CANDIDATE NAME					
CENTRE NUMBER			CANDIDATE NUMBER		

MARINE SCIENCE 0697/01

Paper 1 Structured May/June 2022

1 hour 30 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [].

This document has 16 pages. Any blank pages are indicated.

Answer all questions.

1 Fig. 1.1 shows a food web for a seagrass bed.

(a) (i) Seagrass is a primary producer.

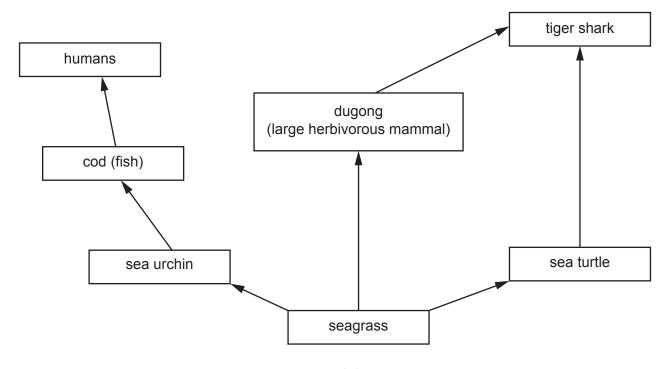

Fig. 1.1

		Explain what is meant by a primary producer.	
			[1]
	(ii)	State what the arrows in the food web represent.	
			[1]
(b)		lain the long-term effect on the dugong population of fishing for cod above the maximutainable yield.	ım
			[3]

(c)	Seagrass needs inorganic nutrients to grow well.	
	State the role of the following in seagrass.	
	nitrates	
	phosphates	 [2]
(d)	Outline the reasons why energy is lost between each trophic level in any food chain.	
		[3]
	[Total:	10]

2 (a) Fig. 2.1 shows three different fishing methods, ${\bf A}$, ${\bf B}$ and ${\bf C}$.

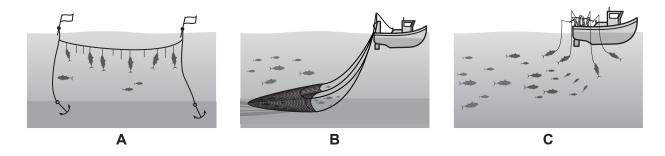

Fig. 2.1

		Fig. 2. i	
	(i)	State the name of each fishing method.	
		A	
		В	
		C	3]
	(ii)	State one ecological problem with the method shown in B .	[ر
		[1]
(b)	Fish	Aggregating Devices (FADs) increase the fish catch in areas near the FAD.	
	(i)	There are environmental concerns about the use of FADs.	
		One recommendation to reduce the environmental impact is to use hanging ropes mad from natural materials instead of hanging mesh made from nylon.	е
		Suggest two reasons for this.	
		1	
		2	
		[2	 21

	(ii)	Purse seine boat	ts fish intens	sively around FAD	Os.		
		Describe two en	vironmental	impacts of this fis	shing.		
		1					
		2					
							[2]
(c)		2.2 shows three ruse.	boat-buildi	ng materials and	some adv	antages and disadva	intages of
		w one line from e left and one disac				ne advantage in the o	column on
		advantage		material		disadvantage	
		easily moulded		wood		breaks easily in a collision	
		renewable		aluminium		corrodes in seawater	
		dent resistant		fibreglass		swells and shrinks in water	
				Fig. 2.2			[3]

[Total: 11]

3 Fig. 3.1 shows the surface of the Earth and the boundaries of sections of the Earth's crust.

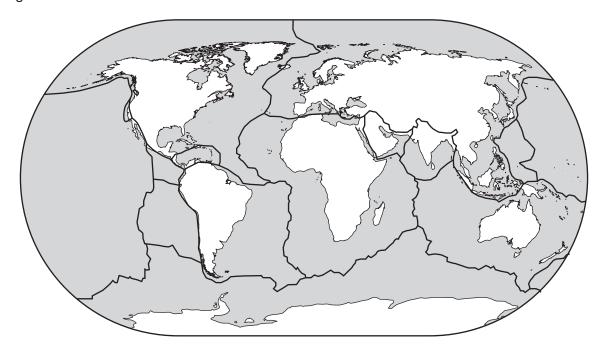

Fig. 3.1

State the name given to these sections of the Earth's crust shown in Fig. 3.1.	
[1]
Describe how the movement of these sections can lead to the formation of a tsunami.	
г	41

© UCLES 2022 0697/01/M/J/22

(a)

(b) Fig. 3.2 shows an early-warning system for tsunamis.

To detect tsunamis, early-warning tsunameters are placed on the sea bed. The tsunameters communicate with a surface buoy.

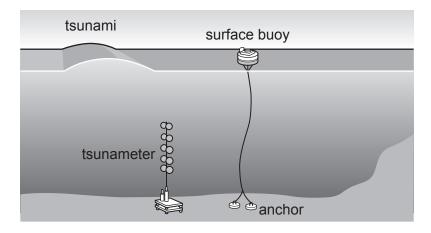

Fig. 3.2

Suggest how the tsunameter is able to detect a tsunami wave passing over it.	
	[2]
Γ	Total: 7]

4	(a)		ters are edible bivalve molluscs that can be fished from the sea bed by capture fishery or vn by aquaculture.					
		(i)	State the name of an	other group of marine mo	lluscs.	[1]		
		(ii)	Table 4.1 shows the and 2017.		shery and aquaculture of oys			
				Table 4.1				
			production	ers / thousand tonnes				
			method	1980	2017			
			capture fishery	200	147			
			aquaculture	640	639			
			TOTAL	840				
	((iii)	1980 and 2017.	s why production of oyster	rs has remained almost const	ant between		
	(b)	(i)	Oyster aquaculture is	considered to be extensi	ve.	[2]		
			Explain the difference	e between extensive and i	ntensive aquaculture.			
						[2]		
		(ii)	State the name of on	e species that is common	lv farmed intensively.			
		(/			,			

	(iii)	Stat	te one environmental impact of an intensive aquaculture operation.	
				[1]
(c)	Fish	spe	cies that are used for aquaculture can be genetically engineered for faster growth	٦.
	The	follo	owing stages, A , B , C , D and E , are involved in genetic engineering of fish.	
		Α	growth-promoting gene identified from a fast-growing fish species	
		В	egg hatches and fish reaches market size faster	
		С	growth-promoting gene extracted from a fast-growing fish species	
		D	growth-promoting gene inserted into a plasmid	
		E	altered plasmid inserted into fish egg	
	Plac	e th	e letters in the correct order for genetic engineering of fish.	
	Firs	t sta	ge — Fifth stage	
				[3]

[Total: 11]

5 Fig. 5.1 shows a cross-section of a coral polyp.

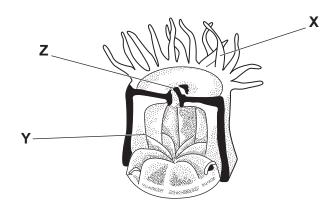

Fig. 5.1

(a) Complete Table 5.1 with the names and functions of the structures $\bf X$, $\bf Y$ and $\bf Z$ labelled in Fig. 5.1.

Table 5.1

structure	name	function
Х		
^		
V		
Y		
Z		

г	\sim
ı	nı
ı	VΙ

(b) Coral polyps have two methods of obtaining nutrition.

(i)	Describe the use of stinging cells in obtaining nutrition.
	[2]

	(ii)	Coral polyps may contain zooxanthellae.
		Explain how zooxanthellae provide nutrition to the polyp.
		[4]
(c)	Cor	al reefs may be mined to be used as building material.
	Ехр	lain the environmental impact of coral mining on fisheries.
		[3]
		[Total: 15]

Jap	an n	as a large market for diamondback squid.
(a)	Exp	plain the meaning of the term market.
		[1]
(b)	The	e catch of diamondback squid in Japan has decreased.
	(i)	Suggest one reason for this decrease in catch.
	(ii)	Explain the effect of this decrease in catch on the price of diamondback squid in Japan.
		[2]
(c)	(i)	Other countries in the region want to exploit their natural economic resources within their Exclusive Economic Zone (EEZ).
		Describe what is meant by a natural economic resource.
		[2]
	(ii)	As a country develops a new diamondback squid fishery within their EEZ, both public and private ownership may work together.
		Describe the role of public ownership.
		[2]

(a)	diamondback squid fishery remains sustainable.
	1

7 Human pollution can cause problems in the marine environment.

There are 5 main types of pollutant. These are shown in Table 7.1.

Table 7.1

pollutant	human source
carbon dioxide	
plastics	
excess nutrients	
noise	
toxins	oil spill

	toxins	oil spill				
(a)	Complete Table 7.1 by sugg	gesting one human source for each type of pollutant. or you.	[4]			
(b)	Explain the impact of litter of	on marine organisms.				
			,			
			[3]			
(c)	Oil is harmful to many marine organisms.					
	State two pollution control	measures that can be used to reduce the effect of oil spills a	ıt sea.			
	1					
	2					
			[2]			

[Total: 9]

St	ate the kingdom and group of each of the three organisms described below.	
(a) Organism 1	
	 produces rhizomes cells contain chlorophyll cells have a nucleus cells have a cell wall cells have a vacuole 	
	Kingdom	
	Group	[2]
(b) Organism 2	
	 has a carapace has multiple legs has antennae cells have a nucleus cells have a cell membrane 	
	Kingdom	
	Group	[2]
(c) Organism 3	
	 has a holdfast has red blades cells have a nucleus cells contain a red pigment for photosynthesis 	
	Kingdom	
	Group	[2]
