CHEMISTRY 0620/63

Paper 6 Alternative to Practical

October/November 2011

1 hour

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 10 printed pages and 2 blank pages.

BLANK PAGE

www.PapaCambridge.com

- (a) Complete the empty boxes to name the pieces of apparatus. [3]
- (b) What name is given to the separation method in A?

.....[1]

(c) Which apparatus would be most suitable to obtain crystals from an aqueous solution of copper sulfate?

______[1]

[Total: 5]

www.PapaCambridge.com 2 A student investigated the temperature changes when metals are added to excess hydrochloric acid using the apparatus shown.

The five metals used were copper, magnesium, calcium, iron and zinc.

0.5 g of each metal was added to 25 cm3 of hydrochloric acid and the highest temperature reached was measured.

In each experiment the initial temperature of the acid was 25 °C.

(a) Use the thermometer diagrams to record the highest temperatures in the table. Complete the table by calculating the temperature rises.

| | I | | |
|-----------|-----------------------------------|------------------------|---------------------|
| metals | thermometer diagrams | highest temperature/°C | temperature rise/°C |
| copper | 30 - 25 - 20 | | |
| magnesium | | | |
| calcium | - 50 - 45 - 40 | | |
| iron | 35 30 25 | | |
| zinc | 35 | | |

| (c) | (i) | Which metal reacted with the hydrochloric acid to produce the largest temperature rise? |
| | | [1] |
| | (ii) | State and explain the result obtained for copper. |
| | | |
| | | [2] |
| (d) | Use | e the results to place the metals in order of increasing reactivity. |
| least r | eact | ive metal → most reactive metal |
| | | |
| | | [2] |
| (e) | | dict the effect on the temperature changes if the experiments were repeated using cm³ of the dilute hydrochloric acid. Explain your answer. |
| | | |
| | | [2] |

3 The solubility of carbon dioxide gas in water varies with temperature. A student used a data book to plot the solubility of carbon dioxide in water at diffe temperatures on the grid below.

| (a) | Draw a smooth curve through the points. | [1] |
|-----|---|-----|
| (b) | Which point appears to have been incorrectly plotted? | |
| | | [1] |
| (c) | What is the effect of increasing the temperature on the solubility of carbon dioxide water? | in |
| | | [1] |
| (d) | Nitrogen is less soluble in water than carbon dioxide. On the grid, sketch a graph | to. |

represent the solubility of nitrogen.

Question 4 starts on the next page.

www.papaCambridge.com A student investigated the reaction between dilute sulfuric acid and three aqueous s of sodium hydroxide of different concentrations, labelled A, B and C.

Three experiments were carried out.

Experiment 1

A burette was filled up to the $0.0\,\text{cm}^3$ mark with dilute sulfuric acid.

Using a measuring cylinder, 20 cm³ of solution A was poured into a conical flask with a few drops of phenolphthalein indicator.

The sulfuric acid was added to the flask, until the colour of the phenolphthalein changed.

(a) Use the burette diagram to record the final volume in the table.

final reading

Experiment 2

Experiment 1 was repeated using solution **B**.

(b) Use the burette diagrams to record the volumes in the table.

Experiment 3

Experiment 2 was repeated using solution C instead of solution B.

(c) Use the burette diagrams to record the volumes in the table and complete the table.

| burette readings/cm³ experiment 1 experiment 2 experiment 3 final reading initial reading | | 9 | | |
|--|-----------------|--------------|------------------|--------------|
| | | bu | rette readings/c | m³ |
| | | experiment 1 | experiment 2 | experiment 3 |
| | final reading | | | |
| | initial reading | | | |
| difference | difference | | | |

| | [4] |
|-----|---|
| (d) | What permanent colour change was observed after the sulfuric acid was added to the flask? |
| | from to |
| (e) | What type of chemical reaction occurs when sulfuric acid reacts with sodium hydroxide? |
| | [1] |
| (f) | (i) Complete the sentences below. |
| | Aqueous sodium hydroxide labelled needed the smallest volume of sulfuric acid to change the colour of the phenolphthalein. |
| | Aqueous sodium hydroxide labelled needed the largest volume of sulfuric acid to change the colour of the phenolphthalein. [1] |
| | (ii) The order of concentration of the solutions of sodium hydroxide is |
| | least concentrated — most concentrated |
| | |
| | [2] |
| (g) | Compare the volumes of sulfuric acid used in Experiments 1 and 2. |
| | [1] |
| (h) | If Experiment 3 was repeated using $40\mathrm{cm^3}$ of solution \mathbf{C} , what volume of sulfuric acid would be used? |
| | [2] |
| (i) | What would be a more accurate method of measuring the volume of the aqueous sodium hydroxide? |
| | [1] |

| (j) | What would be the effect on the results if the solutions of sodium hydroxide were before adding the sulfuric acid? Give a reason for your answer. |
|-----|---|
| | effect on results |
| | reason[2] |
| (k) | Suggest a different method of finding the order of concentrations of the solutions of sodium hydroxide. |
| | |
| | |
| | |
