TOTAL

www.PapaCambridge.com 4 A student investigated the temperature changes that occur when two compounds A react with hydrochloric acid. The apparatus below was used.

Experiment 1

By using a measuring cylinder, 30 cm³ of hydrochloric acid was added to the plastic cup.

Use the thermometer diagram to record the initial temperature of the acid in the table. The timer was started, and some of the solid A was added to the cup. Immediate effervescence occurred. The mixture was stirred by moving the cup until the fizzing stopped.

More of A was then added and the student continued adding A in this way until all of solid A had been added.

Use the thermometer diagrams to record the temperature of the mixture every half minute.

Experiment 2

Experiment 1 was repeated using solid **B**. Use the thermometer diagrams to record the temperatures in the table.

Experiment 1

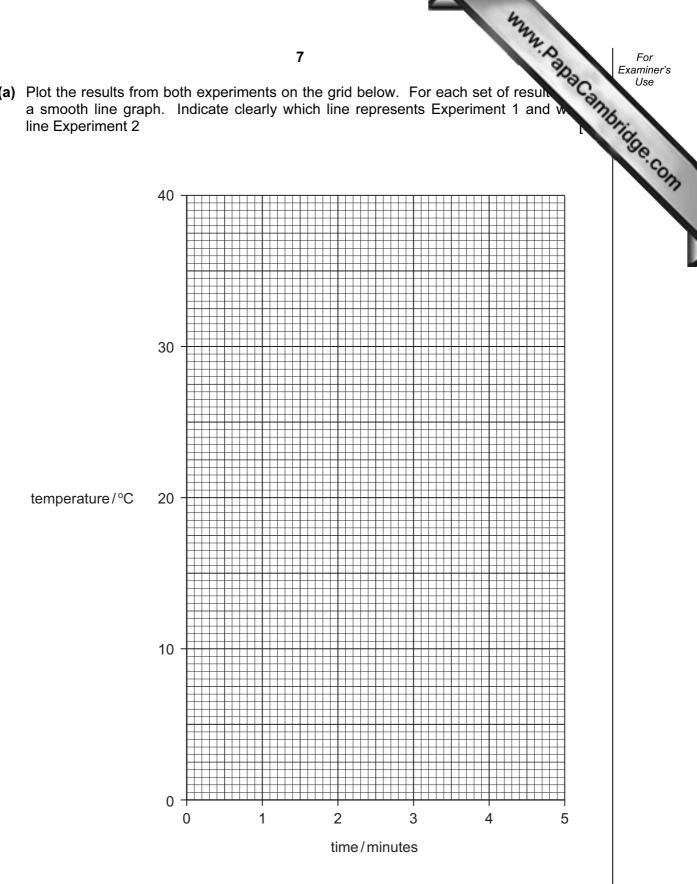

Table of resul Experiment 1	lts		6			2.5	For Examined Use
time/min	0.0	0.5	1.0	1.5	2.0	2.5	1
thermometer diagram	25	25	25	30 - 25 - 20	35	30	
temperature/°C							
	3.0	3.5	4.0	4.5	5.0

	9
A mixture of two calcium compounds C	and D was tested.
C is partially soluble in water and D is so	bluble in water.
Complete the observations in the table.	9 and D was tested. bluble in water.
tests	observations
ne mixture of C and D was added to stilled water in a boiling tube. The be was shaken. The mixture was tered.	
) The filtrate was divided into five equal portions.	
 (i) To the first portion was added drops of aqueous sodium hydroxide, a little at a time, with shaking. 	[2]
Excess aqueous sodium hydroxide was added.	[1]
 (ii) To the second portion was added excess aqueous ammonia, a little at a time. 	[1]
(iii) To the third portion was added dilute sodium hydroxide and aluminium powder. The mixture was boiled and the gas tested with damp litmus paper.	red litmus went blue
(iv) The pH of the fourth portion was tested with Indicator paper.	pH about 10
(v) Carbon dioxide was bubbled through the fifth portion.	solution turned milky/cloudy
 b) Name the gas given off in (a)(iii). 	[1] ervation in (a)(v) .

Is manganese(IV) oxide a catalyst? 8

A catalyst is a substance that speeds up a chemical reaction and remains unchanged.

www.papaCambridge.com Hydrogen peroxide, H₂O₂ breaks down to form oxygen. This reaction is very slow without a catalyst. Describe an experiment to show that manganese(IV) oxide is a catalyst for this reaction.

You are provided with the following items.

Hydrogen peroxide solution
Manganese(IV) oxide
Measuring cylinder
Balance
Beaker
Filtration apparatus
Splints/Bunsen burner
Distilled water
