Paper 6 Investigation and Modelling (Extended)

May/June 2023

1 hour 40 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer both part A (Questions 1 to 4) and part B (Questions 5 to 6).
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You should use a graphic display calculator where appropriate.
- You may use tracing paper.
- You must show all necessary working clearly, including sketches, to gain full marks for correct methods.
- In this paper you will be awarded marks for providing full reasons, examples and steps in your working to communicate your mathematics clearly and precisely.

INFORMATION

- The total mark for this paper is 60.
- The number of marks for each question or part question is shown in brackets [].

This document has 16 pages. Any blank pages are indicated.

The Investigation starts on the next page.

Answer both parts A and B.

A INVESTIGATION (QUESTIONS 1 to 4)

SQUARES IN RECTANGLES (30 marks)

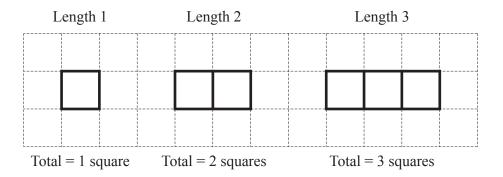

You are advised to spend no more than 50 minutes on this part.

This investigation looks at finding the total number of squares inside a rectangle drawn on a grid.

In this investigation:

- the sides of the rectangles are on the grid lines
- the length of a rectangle is never less than its width.

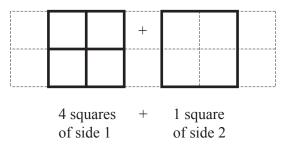

1 Rectangles of width 1

Complete the statements.

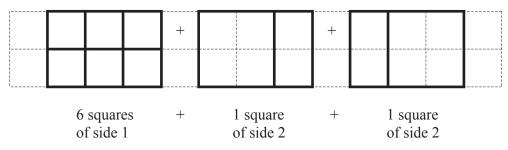

2 Rectangles of width 2

Length 2

Total = 5 squares

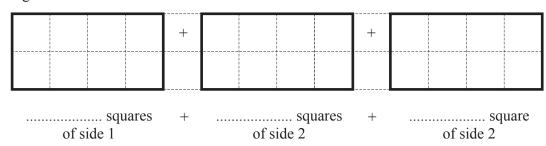

Length 3

Total = 8 squares

(a) Draw lines on these rectangles and write the number of squares under each one to show there is a total of 11 squares.

Length 4

Total = 11 squares [3]

(b) (i) Complete the table.

You may use th	ne grid be	low the tab	le to he	lp you.
----------------	------------	-------------	----------	---------

Rectangles of width 2							
Length of rectangle	Total number of squares						
2	5						
3	8						
4	11						
5							

 	 		 					 	i
 		ļ 							

[2]

(ii) Find an expression, in terms of L, for the total number of squares in a rectangle of width 2 and length L.

 [2]

(iii) Calculate the total number of squares in a rectangle of width 2 and length 170.

.....[2]

3 Rectangles of width 3

Length 3

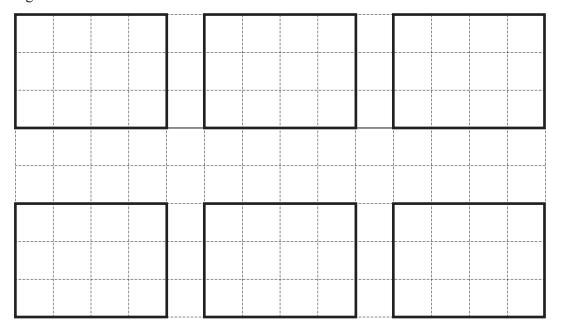

Total = 14 squares

(a) Draw lines on these rectangles and write the number of squares under each one to find the total number of squares in a rectangle of width 3 and length 4.

You may not need to use all the rectangles.

Length 4

.....[4]

(b) (i) Complete the table.
You may use the grid to help you.

Rectangles of width 3							
Length of rectangle	Total number of squares						
3	14						
4							
5	26						
6	32						
7							

[2]

(ii) Find an expression, in terms of L, for the number of squares in a rectangle of width 3 and length L.

[2]	ı

4 (a) Complete the table.

Use your answers to Question 1, Question 2(b)(ii) and Question 3(b)(ii) to help you.

Width of rectangle, w	Expression for total number of squares in terms of L
1	
2	
3	
4	10 <i>L</i> – 10
5	
6	21 <i>L</i> – 35

[3]

- **(b)** The expressions in the table have two terms.
 - (i) The first term is kL, where k is an integer.

Find an expression for k in terms of w.

.....[3]

(ii)	The second term in the expression is a constant. The constant is in the form $aw^3 + bw$, where a and b are both fractions.
	Find the value of a and the value of b. Write down the expression for the constant in terms of w.
	$a = \dots$
	$b = \dots$
	[4]
	[7]
(iii)	Use your expressions in part (i) and part (ii) to find the total number of squares in a rectangle of width 10 and length 11.
	[2]

B MODELLING (QUESTIONS 5 to 6)

CARDBOARD BOXES (30 marks)

You are advised to spend no more than 50 minutes on this part.

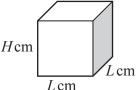

This task looks at the dimensions of storage boxes.

A company stores metal bolts in closed boxes which are square-based cuboids.

The boxes are made of 5 mm thick cardboard.

The external side of the base is L cm and the external height is H cm.

The **volume** of a box is all the space that the box takes up. The **capacity** of a box is all the space inside it.

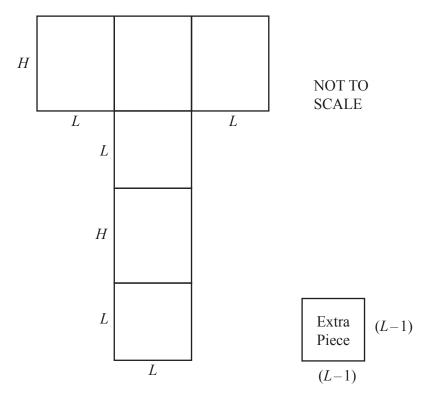

......[1]

		· · · · · · · · · · · · · · · · · · ·	L cm
5	(a)	Show that the internal dimensions of the box are $(L-1)$ cm and $(H-1)$ cm.	
	(b)	Write down a formula for C , the capacity of the box, in terms of L and H .	[2]
	()		
			[2]
	(c)	The bolts are so heavy that an extra piece of cardboard of thickness 5 mm is p of the box to increase its strength.	laced in the bottom
		Change your model for C in part (b) to include this extra piece of cardboard.	

(d)		external area of the base of the box is 900 cm ² . The height of the box is 5 cm longer than the length of the base.	
	(i)	Use your model in part (c) to calculate the capacity of the box. Write down all the figures on your calculator.	
			[4]
	(ii)	Calculate the difference between the capacity and the volume of the box.	
			[3]

6 The net of a 3D shape is what it looks like when it is opened out flat. This is a net for a box with the extra piece of cardboard.

(a) Show that the formula for A, the area of cardboard including the extra piece, is

$$A = 3L^2 + 4LH - 2L + 1.$$

You may use the diagram to help you.

[3]

- **(b)** The box with external dimensions $L \, \text{cm}$, $L \, \text{cm}$ and $H \, \text{cm}$ has a volume of 12500 cm³.
 - (i) Write an expression for H in terms of L.

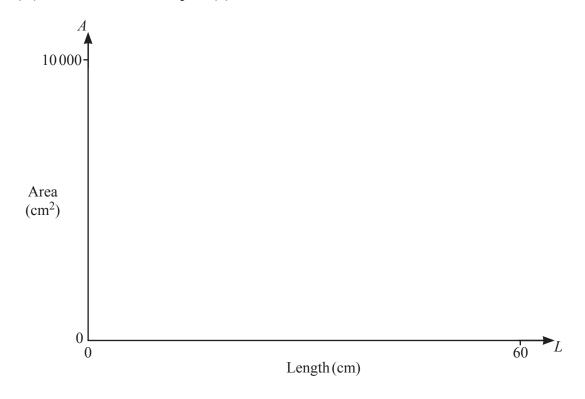

.....[1]

(ii) Show that the model for A in part (a) in terms of L is

$$A = 3L^2 + \frac{50000}{L} - 2L + 1.$$

[1]

(iii) Sketch the model in part (ii) on the axes, for $0 < L \le 60$.

[2]

(IV)	Box A has the minimum area of cardboard.	
	Write down the length of the base of the box and the area of the cardboard.	
	Length =	
	Area =	[2]
(v)	Box B is a cube with volume 12 500 cm ³ .	
	Find the area of the cardboard when the box is a cube.	
		[3]

(vi)	Find which box, A or B, has the greater height. Calculate the difference in height.	
		[3]
(vii)	Find which box, A or B, has the greater capacity. Calculate the difference in capacity.	
		503
