UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

www.papaCambridge.com MARK SCHEME for the October/November 2011 question paper

for the guidance of teachers

0652 PHYSICAL SCIENCE

0652/22

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Page 2	Mark Scheme: Teachers' version	Syllabus r
	IGCSE – October/November 2011	0652 22
(a) balance	;	Sambrid
(b) burette	;	36
(c) thermo	neter ;	[1]
(d) beaker	OR burette ;	[1]
		[Total: 4]
(a) 50 (m/s	5);	[1]
(b) deceler constar	ation ; it ;	[2]
(c) use of a 150 (m (calcula	area under graph, S = ½ × 30 × 10 ; ; ition 30 × 10 = 300 m – max 1)	[2]
(d) (i) zer	о;	[1]
(ii) me	ntion of frictional force ;	[1]
(e) car A ;	radiant :	
greater	acceleration ;	[max 2]
		[Total: 9]

a) suitable example of ionic compound e.g. sodium chloride ;	- Con 1
a) suitable example of ionic compound e.g. sodium chloride ;	°C
suitable example of covalent compound e.g. ammonia ;	SINDI
(b) suitable example for ionic compound ; e.g. conduct electricity when molten or in aqueous solution/giant ionic structure / high melting and boiling points/etc.	
suitable example for covalent compound ; e.g. does not conduct electricity when molten/simple molecular structure /low melting and boiling points/etc.	[2
 (c) diagram showing 2 electrons in outer shell ; 3 shells with 2 electrons in first shell and 8 in middle shell ; 	[2
	[Total: 6
a) bauxite ;	[1
(b) aluminium too reactive ; more reactive than carbon/carbon not reactive enough/will not replace carbon ;	[2
	[Total: 3
(a) (i) so that the mean temperature of the ice is measured ;	[1
 (ii) sample is below room temperature ; so absorbs energy from the surroundings ; 	[2
(b) −2(°C);	[1
c) temperature remains constant/ice melting ; molecules gain potential energy/bonds are broken :	SI
melocaloo gain potoniar onorgy, sonao aro sionon ,	Ľ
