PSYCHOLOGY

9990/42

Paper 4 Specialist Options: Application and Research Methods

February/March 2024

MARK SCHEME

Maximum Mark: 60

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the February/March 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of **36** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Social Science-Specific Marking Principles
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require *n* reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

2 Presentation of mark scheme:

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

3 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

Generic levels of response marking grids**Table A: AO2 Application**

The table should be used to mark the 10 mark ‘Plan a study’ questions (9, 10, 11 and 12).

Level	Description	Marks
5	<p>The response:</p> <ul style="list-style-type: none"> uses an appropriate method as required by the question. describes a good range of appropriate method-specific features with accurate detail. describes a good range of appropriate general methodological features with accurate detail. shows very good understanding and the plan is coherent and is sufficient for replication. clearly applies knowledge of psychological methodology and terminology involved in planning a study. Uses and shows good understanding of ethical guidelines. 	9–10
4	<p>The response:</p> <ul style="list-style-type: none"> uses an appropriate method as required by the question. describes a range of appropriate method-specific features in detail. describes a range of appropriate general methodological features with some in detail. shows good understanding and the plan is coherent. applies knowledge of psychological methodology and terminology involved in planning a study. uses ethical guidelines appropriately. 	7–8
3	<p>The response:</p> <ul style="list-style-type: none"> uses an appropriate method as required by the question. describes a range of appropriate method-specific features although these may lack detail. describes some general methodological features although these may lack detail. shows limited understanding and the plan has some coherence. applies some knowledge of psychological methodology and terminology involved in planning a study. refers to ethical guidelines. 	5–6
2	<p>The response:</p> <ul style="list-style-type: none"> uses an appropriate method as required by the question. identifies (lists) some appropriate method-specific features. identifies (lists) a limited range of appropriate general methodological features. shows little understanding and the plan would be difficult or impossible to replicate. makes some attempt to apply knowledge of psychological methodology and terminology involved in planning a study. ethical guidelines listed or absent. 	3–4

Level	Description	Marks
1	<p>The response:</p> <ul style="list-style-type: none">• may not use the method required by the question.• may not answer the question set.• identifies a few general and/or method-specific features and detail is limited.• shows very little understanding and the plan would be impossible to replicate.• makes a limited attempt to apply knowledge of psychological methodology and terminology involved in planning a study.	1–2
0	<ul style="list-style-type: none">• No response worthy of credit.• The candidate describes the study listed on the syllabus.• The plan is unethical.	0

Question	Answer	Marks
1	From the key study by Grant et al. (2008) on treating gambling disorder with drugs and placebo:	
1(a)	<p>Explain what is meant by a double-blind, placebo-controlled trial as used in this study.</p> <p>Syllabus: 1.3.3 Key study on treating gambling disorder with drugs and placebo: Grant et al. (2008).</p> <p>Marks: Double-blind: Award 2 marks for a detailed explanation. Award 1 mark for a partial explanation (definition). Placebo controlled: Award 2 marks for a detailed explanation. Award 1 mark for a partial explanation (definition).</p> <p>Answers may include (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> • double-blind: an experimental procedure where neither the participant nor the researcher is aware of which condition the participant is in (1 mark) so a participant could be in the nalmefene (or naltrexone) group or the control (placebo) group and not know which group they are in (2 marks) • placebo-controlled: a control group where no test medication is received but where the medication given has no actual effect, but the participant may think they are receiving the test medication (1 mark) so a participant could be in the nalmefene (or naltrexone) group or the control (placebo) group and not know which group they are in (2 marks). 	4
1(b)	<p>Suggest <u>one</u> effect if a double-blind trial had <u>not</u> been used in this study.</p> <p>Marks: Award 2 marks for an appropriate suggestion stated and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion identified but not applied.</p> <p>Answers may include (other appropriate responses to be credited). Note: 'effect' could be on anything, not just validity. Note: only one of the two possibilities below is required for 2 marks.</p> <ul style="list-style-type: none"> • participant bias: if a participant knows which group they are in, nalmefene (or naltrexone) group or the control (placebo) group, they might change their behaviour to support the aims of the study (or go against it) (2 marks). • experimenter bias: if an experimenter knows which group a participant is in nalmefene (or naltrexone) group or the control (placebo) group, they may bias their behaviour toward the participant to support the aims of the study (2 marks). 	2

Question	Answer	Marks
1(c)	<p>Explain <u>two</u> strengths of conducting placebo-controlled trials in studies of gambling disorder.</p> <p>Marks: up to 2 marks for each strength ×2 Award 2 marks for an appropriate strength stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited): Strengths:</p> <ul style="list-style-type: none"> • it is a control with a control group so there is a baseline to which the results of the experimental group can be compared (1 mark) and the effectiveness of the nalmefene (or naltrexone) on gambling disorder can be revealed (2 marks). • it is a placebo and so the participant will behave as if they are in the experimental group (1 mark) because they do not know whether they are in the nalmefene (or naltrexone) group or the control (placebo) group (2 marks) 	4

Question	Answer	Marks
2	Generalised anxiety disorder can be assessed using the GAD-7.	
2(a)	<p>Outline how answers are scored on the GAD-7 scale.</p> <p>Syllabus 1.4.1 Generalised Anxiety Disorder assessment (GAD-7).</p> <p>Award 2 marks for a detailed outline. Award 1 mark for a partial outline.</p> <p>Definitive answer:</p> <ul style="list-style-type: none"> • the ‘GAD score’ is calculated by assigning scores of 0 (not at all), 1 (several days), 2 (more than half the days), and 3 nearly every day, to all 7 questions (hence GAD-7). • a GAD-7 total score for the seven items ranges from 0 to 21. Scores represent: 0–5 mild anxiety, 6–10 moderate anxiety, 11–15 moderately severe anxiety and 15–21 severe anxiety. <p>Example: the GAD-7 has a four-point scale (1 mark) ranging from 0 not at all to 3 nearly every day (2 marks).</p>	2
2(b)	<p>Suggest how the validity of the GAD-7 could be tested.</p> <p>Marks: Award 2 marks for an appropriate suggestion and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion identified but not applied.</p> <p>Answers may include (other appropriate responses to be credited).</p> <p>Note: the study itself states ‘it has good criterion, construct, factorial and procedural validity’ and there are detailed paragraphs on each of these. This detail is NOT expected in the answer; this is a ‘suggest’ question and the GAD-7 doesn’t have a study to be included.</p> <p>Note: does not need to use the terms criterion validity or construct validity.</p> <ul style="list-style-type: none"> • criterion validity by comparing the GAD-7 to other measures of generalised anxiety (1 mark) and if the two scores have a strong correlation the GAD-7 could be said to be valid (2 marks) • construct validity by seeing if seeing if the GAD-7 matches up with theoretical ideas about what it is supposed to be measuring (1 mark) and if it does the GAD-7 could be said to be valid (2 marks). • ecological validity: does the scale apply to real life (1 mark) do the questions (on paper) reflect real life experiences of people (2 marks) • temporal validity: test the GAD-7 over time (1 mark) to see if the person shows any improvement (2 marks) 	2

Question	Answer	Marks
2(c)	<p>Explain <u>one</u> strength and <u>one</u> weakness of the GAD-7 scale.</p> <p>Marks: Up to 2 marks for each strength and up to 2 marks for each weakness: Award 2 marks for an appropriate strength/weakness stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength/weakness stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited): Strengths:</p> <ul style="list-style-type: none"> • the scale is easy to use / is not complex (1 mark) as there are only 7 questions and the same scoring is used for each item (2 marks) • the scale can apply to any form of disorder involving anxiety or anyone with feelings of anxiety (1 mark) because of the nature of the questions such as ‘trouble relaxing’ are deliberately general (2 marks) <p>Weaknesses:</p> <ul style="list-style-type: none"> • the time frame is ambiguous (1 mark) the scale only applies to the last two weeks, when there might have been an improvement from previously (2 marks) • the wording of the scale is ambiguous (1 mark) use of the term ‘several days’ for example (2 marks) 	4

Question	Answer	Marks
3	From the key study by North et al. (2003) on musical style and restaurant customers' spending:	
3(a)(i)	<p>Outline <u>two</u> variables within restaurant that were controlled, other than the music CDs.</p> <p>Syllabus: 2.1.2 Key study on musical style and restaurant customers' spending: North et al. (2003).</p> <p>Marks: Award 1 mark for each outline.</p> <p>Definitive answers:</p> <ul style="list-style-type: none"> • lighting (was kept at the same levels throughout the study) • decoration (was not changed) • temperature (was maintained at a constant temperature) • menu (was not changed, such as an increase in prices, or items) • the waitress, gathering data, was always the same <p>Note: any other aspect scores no marks (especially music).</p>	2
3(a)(ii)	<p>Describe how counterbalancing was used in this study.</p> <p>Marks: Award 2 marks for a detailed explanation. Award 1 mark for a partial explanation</p> <p>Definitive answer:</p> <ul style="list-style-type: none"> • a 'Latin square design' was used (1 mark) • each type of music was presented on each day of the week (1 mark) with any aspect/explanation about the table opposite (2 marks) • each week in the year was equivalent (e.g. no holidays) (1 mark) with any aspect/explanation about the table opposite (2 marks) <p>Note: independent measures design is incorrect. Question is counterbalancing.</p>	2
3(b)	<p>Suggest <u>one</u> effect if counterbalancing had <u>not</u> been used in this study.</p> <p>Marks: Award 2 marks for an appropriate suggestion stated and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion identified but not applied.</p> <p>Answers may include (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> • the day of the week might have been associated with a particular type of music and the result confounded (1 mark). Customers may have spent more money if classical music was always played on Saturday or Sunday rather than midweek (2 marks) • the day of the week might result in different spending amounts (1 mark) such as more spending at weekend and less on Monday or Tuesday (may only apply to UK). 	2

Question	Answer	Marks
3(c)	<p>Explain <u>two</u> strengths of controlling the music CDs.</p> <p>Marks: Up to 2 marks for each strength X2 Award 2 marks for an appropriate strength stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited): Strengths:</p> <ul style="list-style-type: none"> • controlling variables increases validity (1 mark) • DV is more likely to be due to the IV (1 mark) • no customer heard the same piece of music twice when in the restaurant. Two 76-minute CDs were prepared for each music condition, ensuring that no single piece of music was repeated for any single customer (+1 mark). • the volume of the music was kept constant so loudness could not attract attention. The music was played at a constant background volume on the restaurant's usual CD system (+1 mark) • the order of the music tracks was randomised. The restaurant's usual CD system, which held two CDs played them on a continuous, random program (+1 mark) 	4

Question	Answer	Marks
4	Menu item choice can be affected by both primacy and recency.	
4(a)	<p>Explain what is meant by primacy in relation to menu item choice.</p> <p>Syllabus: 2.2.2 the effect of primacy and recency and menu item position on menu item choice, including a study, e.g. Dayan and Bar-Hillel (2011).</p> <p>Marks: Award 1 marks for general explanation. Award +1 mark for relating to menu item choice.</p> <p>Definitive answer:</p> <ul style="list-style-type: none"> • when items are more likely to be recalled when they are at the beginning of a list (1 mark) people order items from a menu simply because they are the first thing that they see (1 mark). <p>Note: 1 mark each point; 2 marks for both.</p>	2
4(b)	<p>Suggest <u>one</u> feature of a menu that might affect item choice, other than primacy or recency.</p> <p>Syllabus: 2.2.2 menu design focusing on the features of menu design which have positive and negative impacts and ways to study this, including the use of eye-tracking, e.g. Pavesic (2005).</p> <p>Marks: Award 2 marks for an appropriate suggestion and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion but not applied.</p> <p>Answers may include (other appropriate responses to be credited).</p> <ul style="list-style-type: none"> • use of fonts, bold print, highlights, italics, etc. (1 mark). How these would apply e.g. highlighting would make an item stand out compared to non-highlighted items (2 marks). • use of eye magnets (1 mark) such as ‘slashes’, arrows, i.e. any elaboration (2 marks) 	2

Question	Answer	Marks
4(c)	<p>Explain <u>one</u> strength and <u>one</u> weakness of conducting a study on menu item choice in a laboratory.</p> <p>Marks: Up to 2 marks for each strength and up to 2 marks for each weakness: Award 2 marks for an appropriate strength/weakness stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength/weakness stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited):</p> <p>Strengths:</p> <ul style="list-style-type: none"> • variables can be controlled (1 mark) the items on the menu can be exactly the same and in the same order; (2 marks) • all situational variables can be controlled (1 mark) such as temperature, lighting, etc. so focus on menu items is not influenced by any other factor (2 marks) <p>Weaknesses:</p> <ul style="list-style-type: none"> • the participant is in an artificial environment (1 mark) and is not choosing a menu item in a restaurant because they are hungry (2 marks) • artificial because of absence of typical restaurant features (1 mark) such as the sight and smell of food (2 marks) • in a laboratory too many variables might be controlled (1 mark) and so viewing and choosing menu items is artificial (2 marks) • the possibility of demand characteristics could be enhanced (1 mark) and so viewing and choosing menu items is artificial (2 marks). 	4

Question	Answer	Marks
5	From the key study by Yokley and Glenwick (1984) on improving medical adherence using community interventions:	
5(a)(i)	<p>Describe <u>one</u> cause of confounding identified by Yokley and Glenwick.</p> <p>Syllabus: 3.2.3: Key study on improving medical adherence using community interventions: Yokley and Glenwick (1984).</p> <p>Marks: Award 2 marks for a detailed description. Award 1 mark for a partial description.</p> <p>Definitive answer:</p> <ul style="list-style-type: none"> • confounding may have resulted if individual children were targeted and children in the same family received different mail prompts emphasising different things. 	2
5(a)(ii)	<p>Explain what was done in the study by Yokley and Glenwick to prevent confounding.</p> <p>Marks: Award 2 marks for a detailed explanation. Award 1 mark for a partial explanation.</p> <p>Definitive answer:</p> <ul style="list-style-type: none"> • rather than individual children, individual families were targeted (1 mark) which meant that only one prompt was sent to each family (2 marks) • randomly assigned to one of six conditions. 	2
5(b)	<p>Suggest <u>one</u> strategy for promoting health that could be used to improve medical adherence, other than the strategy used by Yokley and Glenwick.</p> <p>Marks: Award 2 marks for an appropriate suggestion and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion identified but not applied.</p> <p>Answers may include (other appropriate responses to be credited).</p> <ul style="list-style-type: none"> • providing information on the benefits of medical adherence (1 mark) such as that used by Lewin (heart health manual) to tell people why they need to adhere (2 marks) • using fear arousal on the problems associated with medical non-adherence (1 mark) such as the strategy used by Janis and Feshback to scare people into adhering (2 marks) 	2

Question	Answer	Marks
5(c)	<p>Explain <u>two</u> strengths of conducting field experiments to study participation in immunisation interventions in communities.</p> <p>Marks: Up to 2 marks for each strength ×2 Award 2 marks for an appropriate strength stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited): Strengths:</p> <ul style="list-style-type: none"> • the setting is natural/high ecological validity (1 mark) the participants receive the mailing about participation in immunisation in their own home – just like any other mail (2 marks) • the participant behaves naturally because they do not know they are participating in a study (1 mark) the participants decide what to do about immunisation reflecting their beliefs about immunisation (2 marks) 	4

Question	Answer	Marks
6(a)	<p>Explain what is meant by 'mirror treatment' for phantom limb pain.</p> <p>Syllabus: 3.3.1 functions of pain; types of pain: acute and chronic pain. Focus on phantom limb pain and mirror treatment to include a case study, e.g. MacLachlan et al. (2004).</p> <p>Marks: Award 2 marks for a detailed explanation. Award 1 mark for a partial explanation.</p> <p>Answers may include (other appropriate responses to be credited): Note: answers may be general, or they may involve a description of the case of Alan (MacLachlan et al.)</p> <ul style="list-style-type: none"> • it involves the use of a mirror (mirror box). The patient moves the good limb and observes the reflection. As the patient sees the good hand/leg moving it appears as if the phantom limb is also moving. If there is no pain in the good limb, there is no pain in the phantom limb. • Alan sits in front of a mirror and performs various exercises, such as bending his legs. The exercises are repeated. Over time the process is repeated without a mirror. 	2
6(b)	<p>Suggest <u>one</u> biological/biochemical way in which phantom limb pain can be treated.</p> <p>Marks: Award 2 marks for an appropriate suggestion stated and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion identified but not applied.</p> <p>Answers may include (other appropriate responses to be credited).</p> <ul style="list-style-type: none"> • biochemical: the use of biochemical treatments (drugs) to relieve pain (1 mark). Neurontin is a medication used where there is nerve damage (can help manage certain epileptic seizures and relieve pain for some conditions) (2 marks). • alternative: TENS (transcutaneous electrical nerve stimulation) (1 mark). TENS therapy involves the use of low-voltage electric currents to the skin which release endorphins ('biological') which help to manage pain (2 marks). <p>Note: 0 marks psychological: attention diversion, non-pain imagery or cognitive redefinition.</p>	2

Question	Answer	Marks
6(c)	<p>Explain <u>two</u> strengths of mirror treatment for phantom limb pain.</p> <p>Marks: Up to 2 marks for each strength ×2 Award 2 marks for an appropriate strength stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited): Strengths:</p> <ul style="list-style-type: none"> • the treatment does not have side effects / addiction (1 mark) as might occur with biochemical treatments (2 mark) • the treatment does not involve creating pain (1 mark) as might occur with stimulation therapies such as TENS (2 marks) • mirror treatment has been shown to be effective (1 mark) e.g. in the study by MacLachlan et al (2004) on Alan; also in the study by Ramachandran (1998) (2 marks) • the treatment can be applied by the person with phantom limb pain at home (1 mark) and so can be applied actively by the person whenever they wish with relief from their phantom limb pain (2 marks). 	4

Question	Answer	Marks
7	From the key study by Claypoole and Szalma (2019) on electronic performance monitoring.	
7(a)	<p>Describe how the <u>two</u> forms of electronic presence were used in this study.</p> <p>Syllabus: 4.3.2 Key study looking at concentration levels when being monitored: Claypoole and Szalma (2019), focus on experiment 1, specifics of methodology for experiment 2 will not be needed.</p> <p>Marks: Award 2 marks for a detailed description. Award 1 mark for a partial description.</p> <p>Marks: Award up to 2 marks for details of ‘webcam’ and 2 marks for ‘video recorder’.</p> <p>Note: answers can be how it was set up or how it was used.</p> <p>Answers to include (quote from study): “In the Electronic Presence condition there were two forms of electronic presence, a webcam and a video recorder”.</p> <ul style="list-style-type: none"> • the webcam was placed on top of the computer screen (1 mark) and was used to “monitor the participant's performance and engagement while they completed the task”, as explicitly stated to the participants (1 mark). • the video recorder was placed on a tripod, approximately 110 cm tall, one metre behind the participant at a 45-degree angle (1 mark) to record the participant's performance so that it could be evaluated later (1 marks). <p>Note: award 1 mark if both forms are identified. Note: 0 marks for ‘CCTV’ which is too general.</p>	4
7(b)	<p>Suggest <u>one</u> way in which worker performance could be monitored, other than electronic presence.</p> <p>Marks: Award 2 marks for an appropriate suggestion and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion identified but not applied.</p> <p>Answers may include (other appropriate responses to be credited).</p> <ul style="list-style-type: none"> • observation (covert or overt) could be used by hiding a video camera (1 mark) for example, so a recording is taken of natural worker behaviour (2 marks) • questionnaire e.g. closed where workers are asked closed questions about their performance (1 mark) so each worker could be compared for their work efficiency (2 marks). • also possible: time and motion study (Taylor); or by interview. 	2

Question	Answer	Marks
7(c)	<p>Explain <u>one</u> strength and <u>one</u> weakness of conducting a study on electronic performance monitoring using students as participants.</p> <p>Marks: Up to 2 marks for each strength and up to 2 marks for each weakness. Award 2 marks for an appropriate strength/weakness stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength/weakness stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited):</p> <p>Strengths:</p> <ul style="list-style-type: none"> • students may be readily available; sample is standardised as all participants are students (1 mark) so different variables/types of monitoring can be changed, trialled/repeated without affecting ‘real’ workers or organisations (2 marks) • conducting a study on students can be a pilot study to test for strengths/weaknesses (1 mark) before rolling it out so workers in different organisations can be monitored (2 marks) <p>Weaknesses:</p> <ul style="list-style-type: none"> • students may respond to demand characteristics because they know they are participating in a study (1 mark) about electronic performance measuring (2 marks). • students may have very little or no experience in ‘real’ work environments (1 mark) and so any results may not be generalised to ‘real’ workers in different organisations (2 marks) 	4

Question	Answer	Marks
8(a)	<p>Describe how data was collected in <u>one</u> study about the impact of the design of the work environment on open plan offices (e.g. Oldham and Brass, 1979).</p> <p>Syllabus: 4.4.1 impact of the design of the work environment focusing on open plan offices, including a study, e.g. Oldham and Brass (1979). Marks: Award 2 marks for a detailed description. Award 1 mark for a partial description.</p> <p>Answers may include (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> • a longitudinal study taking measures over time (1 mark) which could be baseline (pre-move), one week after move, six weeks after move (2 marks). • closed questionnaires with a 7-point scale (1 mark) to assess differences in autonomy, skills variety or any other job characteristic (2 marks) • participants were interviewed. Employees described the new office space as a 'fishbowl,' 'cage,' or 'warehouse', reflecting on an inability to concentrate, to develop close friendships, and to complete a job. It was impossible in the open office to engage in a private conversation either with co-workers or with supervisors. 	2
8(b)	<p>Suggest how <u>one</u> job characteristic that might be affected by a move to a different type of office.</p> <p>Marks: Award 2 marks for an appropriate suggestion and applied to study with detail / elaboration / example. Award 1 mark for an appropriate suggestion identified but not applied.</p> <p>Answers may include (other appropriate responses to be credited): Hackman and Oldham (1976) list the following job characteristics:</p> <ul style="list-style-type: none"> • skills variety • task identity • task significance • responsibility (autonomy) • knowledge of outcome (feedback) <p>Can add:</p> <ul style="list-style-type: none"> • concentration • friendship opportunities (social relations) 	2

Question	Answer	Marks
8(c)	<p>Explain <u>one</u> strength and <u>one</u> weakness with the way that data was collected in the study you described in part (a).</p> <p>Marks: Up to 2 marks for each strength and up to 2 marks for each weakness. Award 2 marks for an appropriate strength/weakness stated and applied as required by the question with detail / elaboration / example. Award 1 mark for an appropriate strength/weakness stated but not applied.</p> <p>Answers may include (other appropriate responses to be credited):</p> <p>Strengths:</p> <ul style="list-style-type: none"> • the same participants might be measured over time (1 mark) measures can be taken in the same participants before the office move, just after the move and again after a longer period of time (2 marks) • the same measures could be repeated with the same participants which makes the study reliable. (1 mark) <p>Weaknesses:</p> <ul style="list-style-type: none"> • participants may begin the study but drop out (1 mark) a worker might be measured before the move, but leave the company before the other two measures can be taken because they don't like open-plan offices (2 marks) • once the study has started changes to the design cannot be made (1 mark) so if a new variable appears after the move it cannot be included as no baseline was taken before the move (2 marks) 	4

Question	Answer	Marks		
Section B				
9(a)	<p>Plan a covert observation to investigate the effectiveness of covert sensitisation for treating kleptomania.</p> <p>Your plan must include details about:</p> <ul style="list-style-type: none"> • structured or unstructured observation • steps for making the study reliable. <p>Use Table A: AO2 Application to mark candidate responses to this question. Credit both general features and specific features of the plan.</p> <table border="1" data-bbox="292 656 1311 1102" style="width: 100%; border-collapse: collapse;"> <tr> <td data-bbox="292 656 802 1102" style="width: 50%; vertical-align: top;"> <p>The specific features of the plan <u>should</u> include:</p> <ul style="list-style-type: none"> • structured or unstructured • covert or overt • controlled or naturalistic • participant or non-participant • number of observers (inter-rater reliability) • behavioural categories • could include: event or time sampling </td> <td data-bbox="802 656 1311 1102" style="width: 50%; vertical-align: top;"> <p>The general features of the plan <u>should</u> include (if appropriate):</p> <ul style="list-style-type: none"> • sample and sampling technique • ethical guidelines • a procedure • type of data, analysis of data*, use of descriptive statistics • an aim or hypothesis (directional or non-directional)/null hypothesis • steps for making the study valid and reliable </td> </tr> </table>	<p>The specific features of the plan <u>should</u> include:</p> <ul style="list-style-type: none"> • structured or unstructured • covert or overt • controlled or naturalistic • participant or non-participant • number of observers (inter-rater reliability) • behavioural categories • could include: event or time sampling 	<p>The general features of the plan <u>should</u> include (if appropriate):</p> <ul style="list-style-type: none"> • sample and sampling technique • ethical guidelines • a procedure • type of data, analysis of data*, use of descriptive statistics • an aim or hypothesis (directional or non-directional)/null hypothesis • steps for making the study valid and reliable 	10

Question	Answer	Marks								
10(b)	For <u>one</u> piece of psychological knowledge on which your plan is based:									
10(b)(i)	<p>Describe this psychological knowledge.</p> <p>Syllabus: 2.2.1 wayfinding in shopping malls; factors affecting wayfinding such as signs and you are here maps, including a study, e.g. Dogu and Erkip (2000).</p> <p>Answers are likely to include (other appropriate responses to be credited): Note: The study by Dogu and Erkip (2000) was a case study conducted in Turkey. This article examines the factors that affect wayfinding behaviour of individuals in a shopping mall and explains how their behaviours are influenced by factors such as building configuration, visual accessibility, circulation systems, and signage. ‘You are here’ maps are said to affect wayfinding. Participants in the mall completed questionnaires with closed questions such as ‘Every time I turn a corner, I know which direction I am facing. Answer choices included: always/sometimes/never. The results show that people did not find the signage system sufficient. Although they found the mall an easy setting from a wayfinding point of view, they still required better solutions to find specific destinations such as telephone booths, restrooms, or stores located in parts of the building that were not visually accessible.</p> <table border="1" data-bbox="290 1021 1299 1346"> <thead> <tr> <th>Marks</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3–4</td> <td>The knowledge is appropriate. 0	No creditable response											
Example	<ul style="list-style-type: none"> • with an independent design there is no control over participant variables (1 mark) related to study (2 marks) • a related design would not work because the same participant would do two (or more) conditions and the effect of the first might influence the second (and third) (1 mark) related to study (2 marks) • with a repeated measures design there is the possibility of order effects (1 mark) related to study (2 marks) • with a repeated measures design there is the possibility that the participant is more likely to work out the aim of the experiment (1 mark) related to study (2 marks) 											

Question	Answer	Marks
11(c)(iii)	<p>Explain <u>one</u> reason for your choice of directional or non-directional hypothesis.</p> <p>Candidates must use the directional/non-directional hypothesis stated in (a).</p> <p>Award 2 marks if an appropriate reason is given and justified. Award 1 mark if an appropriate reason is given but not justified. Award 0 marks if it is not a directional or non-directional hypothesis or it does apply to the plan.</p> <p>Example:</p> <ul style="list-style-type: none">• A directional hypothesis was chosen because it was predicted that X would score more/be better/etc. than Y (1 mark) reason related to plan (2 marks)• A non-directional hypothesis was chosen because it was predicted that there would be a difference between X and Y (1 mark) X reason related to study (2 marks).	2

Question	Answer	Marks		
12	Within each 24-hour period, workers in different offices have different work patterns: workers in Office A work 8 hours (9am–5pm); workers in Office B work 8 hours flexitime.			
12(a)	<p>Plan a study using an interview to investigate which work pattern gives workers more job satisfaction.</p> <p>Your plan must include details about:</p> <ul style="list-style-type: none"> • interview technique • question scoring/interpretation. <p>Use Table A: AO2 Application to mark candidate responses to this question. Credit both general features and specific features of the plan.</p> <table border="1" data-bbox="288 719 1310 1167"> <tbody> <tr> <td data-bbox="288 719 799 1167"> <p>The specific features of the plan <u>should</u> include:</p> <ul style="list-style-type: none"> • interview technique (telephone or face-to-face) • interview format (structured, unstructured, semi-structured). • question format (open and/or closed) • examples of questions • question scoring/interpretation • number of questions </td> <td data-bbox="799 719 1310 1167"> <p>The general features of the plan <u>should</u> include (if appropriate):</p> <ul style="list-style-type: none"> • sample and sampling technique • ethical guidelines • a procedure • type of data, analysis of data, use of descriptive statistics • an aim or hypothesis (directional or non-directional)/null hypothesis • steps for making the study valid and reliable </td> </tr> </tbody> </table>	<p>The specific features of the plan <u>should</u> include:</p> <ul style="list-style-type: none"> • interview technique (telephone or face-to-face) • interview format (structured, unstructured, semi-structured). • question format (open and/or closed) • examples of questions • question scoring/interpretation • number of questions 	<p>The general features of the plan <u>should</u> include (if appropriate):</p> <ul style="list-style-type: none"> • sample and sampling technique • ethical guidelines • a procedure • type of data, analysis of data, use of descriptive statistics • an aim or hypothesis (directional or non-directional)/null hypothesis • steps for making the study valid and reliable 	10
<p>The specific features of the plan <u>should</u> include:</p> <ul style="list-style-type: none"> • interview technique (telephone or face-to-face) • interview format (structured, unstructured, semi-structured). • question format (open and/or closed) • examples of questions • question scoring/interpretation • number of questions 	<p>The general features of the plan <u>should</u> include (if appropriate):</p> <ul style="list-style-type: none"> • sample and sampling technique • ethical guidelines • a procedure • type of data, analysis of data, use of descriptive statistics • an aim or hypothesis (directional or non-directional)/null hypothesis • steps for making the study valid and reliable 			

Question	Answer	Marks								
12(b)	For <u>one</u> piece of psychological knowledge on which your plan is based:									
12(b)(i)	<p>Describe this psychological knowledge.</p> <p>Syllabus: 4.4.2 design of work: shiftwork: rapid rotation and slow rotation, on-call and flexi-time including definitions and examples of each.</p> <p>Answers are likely to include (other appropriate responses to be credited): (1) work hours: (a) in UK for example, people work 9–5 because of ‘convention’ that is the way it has always been and everyone travels to and from at the same time of day. Also fits in with school hours making society coherent and organised. (b) A flexi-time system means people work the same hours per week but can work whenever they choose (e.g. 7 am to 3 pm or 11 am to 7 pm). This might allow a person to organise their own time. It might allow working 3 days per week and taking two days off work. (2) job satisfaction: can result if workers choose their own work hours (a) could include Herzberg’s ‘motivational factors (e.g. responsibility where workers can be responsible for the pattern of hours they work); (b) Hackman and Oldham’s job characteristics.</p> <table border="1" data-bbox="290 918 1300 1249"> <thead> <tr> <th>Marks</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3–4</td> <td>The knowledge is appropriate. Relevant points are correctly described in good detail.</td> </tr> <tr> <td>1–2</td> <td>Basic points are identified with some elaboration and understanding. The answer lacks detail (a sentence or two).</td> </tr> <tr> <td>0</td> <td>No creditable response</td> </tr> </tbody> </table>	Marks	Description	3–4	The knowledge is appropriate. Relevant points are correctly described in good detail.	1–2	Basic points are identified with some elaboration and understanding. The answer lacks detail (a sentence or two).	0	No creditable response	4
Marks	Description									
3–4	The knowledge is appropriate. Relevant points are correctly described in good detail.									
1–2	Basic points are identified with some elaboration and understanding. The answer lacks detail (a sentence or two).									
0	No creditable response									
12(b)(ii)	<p>Explain how you used <u>two</u> features of this psychological knowledge to plan your study.</p> <p>Candidates should explain how the psychological knowledge described in (b)(i) has informed their plan in part (a).</p> <p>For each feature:</p> <table border="1" data-bbox="290 1550 1300 1908"> <thead> <tr> <th>Marks</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2</td> <td>Suitable answer that relates a feature and explains how the feature was used, expanded or modified to make it appropriate to the plan. The knowledge has clearly been applied to the plan.</td> </tr> <tr> <td>1</td> <td>Basic answer that identifies a feature</td> </tr> <tr> <td>0</td> <td>No creditable response</td> </tr> </tbody> </table>	Marks	Description	2	Suitable answer that relates a feature and explains how the feature was used, expanded or modified to make it appropriate to the plan. The knowledge has clearly been applied to the plan.	1	Basic answer that identifies a feature	0	No creditable response	4
Marks	Description									
2	Suitable answer that relates a feature and explains how the feature was used, expanded or modified to make it appropriate to the plan. The knowledge has clearly been applied to the plan.									
1	Basic answer that identifies a feature									
0	No creditable response									

Question	Answer	Marks										
12(c)(i)	<p>Explain <u>one</u> reason for your choice of interview technique.</p> <p>Candidates must use the choice of interview technique stated in (a).</p> <p>Award 2 marks if an appropriate reason is given and justified. Award 1 mark if an appropriate reason is given but not justified.</p> <p>Example:</p> <ul style="list-style-type: none"> • face-to-face and then non-verbal responses can be noted by the interviewer (1 mark) related to plan (2 marks) • face-to-face because it is much more 'personable' than talking on a telephone (1 mark) related to plan (2 marks) • telephone because the interview will be short and to the point (1 mark) related to plan (2 marks) • telephone because a much wider sample can be obtained; because there is no travelling involved by either interviewer or interviewee (1 mark) related to plan (2 marks) 	2										
12(c)(ii)	<p>Explain <u>one</u> weakness of your choice of interview technique.</p> <p>Candidates must use the interview technique stated in (c)(i)</p> <table border="1" data-bbox="292 994 1300 1491"> <thead> <tr> <th data-bbox="292 994 443 1059">Marks</th> <th data-bbox="443 994 1300 1059">Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="292 1059 443 1124">2</td> <td data-bbox="443 1059 1300 1124">Weakness is given and applied to the plan</td> </tr> <tr> <td data-bbox="292 1124 443 1189">1</td> <td data-bbox="443 1124 1300 1189">Weakness is given without being applied to the plan</td> </tr> <tr> <td data-bbox="292 1189 443 1254">0</td> <td data-bbox="443 1189 1300 1254">No creditable response</td> </tr> <tr> <td data-bbox="292 1254 443 1491">Example</td> <td data-bbox="443 1254 1300 1491"> <ul style="list-style-type: none"> • face-to-face might result in answers which are not truthful because the interviewer can see the interviewee (1 mark) related to plan (2 marks) • a telephone interview might mean the person may 'hang up'; the person may not want to spend sufficient time to complete the interview (1 mark) related to study (2 marks) </td> </tr> </tbody> </table>	Marks	Description	2	Weakness is given and applied to the plan	1	Weakness is given without being applied to the plan	0	No creditable response	Example	<ul style="list-style-type: none"> • face-to-face might result in answers which are not truthful because the interviewer can see the interviewee (1 mark) related to plan (2 marks) • a telephone interview might mean the person may 'hang up'; the person may not want to spend sufficient time to complete the interview (1 mark) related to study (2 marks) 	2
Marks	Description											
2	Weakness is given and applied to the plan											
1	Weakness is given without being applied to the plan											
0	No creditable response											
Example	<ul style="list-style-type: none"> • face-to-face might result in answers which are not truthful because the interviewer can see the interviewee (1 mark) related to plan (2 marks) • a telephone interview might mean the person may 'hang up'; the person may not want to spend sufficient time to complete the interview (1 mark) related to study (2 marks) 											

Question	Answer	Marks
12(c)(iii)	<p>Explain <u>one</u> reason for your choice of question scoring/interpretation.</p> <p>Candidates must use the question scoring/interpretation stated in (a).</p> <p>Award 2 marks if an appropriate reason is given and justified. Award 1 mark if an appropriate reason is given but not justified.</p> <p>Example:</p> <ul style="list-style-type: none">• A (n-point) scale was used to keep the answer choice simple for participants because each participant's score could be compared (1 mark) related to plan (2 marks).• yes/no (don't know) answers were used to keep the answer choice simple for participants yet provide quantitative data for statistical analysis• the answers gave qualitative data so was coded by raters/judges to 'convert' into quantitative data for statistical analysis (1 mark) related to study (2 marks)	2
