CHEMISTRY					062	20/03
NUMBER			NUMBER			

CANDIDATE

Candidates answer on the Question Paper.

No Additional Materials required.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen in the spaces provided on the Question Paper. You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

For Examiner's Use

This document consists of 14 printed pages and 2 blank pages.

A majo	or source of energy is the combustion of fossil fuels.	Car
(a) (i)	Name a solid fossil fuel.	13
(ii)	Name a gaseous fossil fuel.	[1]
<b>(b)</b> Pe	etroleum is separated into more useful fractions by fractional distillation.	ניו
(i)	Name <b>two</b> liquid fuels obtained from petroleum.	
	and	[2]
(ii)	Name <b>two</b> other useful products obtained from petroleum that are not used fuels.	as
	and	[2]
(iii)	Give another mixture of liquids that is separated on an industrial scale by fractio distillation.	nal
		[1]

For iner's

[Total: 7]

## 2 Complete the following table.

following table.	3		MANN, PARACO	For
particles present	electrical conductivity of solid	electrical conductivity of liquid	example	No iners
positive and negative ions	poor			
atoms of two different elements in a giant covalent structure	poor	poor		
and	good		copper	
	particles present  positive and negative ions  atoms of two different elements in a giant covalent structure  and	particles present electrical conductivity of solid  positive and negative ions poor  atoms of two different elements in a giant covalent structure poor  and good	particles present electrical conductivity of solid conductivity of liquid  positive and negative ions poor  atoms of two different elements in a giant covalent structure good good good	particles present electrical conductivity of solid positive and negative ions poor atoms of two different elements in a giant covalent structure poor and good copper

- 3 There are three methods of preparing salts.
  - Method **A** use a burette and an indicator.
  - Method  ${\bf B}$  mix two solutions and obtain the salt by precipitation.
  - Method **C** add an excess of base or a metal to a dilute acid and remove the excess by filtration.

For each of the following salt preparations, choose one of the methods **A**, **B** or **C**, name any additional reagent needed and then write or complete the equation.

(i)	the soluble salt, z	inc sulphate, from the insoluble base, zinc oxide	
	method		
	reagent		
	word equation		[3]
(ii)	the soluble salt, p	otassium chloride, from the soluble base, potassium hydroxide	;
	method		
	reagent		
	equation	+ $\rightarrow$ KC $l$ + H <sub>2</sub> O	[3]
(iii)	the insoluble salt	lead(II) iodide, from the soluble salt, lead(II) nitrate	
	method		
	reagent		
	equation Pb <sup>2+</sup> +	$\rightarrow$	[4]
		[Total:	10]

			42	
			5 eriodic table to help you answer these questions.  of each of the following compounds.	
Use	e you	ur copy of the pe	eriodic table to help you answer these questions.	Car
(a)	Pre	dict the formula	of each of the following compounds.	7bn
	<b>(1)</b>			
	(i)	barium oxide		[1]
	(ii)	boron oxide		[1]
(b)	Giv	e the formula of	f the following ions.	
	(i)	sulphide		[1]
	(ii)	gallium		[1]
(c)			nowing the arrangement of the valency electrons in one molecule bund nitrogen trichloride.	e of
	Use	e x to represent	an electron from a nitrogen atom.	
		•	an electron from a chlorine atom.	[3]
(d)	Pot	assium and var	nadium are elements in Period IV.	
	(i)	State <b>two</b> diffe	erences in their physical properties.	
				[2]
	(ii)	Give <b>two</b> diffe	rences in their chemical properties.	
				[2]

(e)		uorine and astatine are halogens. Use your knowledge of the other halogedict the following:									
	(i)	The physical state of fluorine at r.t.p.									
		The physical state of astatine at r.t.p.	[2]								
	(ii)	Two similarities in their chemical properties									
			[2]								

[Total 15]

For viner's

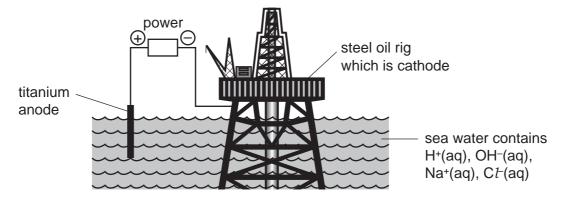

(i)	Explain why it is necessary to use argon rather than air.	
		[1]
(ii)	Name another metal that would reduce titanium chloride to titanium.	

	[4]
	[ I ]

(111)	chloride.

.....

**(b)** Titanium is very resistant to corrosion. One of its uses is as an electrode in the cathodic protection of large steel structures from rusting.

` '						

(i) Define oxidation in terms of electron transfer.

(ii)	The steel oil rig is the cathode. Name the gas formed at this electrode.	

(iii) Name the **two** gases formed at the titanium anode.

		and	 [2]
(iv)	Explain why the oil rig does not rust.		

[/

	May	
	8	
(v)	Another way of protecting steel from corrosion is sacrificial protection.  Give <b>two</b> differences between sacrificial protection and cathodic protection.	For iner's
	[2]	G.COM
	[Total: 12]	

[4]

- Aluminium is extracted by the electrolysis of a molten mixture that contains alumina, 6 is aluminium oxide,  $Al_2O_3$ .
- www.papaCambridge.com (a) The ore of aluminium is bauxite. This contains alumina, which is amphoteric, and iron(III) oxide, which is basic. The ore is heated with aqueous sodium hydroxide. Complete the following sentences.

The	dissolves to give a solution of	
The	does not dissolve and can be removed by	[4]

(b) Complete the labelling of the diagram.

(c) The ions that are involved in the electrolysis are  $Al^{3+}$  and  $O^{2-}$ .

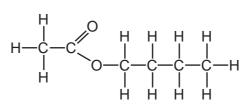

(i)	Write an equation for the reaction at the cathode.	
-----	--	--

(ii) Explain how carbon dioxide is formed at the anode.

[2]

		20	2
(d)	Giv	e an explanation for each of the following.	6
	(i)	Aluminium is used extensively in the manufacture of aircraft.	1
			[1]
	(ii)	Aluminium is used to make food containers.	
			[2]
	(iii)	Aluminium electricity cables have a steel core.	
			[1]
		[Total:	161

- www.PapaCambridge.com Esters, fats and polyesters all contain the ester linkage.
- (a) The structural formula of an ester is given below.

Name two chemicals that could be used to make this ester and draw their structural formulae. Show all bonds.

	nar	nes			and		[2]
	stru	ctural	l formulae				
(b)	(i)	Draw	v the structura	al formula of a po	llyester such	as Terylene.	[2]
							[2]
	(ii)	Sugg	gest a use for	this polymer.			[1]

(c) Cooking products, fats and vegetable oils, are mixtures of saturated and unsat esters.

www.PapaCambridge.com The degree of unsaturation can be estimated by the following experiment. 4 drops of the oil are dissolved in 5 cm<sup>3</sup> of ethanol. Dilute bromine water is added a drop at a time until the brown colour no longer disappears. Enough bromine has been added to the sample to react with all the double bonds.

cooking product	mass of saturated fat in 100 g of product/g	mass of unsaturated fat in 100 g of product/g	number of drops of bromine water
margarine	35	35	5
butter	45	28	4
corn oil	10	84	12
soya oil	15	70	10
lard	38	56	

(i) Complete the one blank space in the table. [1]

(ii) Complete the equation for bromine reacting with a double bond.

$$C=C$$
 +  $Br_2$   $\longrightarrow$  [2]

(iii) Using saturated fats in the diet is thought to be a major cause of heart disease. Which of the products is the least likely to cause heart disease? 

[1]

www.PapaCambridge.com (d) A better way of measuring the degree of unsaturation is to find the iodine number unsaturated compound. This is the mass of iodine that reacts with all the double be in 100 g of the fat. Use the following information to calculate the number of double bonds in one molecule of the fat. Mass of one mole of the fat is 884 g. One mole of  $I_2$  reacts with one mole C=CThe iodine number of the fat is 86.2g. Complete the following calculation. 100 g of fat reacts with 86.2 g of iodine. 884 g of fat reacts with \_\_\_\_\_ g of iodine. One mole of fat reacts with \_\_\_\_\_ moles of iodine molecules. Number of double bonds in one molecule of fat is \_\_\_\_\_\_ [3]
