Mark Scheme Notes

- Marks are of the following three types:
 - M** Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
 - A** Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
 - B** Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol \surd implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0.
B2, 1, 0 means that the candidate can earn anything from 0 to 2.
- The following abbreviations may be used in a mark scheme or used on the scripts:
 - AG** Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
 - BOD** Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
 - CAO** Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
 - ISW** Ignore Subsequent Working
 - MR** Misread
 - PA** Premature Approximation (resulting in basically correct work that is insufficiently accurate)
 - SOS** See Other Solution (the candidate makes a better attempt at the same question)

| | | |
|--------|--------------------------------|----|
| Page 2 | Mark Scheme | 5 |
| | IGCSE EXAMINATIONS – JUNE 2003 | 06 |

Penalties

- MR –1 A penalty of MR –1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through $\sqrt{\quad}$ " marks. MR is not applied when the candidate misreads his own figures – this is regarded as an error in accuracy.
- OW –1, 2 This is deducted from A or B marks when essential working is omitted.
- PA –1 This is deducted from A or B marks in the case of premature approximation.
- S –1 Occasionally used for persistent slackness.
- EX –1 Applied to A or B marks when extra solutions are offered to a particular equation.

|---|-----------------------------|--|
| $\int (2\sin x + 4\cos x)dx = -2\cos x + 4\sin x$ Area under curve = $[]_{0.464} - []_0$ $\rightarrow -(-2) = 2.$ Req'd area = $2 - (4 \times 0.464) = 0.144$ (5 or 6). | M1A1 DM1 M1A1 [11] | Any attempt with trig. functions. x-limits used correctly. If "0" ignored or automatically set to 0, give DM0. Plan mark – must be radians for both M and A. |
|---|-----------------------------|--|

12. OR

$$dy/dx = \frac{1}{2}(1+4x)^{-1/2} \times 4$$

At P, $m = \frac{2}{3}$

Eqn of tangent $y - 3 = \frac{2}{3}(x - 2)$
 At B, $x = \frac{1}{3}$

$$\int \sqrt{1+4x} dx = (1+4x)^{1.5} \times \frac{2}{3} \div 4$$

Area under curve = $[]^2 - []^0 = 4\frac{1}{3}$

Shaded area =
 Area of trapezium - $4\frac{1}{3} = \frac{1}{3}$

Or Area under
 $y = \frac{2}{3}x + \frac{1}{3} - 4\frac{1}{3} = \frac{1}{3}$

[or $\int xdy = \int (\frac{1}{4}y^2 - \frac{1}{4})dy$
 $= \frac{y^3}{12} - \frac{y}{4}$

area to left of curve = $[]_3 - []_1 = 1\frac{2}{3}$
 shaded area =
 $1\frac{2}{3} - \text{triangle } (\frac{1}{2} \cdot 2 \cdot 1\frac{1}{3})$
 $= \frac{1}{3}$

| | |
|------------------|---|
| M1A1 | Any attempt with dy/dx – not for $\sqrt{1+4x} = 1 + 2\sqrt{x}$. A mark needs everything. |
| M1A1 | Not for normal. Not for "y + y ₁ " or for m on wrong side. Allow A for unsimplified. |
| M1A1 A1 | Any attempt at integration with (1 + 4x) to a power. Other fn of x included, M1 only. |
| DM1A1 | Use of limits 0 to 2 only. Must attempt a value at 0. |
| M1 | Plan mark independent of M marks. |
| A1 | A1 co. |
| [M1A1 A1 | Attempt at differentiation. A1 for each term. |
| DM1A1 | Must be limits 1 to 3 used correctly. |
| M1 A1 [11] | Plan mark independent of other Ms. |

DM1 for quadratic equation. Equation must be set to 0.

Formula – must be correctly used. Allow arithmetical errors such as errors over squaring a negative number.

Factors – must be an attempt at two brackets. Each bracket must then be equated to 0 and solved.

Completing the square – must result in $(x \pm k)^2 = p$. Allow if only one root considered.

Grade thresholds taken for Syllabus 0606 (Additional Mathematics) in the June 2003 examination.

| | maximum mark available | minimum mark required for grade: | | |
|-------------|------------------------|----------------------------------|----|----|
| | | A | C | E |
| Component 1 | 80 | 54 | 29 | 20 |
| Component 2 | 80 | 60 | 34 | 23 |

Grade A* does not exist at the level of an individual component.
