THINKING SKILLS 9694/22

Paper 2 Critical Thinking

October/November 2018

MARK SCHEME
Maximum Mark: 45

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2018 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit
 is given for valid answers which go beyond the scope of the syllabus and mark scheme,
 referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)	It is a plausible account of what happened from both an expert [1] and an eye-witness [1]. However, he has a vested interest in giving an explanation that exonerates him from a charge of risky flying [1]. His statement lacks corroboration [1]. His explanation is weakened by the impression of recklessness revealed in Source D [1]. We do not know if the claim of loss of power can be verified [1]. If it can be, reliability is increased as he would not make this claim if he thought it could be easily falsified [1].	3
1(b)	 1 mark for each reason. It is from an expert source. It is from a neutral source. It offers a possible explanation for the incident – the aircraft is old. It offers a possible explanation for the incident – the aircraft is being pushed to its limit. It reveals the amount of discretion given to organisers and pilots, giving them opportunities to take risks. 	3
1(c)	The relevance cannot be determined/of little relevance [1]. Whilst some retired pilots participate in air shows we cannot infer from this that they are the only people who do so [1]. The pilot of the plane may be a younger pilot [1] meaning the statement would have no relevance [1]. The statement in Source D suggests he is not a retired pilot – if he was he would not be tempted by a bribe [1]. Even if he is an ex-commercial pilot this experience might be irrelevant to handling a fighter/military aircraft [1] If the pilot is of the type described in Source E, then that source is relevant because it offers an explanation for why he might be culpable [1] due to a reckless attitude.	3

Question		Answer	Marks
1(d)	Level 3 5–6 marks	A strong answer, which provides a reasoned argument including thorough evaluation of all or most of the evidence to support an acceptable conclusion in terms of probability and evaluates the plausibility of at least one alternative conclusion.	6
	Level 2 3–4 marks	An answer which evaluates some of the evidence, draws an acceptable conclusion in terms of probability and may mention the plausibility of at least one alternative conclusion.	
	Level 1 1–2 marks	A weak answer, which refers to some of the evidence, possibly including a simple evaluative comment. The conclusion may be unstated or over-stated.	
	Level 0 0 marks	No credit-worthy material.	
	Indicative cor	ntent	
	Loss of poPilot errorFailure toThe pilot of	onclusions are: ower/engine failure caused the incident caused the incident follow the regulations caused the incident. leliberately performed a dangerous manoeuvre. I C give grounds for believing engine failure was the cause of

Question	Answer	Marks
2(a)	No [1]. We would need to know the per capita GDP before we could conclude this [1]. If the population of Tuvalu is very low then the per capita GDP could be high [1]. However, even per capita GDP is not a reliable indicator of individual income [1]. Rich businesses could generate a high per capita GDP but this might only benefit a small elite minority [1].	2
2(b)	 2 marks for each developed answer / 1 for an undeveloped answer, for example: In the area of low population density, the shops etc. are likely to be too far away to walk so cars are more necessary / high density, nearby, less necessary. Alternative forms of transport are less available in the area of low population density. In the high density area traffic congestion means cars are not very useful, whereas public transport is faster and more efficient. Cars are cheaper to buy/run in the first area, so car ownership is higher because(explanation needed for 2 marks) Those on higher incomes may prefer private hire of transport to ownership. The general cost of living could be lower in the first area and higher in the second. This could mean disposable income is actually higher in the first area. 	4
2(c)	Yes [1]. The definition for malnutrition in Source C entails a person not getting enough of the vitamins, minerals and other nutrients that the body needs [1]. It may be possible to eat a diet that makes you fat but fails to provide these [1]. In this case one could be obese but still malnourished [1].	3

Question	Answer	Marks
2(d)	Notes for the guidance of markers	
	Simple supported conclusion 1 or nuanced conclusion 2	
	+ <u>use</u> of 1 source +1 or <u>use</u> of all or most (2 or more) sources of evidence +2 not just mentioning or summarizing or comprehension	
	+ critical evaluation of evidence +1 or (more than one case) +2	
	+ good inferential reasoning +1 or (more than one case) +2 not speculation	
	+ personal thinking +1	

Question	Answer	Marks
3(a)	2 marks: the alarm is an unnecessary evil.1 mark: There are many necessary evils in the modern world, but the alarm is an unnecessary evil.	2
3(b)	 1 mark for each of the following, to a maximum of 3 marks: The only effect of these devices is to create a loud and annoying noise. Alarms are ineffective. they are useless. This shows that alarms are unnecessary. Productivity is significantly affected Allow one significant omission or addition in each case.	3

Question	Answer	Marks
3(c)	Marks for each evaluative point as follows, up to a maximum of 5 marks:	5
	2 marks: Valid evaluative point, clearly expressed. 1 mark: Weak attempt at a valid evaluative point.	
	Paragraph 1	
	Flaw – generalisation from alarms designed to prevent theft to all alarms e.g. smoke alarms.	
	Paragraph 2	
	 Flaw – this conflates people in general ignoring an alarm with a failure of law enforcement agencies who have a duty to respond to an alarm. Flaw – generalisation from one example. 	
	Paragraph 3	
	 Flaw – circular argument: alarms are not useful, so they are useless. Flaw – restricting the options to useless and essential. Flaw – conflation of useful with essential. 	
	Paragraph 4	
	 Assumption – theft of the car is the only relevant crime; alarms still a way to prevent theft of things from the car. Assumption – there was no other reason why car theft declined (also expressible as a post hoc flaw). Assumption – all cars have immobiliser technology; older cars will not Flaw – generalisation from car alarms to all alarms. Flaw – confuses notion of immobilisers being better with alarms being unnecessary. Whilst not as good as immobilisers, alarms may have had some use. 	
	Paragraph 5	
	 Assumption – enough work must be office-based to affect productivity. Assumption – exposure to cold and wet causes flu and colds. Assumption – a significant proportion of these cases of cold and flu require professional medical care. Flaw – inconsistency with Para 1 point that most people ignore alarms Slippery slope – response to fire alarms leads to deaths in emergency units.
