## Factfile about vegetation in the three fieldwork locations

	Location	Vegetation characteristics
Increasing density of vegetation cover 	Bare ground	<ul style="list-style-type: none"> <li>• No vegetation is growing</li> </ul>
	Deciduous woodland	<ul style="list-style-type: none"> <li>• Leaves are large and flat</li> <li>• Leaves fall off and trees are bare by the beginning of winter. New leaves grow in spring.</li> <li>• Trees are more widely spaced than in coniferous woodland.</li> <li>• Common trees are oak, beech and ash.</li> </ul>
	Coniferous woodland	<ul style="list-style-type: none"> <li>• Leaves are thin and sharp like needles</li> <li>• Leaves fall off throughout the year and are continuously replaced</li> <li>• Trees grow nearer to each other than in deciduous woodland</li> <li>• Common trees are pine, fir and spruce</li> </ul>

Turn over to pages 4 and 5 for Photographs A, B, C and D of the three fieldwork locations
