words, what is meant by the term 'gifted'.	2
_	(4)	Typically: educational ability of those who are statistically not normal being at the	
		top end of the normal distribution curve. Could be a definition from Q1b below.	
	(b)	Describe one way in which giftedness can be assessed.	3
	(-)	Special needs can include giftedness and specific learning and behavioural	
		disabilities. A definition of giftedness might be a good place to start but right away	
		there are problems. Some believe it is exceptional performance on an intelligence	
		test. But where is the borderline between gifted and others set? Terman (1925)	
		<u> </u>	
		claimed IQ of 140 (approx 1 in 200); Ogilvie (1973) suggests IQ of 130 (1 in 40) and	
		DeHaan and Havighurst (1960) suggest 120 (approx 1 in 10).	
		Others believe giftedness is a more specific ability such as in sport or music.	
		Bridges (1969) and Tempest (1974) outline signs of giftedness, Bridges with seven	
		(read at 3 years of age; enormous energy) and Tempest with nine (likely to be highly	
		competitive; able to deal with abstract problems).	
		Hitchfield (1973) found teachers were not good at identifying giftedness.	_
	(c)	Describe two ways in which children who are gifted could be	6
		educated.	
		1] acceleration: bright children are promoted to a higher class than normal. Good	
		intellectually but bad socially and emotionally. 2] segregation: bright children	
		selected for particular schools. This may result in academic success in a particular	
		ability but it is unfair, divisive and hard to implement. 3] enrichment: done within a	
		normal classroom and can involve extra-curricular activity and individualised learning	
		programmes with independent learning possible.	
2	(a)	Explain, in your own words, what is meant by 'design and layout	2
_	(a)	of educational environments'.	_
		Typically: features of the architecture and contents of any area where	
		education takes place.	
	(b)	Describe two physical features of learning environments that may	6
	(5)	affect learning.	
		a. open plan schools versus 'traditional' designs. Traditional = formal; open plan =

	the i	mplications of differences for students;			
	possi	ible reductionism;			
	• the r	reliability and validity of evidence;			
	• how	evidence was gained in this area.			
(c)	Giving r	reasons for your answer, suggest how you, as a sch	ool		
	teacher	, could improve the performance of a group of boys	who		
	are perf	forming poorly at school.			
	Mark	scheme guidelines apply in that any reasonable suggestion is a	cceptable.	6	
		tegy would be to segregate them and give them special attent			
	_	small group tutorials. A variation is simply to educate the boys	•		
		girls. An alternative strategy is to have them remain integrat	ed but have		
	seating p	ositions reorganised (boy-girl-boy-girl).			

N Describe what we shall aliche have discovered about the abit a read	
\ \ December 1 \ December 2 \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	
) Describe what psychologists have discovered about teaching and	
learning styles.	
Learning styles are for the learner and teaching styles are the way in which	
teachers present material to be learned. Anything that could be considered a	
teaching approach or style is acceptable. Lefrancois outlines a 'teaching model'	
pointing out what is desired before, during and after teaching. He also outlines 28	
recommended behaviours for effective teaching. Fontana suggests the debate is	
between formal (subject emphasis and to initiate children in essentials) and	
informal (emphasis on child, teacher identifying child's needs) styles. A study on	
this was carried out by Bennett (1976) and followed up by Aitken et al (1981).	
Similarly Flanders (1970) suggests direct (lectures, etc) versus indirect (accepts	
that children have ideas & feelings) styles. Evidence exists for each approach.	
Bennett (1976) found progress in three 'R's' better in primary school using formal	
approach. Haddon & Lytton (1968) found creativity better when informal approach	
used. Based on the work of Lewin et al, Baumrind (1972) outlines three styles:	
authoritarian, authoritative (i.e. democratic) and laissez-faire. Baumrind believes	
the authoritative style is most effective.	
It could be argued that learning styles are determined by approach to, or	
perspective on, learning and so candidates could consider styles adopted if following	
a behaviourist or cognitivist or humanist approach. Learning styles have direct	
implications for teaching styles. Possible styles include lecturing, discussing,	
reciting, dictating, questioning, guided discovery, peer tutoring, etc. Advantages and	
disadvantages of each are relevant. An alternative is to consider Kolb's (1976)	
learning styles whereby a preferred learning style can be identified through a	
learning kite. Four styles are possible: dynamic, imaginative, analytical and common-	
sense.

		is on teacher not student. Any appropriate strategy that has	supporting
	psycholog	gical reasons.	

PSYCHOLOGY AND ENVIRONMENT Section A

Sect	ion A	
5 (a)	Explain, in your own words, what is meant by the term 'density'.	2
	Density refers to physical conditions (may be social or spatial). Crowding is a	
	psychological state determined by perceptions of restrictiveness when exposed	
	to spatial limitations (Stokols, 1972).	
(b)	Briefly describe two studies showing the effects of crowding on social behaviour.	6
	social behaviour: helping: studies by Bickman et. al. (1973) in dormitories and	
	Jorgenson & Dukes (1976) in a cafeteria requesting trays be returned.	
	Aggression: Studies involving children. Price (1971); Loo et al (1972); Aiello et al	
	(1979) all found different things. Crucial variable is toys given to children.	
	Studies on male-female differences too. Candidates could look at crowding and	
	attraction.	
(c)	Describe one way in which a person can reduce the negative effects of crowding they experience.	3
	Most likely: Increase cognitive control: Langer et al (1977) info about crowding	
	to one group but not to other before entering crowded grocery store. If	
	expecting crowding then not as bad if unexpected. Coping with crowding: e.g.	
	Karlin et al (1979) gave training in muscle relaxation, cognitive reappraisal or	
	imagery. Found cognitive reappraisal best.	
6 (a)	Explain, in your own words, what is meant by 'community	2
U (U)	Explain, in your own words, what is meant by community	

6 (a)	Explain, in your own words, what is meant by 'community environmental design'.	2
	Typically: the design of buildings for public use. This most typically involves the design of shopping centres/malls but also the design of housing communities such as Newman's Clason Point.	
(b)	Describe one effect of urban living on health and one effect of urban living on social behaviour.	6
	Most likely: 1. Affiliative behaviour Krupat (1982) A confederate approaches the participant and tries to take a picture of them. The pictures are then rated by college students. These students rated 'urbanites' as less friendly, less easy-going and more tense compared to 'ruralites'. Milgram (1977) Undergraduate students approached a stranger and extended their hand in a friendly gesture (as if to initiate a handshake). Only 38.5% of city dwellers reciprocated compared to 66% in rural areas. 2. Pro-social behaviour Altman (1969) had participants knock on a door explaining that they were visiting a friend and that they had lost the address. They still had the number and could they possibly use your 'phone to call their friend. Do you think that people would let them	

Page 7	Mark Scheme	Sylla
	GCE A LEVEL – November 2005	9698
but only town hor Amato (street t Small to	an found that a woman was admitted to about 94% of the sm to 40% of the city homes; a man was admitted to about 40% nes but only 14% of the city homes. 1983) study in 55 different Australian communities. A man li hen screamed, fell over and clutched his leg which began blea wn (under 1,000 inhabitants) 50% stopped to help.	of the small mped down a

Down to 15% in major cities with over 1 million inhabitants.

These findings have been confirmed in studies carried out in countries such as Israel, Turkey, the Sudan, Australia and Britain.

Health

Franck et al (1974) Interviews with students who were newcomers to either or small town or a large City. Urban newcomers experienced significantly more tension in the city. Reverse true of those moving to rural area. Urbanites affected far more by physical stressors (pollution, crowding, noise). Rural newcomers complained of lack of cultural diversity.

(c) Describe **one** urban housing design that has been successful. 3

Why did Pruitt-Igoe fail?

Newman (1976) certain buildings are likely to be vandalised/burglarised because of their design. Crucial aspects include:

- 1. Zone of territorial influence: an area which appears to belong to someone. If no apparent owner (i.e. is semi-public) > more vandalism
- 2. Opportunities for surveillance: vandalism more likely if vandals cannot be seen. Newman put ideas into practice and designed low-cost housing project - Clason Point in New York City. Clason Point consists of cluster housing of 12-40 families per cluster. Increased defensible space.
- 1. Assigned public space to be controlled by specific families by using
- 2. Reduced number of pedestrian routes through the project and improved lighting along the paths.
- 3. Improved the image and encouraged a sense of personal ownership by giving different colours to individual dwellings.

Residents took pride in their dwellings, planting grass, adding own new modifications and even sweeping the public sidewalks. Serious crimes dropped by 62%. Number of residents who said they felt they had the right to question a stranger in the project doubled.

Also Five Oaks, Dayton, Ohio (1994) streets closed, speed bumps introduced and divided into 'mini-neighbourhoods'.

Section B

7 (a) 8 Describe what psychologists have discovered about noise. Candidates may well begin with definitions and types. As with other environment areas, the syllabus states performance, social behaviour and health. Health: McCarthy et al (1992) noise affects the immune system; Doring et al (1980) noise causes ulcers; Cohen et al (1986) found increased blood pressure in children at school on flight path. Many, many other studies. Is no direct link - noise may be stressful and stress causes health problems. Candidates may also look at mental Performance: 3 categories to consider: (a) effects during exposure; (b) aftereffects; (c) effects on children. (a) Lab studies have shown mixed results with a wide range of variables. Effect depends on: volume, predictability and controllability; type of task performed; stress tolerance; individual personality. (b) Even if performance is not affected at time of study, effect of noise may continue for some time and hinder later performance e.g. Glass et al (1969); Sherrod et al (1977). (c) Hambrick-Dixon (1986); Cohen et al (1986) compared

Page 8	Mark Scheme	Sylla
	GCE A LEVEL – November 2005	9698

	children from noisy and quiet schools near Los Angeles airport. Found those from noisy environment suffered from learned helplessness lack of achievement and distractibility. Evans et al (1993) study of those near Munich airport. Also problems. Social behaviour: aggression: likely to be popular as many unethical lab studies involving electric shock. e.g. Geen & O'Neal (1969); Donnerstein & Wilson (1976). Helping: also popular with both lab and natural studies by Matthews & Canon (1975) and Page (1977). Some candidates may look at attraction but evidence here is limited.	
(b)	Evaluate what psychologists have discovered about noise.	10
	 NOTE: any evaluative point can receive credit; the hints are for guidance only. points about defining and categorising noise/air pollution; cultural and individual differences in perception of problem; comparing and contrasting laboratory with natural studies; the methods psychologists use to gain their evidence. 	
(c)	Giving reasons for your answer, suggest ways in which positive sound, such as music, can be beneficial.	6
	Candidates could focus on music played in doctor/dental waiting rooms to distract patients from worry about what may lie ahead. They could focus on Muzak, used in shops, supermarkets, etc to encourage people to buy certain products or attract a certain type of client. The work of North (1997) is relevant. Candidates could focus on the use of music in studying (Mozart effect) or any other aspect of behaviour. Work on increases in milk yield and egg production are also relevant.	

8 (a) Describe what psychologists have found out about crowds/collective behaviour.

need not be face-to-face; need not be assembled in one place; members must

Sears et al (1991) define a crowd as people in physical proximity to a common situation or stimulus. Additionally crowds: must involve a number of interacting people;

8

Brown (1965) classifies crowds according to their behaviours:

- 1. acquisitive crowd: Mrs Vaught (1928) where banks closed
- 2. apathetic crowd: Study of Kitty Genovese

influence one another.

- 3. expressive/peaceful crowd: Benewick & Holton (1987) interviewed people attending the visit of the Pope to Britain in 1982
- 4. baiting crowd: In 1964 there was the case of a man, standing on the ledge of a building ten storeys high. The crowd below of some 500 people shouted to him to jump off the ledge
- 5. aggressive crowd [often referred to as 'mob psychology']
- 6. escaping crowd [panicky and non-panicky]

Explanations of aggressive crowd behaviour: Mob Psychology of Le Bon (1895): Otherwise normally civilised people become "barbarians" - wild and irrational, giving vent to irrational impulses. Turner (1974) proposed the emergent norm theory.

Zimbardo (1969) Deindividuation: each person is nameless, faceless, anonymous and has diminished fear of retribution.

Laboratory studies of deindividuation

Zimbardo (1969) participants were laboratory coats and hoods that masked their faces. Similarly, Prentice-Dunn and Rogers 1983, gave Pps the opportunity to give a "victim" an electric shock. Milgram (1963) found that people were more willing to administer shocks when the participants could not see the victim and when the victim could not see them.

Deindividuation in children: Diener et al (1976) looked at deindividuation in children, using Hallowe'en and Trick or Treat as the scenario.

Social constructionism and aggressive crowds: Reicher (1984b) who cites violent incidents involving aggressive crowds. His classic example is the 'riot' that happened in the St. Paul's district of Bristol in 1980.

(b)	Evaluate what psychologists have found out about	guidance only.
	crowds/collective behaviour.	9
	NOTE: any evaluative point can receive credit; the hints are for	guidance only.
	 comparing and contrasting explanations; 	CON
	 how psychologists gather their data; 	7
	 the ethics of various studies; 	
	• generalisability from studies: sample ethnocentrism; method	
(c)	Giving reasons for your answer, suggest how you may p	prevent people 6
	in a crowd from behaving anti-socially.	
	Most likely: individuate them! Use of police (or similar) so separate	crowd; use
	of cctv to identify individuals.	

PSYCHOLOGY AND HEALTH

Section A

9 (a)	Explain, in your own words, what is meant by the term 'adherence to medical advice'.	2
	Typically: the extent to which people carry out the instructions given to them	
	1	
(b)	by a medical practitioner.	6
(0)	Outline two reasons why people may not adhere to medical advice.	0
	Any two from:	
	[1] Disease/Medical treatment programmes	
	[a] Severity of Illness [b] Side effects of treatment [c] Duration of treatment [d] Complexity of treatment [e] people are less likely to adhere if the treatment requires a change in long standing habits and behaviours. [f] expense or cost.	
	[2] Personal Characteristics [a] Cognitive and emotional factors [b] Social support: adherence is increased if there is appropriate support from family and friends and whether or not the supporters are stable. However, family and friends can have a negative effect, particularly if the patient's family is large. [c] personal beliefs/models:	
	(1) Fear of treatments: Leventhal's (1970) parallel response model. People have two beliefs 'danger control' (seek help because their health is in danger) or 'fear control' (seek ways to reduce fear = avoid treatment, get drunk, etc).	
	(2) common sense: Leventhal (1982) model where patients' own views about their illness can contradict doctor instructions and treatment. (3) Becker & Rosenstock's (1984) health belief model is relevant. Patients weigh up the pros or benefits of taking action against the cons or barriers of taking action and make a decision based on their assessment of these factors. (4) Fishbein & Ajzen's theory of reasoned action is appropriate. (5) Stanton's (1987) model of adherence behaviour is pertinent.	
	[3] Cultural factors	
	[4] Relationship between person and medical service.	
	[a] Speed of service [b] Practitioner's personality: Byrne & Long (1976) distinguish	
	between: doctor-centred and patient-centred personality. Savage and Armstrong	
	(1990) study on this. [c] Male/female practitioner: Hall et al (1994) found female	
	doctors asked more questions of patients and made more positive statements to patients. Patients talked more to female doctor. Law & Britten (1995) Is a female doctor better than a male doctor.	

	•	my.
Page 10	Mark Scheme	Sylla

		GCE A LEVEL – November 2005	9698
(c)	Most lil (a) ch (b) ch (c) ch (d) ha (e) pr	be one study which shows how adherence to medical improved. sely possibilities include: anging physician behaviour (DiMatteo & DiNicola, 1982); sending aining courses; anging communication style (Inui et al, 1976); ange information presentation techniques (Ley et al, (1982); we the person state they will comply (Kulik & Carlino, 1987); ovide social support (Jenkins, 1979) and increase supervision (Mc1973).	advice 3 doctors on
	(f) Be	havioural methods: tailor the treatment; give prompts and reminicourage self monitoring; provide targets and contracts.	ders;

0 (a)	Explain, in your own words, what is meant by the term 'stress'.	2
` '	Typically: so many possible definitions! Could focus on the cause of the stress	
	(stressor) or the stress response (e.g. emotional component) which would be	
	preferable to a very long, all encompassing textbook quote.	
(b)	Describe two ways in which stress can be measured.	6
	Most likely: physiological measures and psychological measures	
	sphygmomanometer - recording blood pressure;	
	galvanic skin response - recording skin conductivity;	
	heart rate - pulse or ECG; Physiologically by sample tests	
	blood or urine samples - record levels of hormone (i) cortico-steroids	
	and (ii) catecholamines.	
	Psychologically by Questionnaire based on life events	
	Holmes & Rahe (1967) Social Readjustment Scale.	
	Sarason et al (1978) <i>Life Experiences Survey.</i> 57 items rated on a 7 point	
	scale (+3 to -3) items such as 'major change in financial status'	
	Dohrenwend et al (1978) PERI Life Events Scale. 102 items on a 'gain, loss	
	or ambiguous' outcome. Are 11 topic areas (family, health, work, etc)	
	Lewinsohn et al (1985) <i>Unpleasant Events Schedule</i> . 320 items in categories	
	on a 3 point scale.	
	Coddington (1972) <i>Life Events Record</i> . A non-adult version for children and adolescents.	
	 Psychologically by Questionnaire based on daily hassles 	
	Kanner et al (1981) Hassles and Uplifts checklist.	
	Shaffer (1992) Hassles for students	
	Psychologically by Questionnaire based on personality	
	Friedman & Rosenman (1974) Type A personality and all subsequent work	
	Psychologically by Questionnaire other causal factors (such as work) e.g.	
	Professional Life Stress Scale.	
(c)	Describe one way in which stress can be managed.	3
	Candidates may focus on stress management and consider:	
	(1) Medical/pharmacological solutions. This perspective believes that stress can be	
	relieved medically by use of drugs. Main types prescribed are: [a] benzodiazepines	
	(trade names valium, librium, etc) reduce physiological arousal and feelings of	
	anxiety by activating a neurotransmitter that decreases neural transmission. [b]	
	beta-blockers (inderal) reduce physiological arousal and feelings of anxiety by	
	blocking neurones stimulated by adrenaline. Psychologists have learned that drugs	
	cause many problems.	
		1

Page 11	Mark Scheme	Sylla Paper
	GCE A LEVEL – November 2005	9698
progress biofeedb include of 1962) and (3) Alter	hological solutions 1: (behavioural /cognitive strategies) ve relaxation (Jacobsen, 1938); systematic desensitisation (ack; and modelling. Psychological solutions 2: (cognitive/behognitive restructuring (Lazarus, 1981); rational-emotive the multi-modal therapy (Lazarus, 1981); imagery (Bridge et al, inative strategies involving meditation, hypnosis or yoga. ling social support may also help (e.g. Cohen & Willis, 1985).	Wolpe, 1958); navioural) can herapy (Ellis,

11 (a)	Describe what psychologists have learned about health promotion.	8
	1] Appeals to fear/fear arousal (Janis & Feshbach, 1953 and Leventhal 1967) is the	
	traditional starting point. This is likely to be included because their strong fear	
	appeal could be said to be unethical and are not the most effective. The Yale model	
	(source of message/message/recipient) underlies so many attempts.	
	2] providing information via media (e.g. Flay, 1987) 3 approaches: 1] provide negative	
	info only; 2] for those who want to be helped provide first steps; 3] self help via tv	
	audience. Study by Lewin (1992) healthy heart manual also relevant.	
	3] behavioural methods: provision of instructions, programmes, diaries to use as	
	reinforcers.	
	Attempts in schools, worksites (e.g. Johnson & Johnson) and communities (e.g. three community study)	
	Specific attempts: smoking: Evans and fear arousal, Best and social inoculation,	
	Botvin and life skills training. The focus can also be on health protective behaviours	
	and encouraging primary prevention (e.g. BSE and TSE). Specific attempts: cancer:	
	advertising (the source for example); media campaigns: in US use of Betty	
	Ford/Nancy Reagan; providing information: leaflets etc in schools, health centres,	
	etc. Also important is sending personal reminder to attend.	
(b)	Evaluate what psychologists have learned about health promotion.	10
	NOTE: any evaluative point can receive credit; the hints are for guidance only.	
	the effectiveness of promotions;	
	the assumptions about human nature;	
	the ethics of some strategies;	
	the methodology used by psychologists.	
(c)	Using psychological evidence, outline the main features of a	6
worksite programme aimed at promoting health of a specific problem.		
		1
	Focus could be to reduce smoking, improve diet, etc.	
	Focus could be to reduce smoking, improve diet, etc. Most likely will be Johnson & Johnson's Live for Life, Control Data's Stay-Well with	
	1	

a) Describe what psychologists have learned about health and safety.	
Either general: Theory A : the person approach: accidents caused by the unsafe behaviour of people; Prevention is by changing the ways in which people behave; [fitting the person to the job] Theory B : the systems approach: accidents caused by unsafe systems at work; Prevention is by redesigning the work system; [fitting the job to the person]. Or specific: accident prone personality; human error = illusion of invulnerability or risk homeostasis or some transient state (e.g. lack of sleep). Some specific design

		nethods used by psychologists to study health and safety;	00
	• issue	s relating to individual and/or cultural differences;	, O
	• the i	mplications the evidence has for society design;	
	• comp	aring and contrasting theoretical explanations;	
	• the r	nethods psychologists use to gather data.	
(c)		sychological evidence, suggest ways in which accidents at	6
	home c	an be reduced.	
	Several p	ossibilities, most likely being the use of health promotion campaigns.	
	These co	uld take place in schools, worksites or communities. Campaigns could also be	
	specifics	such as that concerning chip pan fires. Answers must be psychological.	

PSYCHOLOGY AND ABNORMALITY Section A

3666	VII A			
13 (a)	Explain, in your own words, what is meant by 'abnormal learning'.	2		
Abnormal learning includes any type of learning abnormality a child may have in a				
	classroom. Most typically this would include autism, dyslexia (and related			
	difficulties e.g. dyscalculia) ADHD (attention deficit with/without hyperactivity).			
(b)	(b) Describe one type of abnormal learning and outline one possible			
	cause of it.			
	Depends on the type of abnormal learning chosen. Could be from those mentioned			
	above, or any appropriate alternative. Possible causes could be numerous, most			
	typically genetic, environmental, diet, MMR, etc.			
(c)	Describe one way in which abnormal learning may be overcome.	3		
	Again depends on choice, but most likely: treatments will either be medical			
	(drugs) or psychological (cognitive-behavioural) or alternatives. E.g. for ADHD			
	typically ritalin has been used extensively but also diet is considered to be			
	important.			

14 (a)	Explain, in your own words, what is meant by 'abnormal adult development'.	
	Typically: general neurological degeneration that occurs as the human body deteriorates with age.	
(b)	Describe two types of degenerative abnormality	6
	Most likely: Alzheimer's disease, Pick's disease, Korsakoff's psychosis. Candidates will most likely focus on organic degeneration of the brain. Most well known are Alzheimer's disease and Pick's. Both involve atrophy of brain cells resulting in presenile dementia.	
(c)	Give one way in which the effects of degenerative abnormality may be reduced.	3
	Most likely: changes in diet with vitamin enrichment. Medication is most likely - treatments for Alzheimer's (and Pick's) being developed all the time. 'Sonic Hedgehog' one of modern treatments.

		GCE A LEVEL – November 2005 9698	25
Section	on B		Cannot.
15 (a)		e what psychologists have found out about classifying and ing abnormality.	8 100
	'witchcra others. E categorie specific b psycholog	roaches could be taken here. Could be historical, moving from ft' to the founders of modern classification such as kraepelin and mphasis could be on development of DSM and ICD, with details on the s. This could be general: neuroses and psychoses to a much more preakdown. There could be a focus on appraoches: medical, gical, etc. Within these there could be a consideration of behavioural, alytic, humanistic, etc.	8 Raper 8
(b)	Evaluat	e what psychologists have found out about classifying and ing abnormality.	10
	pointcultucompdeter	any evaluative point can receive credit; the hints are for guidance only. Is about defining and categorising abnormality; ral and individual differences in abnormality; varing and contrasting explanations of cause; reministic explanations; reversus nurture.	
(c)	Giving r classifie Most like determin DSM/ICI	reasons for your answer, suggest a treatment for a ad abnormality ly: candidates will focus on one of the above aspects, and this will be the suggested way of overcoming the problem. For example of outlines 'affective disorders', one aspect of this is depression and one atment in certain countries is ECT. Answers must be based on	6

16 (a)	Describe what psychologists have found out about abnormal affect.	8		
	Typically: abnormal affect concerns disorders of mood and emotion, most			
	typically depression and mania or manic-depression. Most likely: mania – person			
	displays spontaneity, activity, has outbursts of exuberance, has heightened good			
humour and talkative and entertaining. They are often full of good ideas, plans				
	and have grand visions. They are full of energy; appear to be physically			
	inexhaustible.			
	Depression: are extremely despondent, melancholic and self deprecating. They			
	may be physically lethargic; struggle to think out simple problems. They believe			
	they are utterly worthless and have hopeless guilt.			
(b)	Evaluate what psychologists have found out about abnormal affect.	10		
	NOTE: any evaluative point can receive credit; the hints are for guidance only.			
	 points about defining and categorising abnormality; 			
	• cultural and individual differences;			
	 comparing and contrasting explanations of cause; 			
	implications of individual and society.			
(c)	Giving reasons for your answer, suggest ways in which abnormal affect can be overcome.	6		
	Most likely: ECT (electroconvulsive therapy)/electroplexy is very common.			
	Chemotherapy also common. Tranquilizers (e.g. chlorpromazine) for manic			
	episodes and lithium for both manic and depressive episodes.			
	Psychotherapy also a possibility but less common and less successful.

			the way in which a leader directs a group toward the attainme	nt of goals.		00
((b)		describe two theories of leadership.		6	60
			ories to choose from:			7
		1913) [2]	Iniversalist theories of leadership: [1] The <i>great man theory</i> (McGregor (1960) <i>Theory X and Theory Y</i>	W 000,		
		Universit	Behavioural theories of leadership [1] Researchers at Ohio Sta y Halpin and Winer (1957) suggested <i>initiating structure</i> and <i>ca</i>	onsideration		
	[2] Researchers at the University of Michigan identified <i>task-oriented behaviours</i> and <i>relationship-oriented behaviours</i> . This extended into Blake and Moulton's (1985) <i>Managerial Grid</i> .					
		confidence	Charismatic (or transformational) leaders have the determinatice and ability to inspire followers.	5,		
		(Fiedler,	Contingency theories of leadership: [1] Fiedler's contingency m 1967) [2] House's (1971) <i>path-goal theory</i> : [3] Vroom and Yetto	n (1973)		
		exchange		der-member		
	(c)		e one study of leader-worker interaction.		3	
		that it is	ly: Dansereau et. al. (1975) whose <i>leader-member exchange mo</i> the quality of interaction between leaders and group members	that is		
		when app	t. This model has received much acclaim due to the success it h lied to real life situations. E.g. Scandura and Graen (1984) fou	nd that		
		_	a training programme, where the aim was to improve the quality relationships, both group productivity and satisfaction increase htly.			

18 (a)	Explain, in your own words, what is meant by 'organisational work conditions'.	2
	Typically: any logical comment referring to the conditions of the working environment.	
(b)	Briefly describe one physical and one psychological condition of a work environment.	6
	PHYSICAL can include:	
	Illumination, temperature, noise, motion (vibration), pollution, aesthetic	
	factors (e.g. music and/or colour). Can also include workspace/office layout	
	PSYCHOLOGICAL can include:	
	Feelings of privacy or crowding, excessive or absence of social interaction,	
	sense of status or importance/anonymity or unimportance, feelings of job	
	satisfaction or alienation.	
	Any other appropriate work condition acceptable.	
(c)	Describe one way in which the negative effects of work	3
	environments could be reduced.	
	Most likely: by changing working week from one of above to more desirable	
	alternative.	

Section B		
19 (a)	Describe what psychologists have found out about interpersonal	8
	communication in organisations.	
	This is the passage of information between one person or group to another person or group. Candidates may well begin with a definition of communication and what it involves: sender, message and receiver (e.g. Hurier model for effective listening); encoding, channel and decoding.	
	Candidates may consider the varieties of communication: 'phone, face-to-	

Page 15	Mark Scheme	Sylla
	GCE A LEVEL – November 2005	9698

D 45	Mark Calcuma Call	20
Page 15	Mark Scheme Sylla	DA

vo Ar • •	mistrust; detensiveness; undercommunication. andidates can base their answers on communication networks (e.g. Leavitt's (1951)	A. Papa
(b) E\	entralised and de-centralised. valuate what psychologists have found out about interpersonal ommunication in organisations.	10
•	NOTE: any evaluative point can receive credit; the hints are for guidance only. the implications of various communications for speed; individual preference and/or satisfaction; comparing and contrasting alternative communication techniques; how psychologists gather evidence in this area.	
in	iving reasons for your answer, suggest strategies that can crease upward communication flow from workers to canagement.	6
su sy co re	achin (1980) suggests the expectations approach; Marchington (1987) aggests 'team-briefing'. Also: employee suggestion systems; grievance astems; open-door policies; employee surveys; participative decision making; arporate hotlines; brown bag meetings; skip-level meetings. Candidates may after to Tesser & Rosen's (1985) the MUM effect, the reluctance to tell apperiors of something bad.	

20 (a)	Describe what psychologists have found out about group behaviour in organisations.	8
	Wide question in that candidates can legitimately focus on one or more of:	
	Group processes such as cohesiveness, co-operation, competition;	
	Group decision-making	
	Group error such as groupthink and group polarisation.	
	Team roles and team building	
(b)	Evaluate what psychologists have found out about group	10
	behaviour in organisations.	
	NOTE: any evaluative point can receive credit; the hints are for guidance only.	
	 issues concerning generalisability; 	
	• the measures used to gain data;	
	 individual differences in types of groups; 	
	the usefulness of studying group processes.	
(c)	Using your psychological knowledge, suggest ways in which group	6
	conflict can be managed.	
	Most likely: encourage evaluation; promoting open enquiry; use sub-groups; admit	
	shortcomings; hold second-chance meetings; don't rush to a quick solution. But	
	any logical suggestion will suffice.
