## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

## **BIOLOGY**

Paper 6 Alternative to Practical

May/June 2006

Candidates answer on the Question Paper. No Additional Materials are required

1 hour

Candidate Name		
Centre Number	Candidate Number	

## **READ THESE INSTRUCTIONS FIRST**

Write Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN THE BARCODE.

DO NOT WRITE IN THE GREY AREAS BETWEEN THE PAGES.

Answer all questions.

The number of marks is given in brackets [ ] at the end of each question or part question.

For Examiner's Use

3		
Total		

1 Fig.1.1 shows a diagram of a groundnut plant, Arachis hypogaea.

The flower stalks grow downwards so that the fruits develop below the soil surface.

Fig. 1.2 shows the mature fruits, one of which has been cut open.

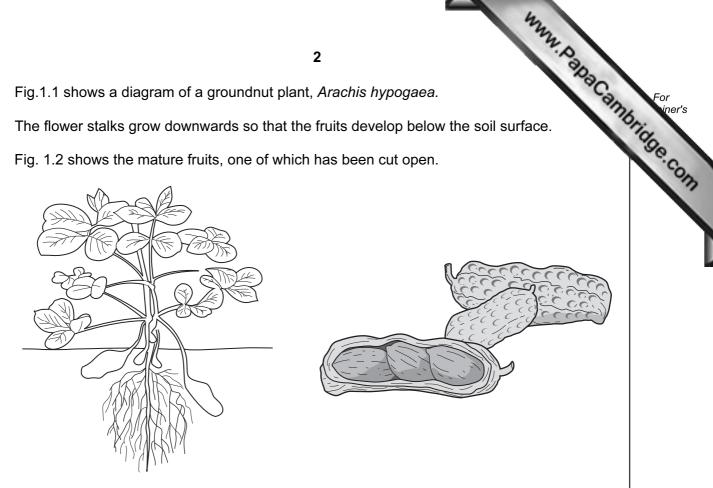

Fig. 1.1 Fig. 1.2

(a)	(i)	Make a large, labelled drawing of the open fruit and its contents.	Cambr	For iner's
	(ii)	Measure the length of your drawing.  Measure the length of the same structure in Fig. 1.2.  Calculate the magnification of your drawing.		
		Show your working.  Magnification	[3]	

**(b)** A student investigated the energy content of a seed.

www.PapaCambridge.com A seed was weighed and its mass recorded in Table 1.1. The seed was firmly attached to the end of a mounted needle. A large test tube containing 20 cm<sup>3</sup> of water was held in a clamp stand, with a thermometer and a stirrer. The apparatus is shown in Fig. 1.3.

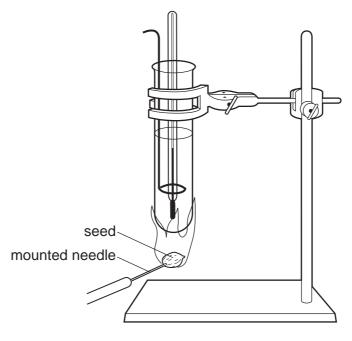

Fig. 1.3

- The temperature of the water at the start was recorded in Table 1.1.
- The seed was set alight by placing it in a flame for a few seconds.
- The burning seed was held under the test tube until the seed was completely burnt.
- The water was stirred immediately. The highest temperature of the water was recorded in Table 1.1.

Table 1.1

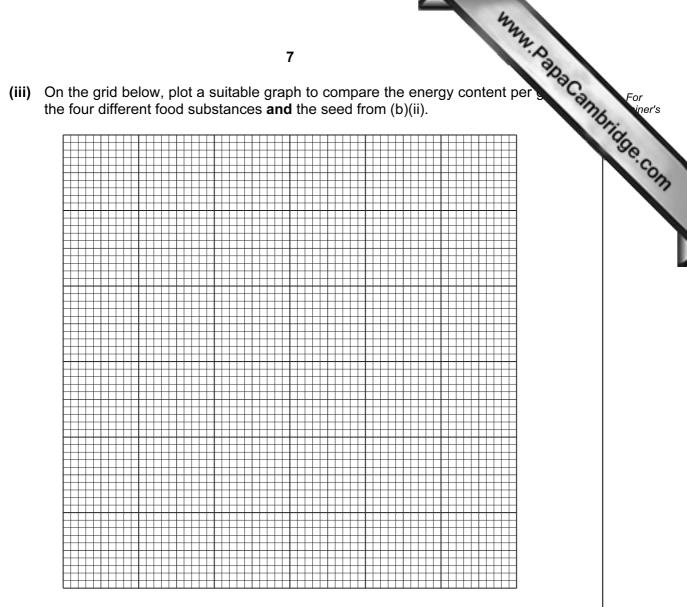

(i) Complete	e Table 1.1 by c	<b>5</b> calculating the rise	e in temperature	MMN. Pall	For iner's
		Table 1.	.1		iner's
mass of seed / g	volume of water / cm <sup>3</sup>	temperature at the start / °C	highest temperature / °C	rise in temperature / °C	Secon
0.5	20	29	79		

The energy contained in the seed can be calculated using the formula below.

(ii)	Using the formula calculate the energy content of the seed.
	Show your working.

Energy content	kJ q <sup>-1</sup>	[2]
Energy Content	kJ Y	[4]

The same method was used to find the energy content of some food substance results are shown in Table 1.2.  Table 1.2  food mass of food starting final rise in temperature / temperatur						
food substance	mass of food burnt / g	starting temperature / °C	final temperature / °C	rise in temperature / °C	energy content /kJg <sup>-1</sup>	
starch	0.62	31	65	34	4.61	
sugar	0.54	30	59	29	4.51	
fat	0.56	30	90	60	9.00	
protein	0.40	31	52	21	4.41	

	(vi)	Use this information to suggest the main food substance present in the seed.	[4]
			[1]
(c)	Des	scribe how you would test for the presence of reducing sugars in a seed.	
			[3]

[Total: 19 marks]

Fig. 2.1 shows a young bean seedling which had been grown in the dark and then 2 horizontally on the surface of some damp soil.

The seedling was kept well watered and exposed to the light for 2 days. Fig. 2.2 shows the seedling after 2 days.

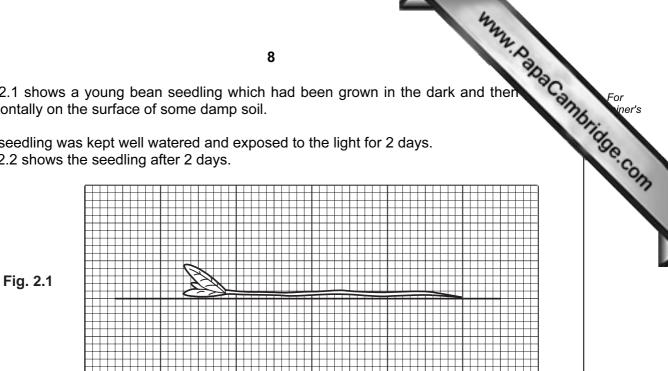

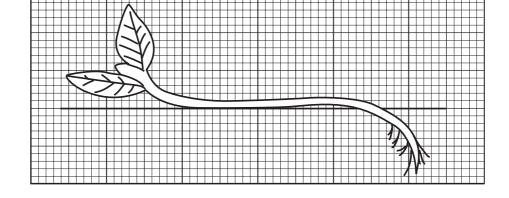

Fig. 2.2

(a) Describe the changes in appearance of the shoot and the root of the seedling after 2 days.

(i)	shoot		
		[2]	
(ii)	root		
		[2]	ĺ

(b)	Describe the processes involved in the changes of directional growth of the shock seedling.
	[6]

[Total : 10]

- 3 Fig 3.1 shows a choice chamber.
- www.PapaCambridge.com This apparatus can be used to study the behaviour of small invertebrates, such woodlice, in different conditions.
  - 60 woodlice were introduced through the central hole.
  - The four sections of the choice chamber had different conditions as shown in Fig. 3.1.

dark and dry

dark and moist

light and dry

light and moist

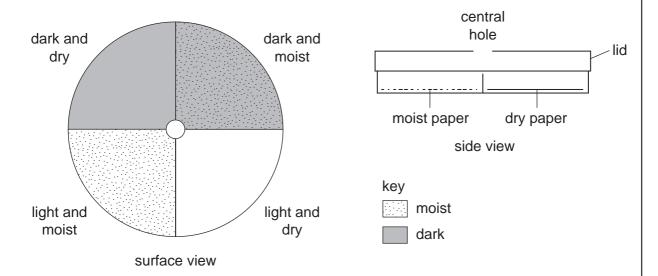

Fig. 3.1

- The choice chamber was left undisturbed for 10 minutes.
- The numbers of woodlice in each section were counted.
- The numbers were recorded in Table 3.1.
- These woodlice were released into their natural environment.
- The investigation was repeated with three more samples of woodlice.

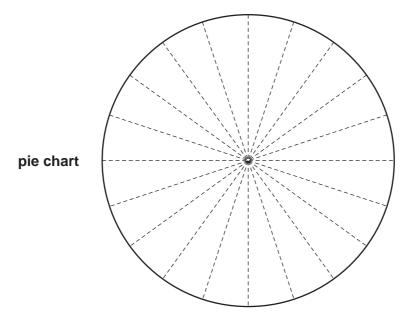

Table 3.1

		11		light and moist	DanaCan
		Table 3.1			10
sample of woodlice	dark and dry	dark and moist	light and dry	light and moist	
1st	8	47	1	4	
2nd	4	56	0	0	
3rd	5	52	1	2	
4th	7	49	2	2	
total		204		8	
average		51		2	

Complete Table 3.1. The calculations for the moist sections have been completed for you.

[2]

(ii) Plot the average number of woodlice in each condition on the pie chart below.

[3]

(b)	(i)	State which conditions the woodlice prefer.
	/::\	Suggest how this hohaviour might halp the woodline to survive in their natural
	(ii)	Suggest how this behaviour might help the woodlice to survive in their natural habitat.
		[2]
(a)	Suz	ggest how you could improve this investigation to make the results more reliable.
(८)	Su	ggest now you could improve this investigation to make the results more reliable.
