

define :- Upthrust is defined as the upward force which is experienced by any object if it is immersed in a fluid.

Why Upthrust acts :-

Pressure Increases with the depth

P_B = Pressure exerted on the bottom face
 P_T = Pressure exerted on the top face

Since $P_B > P_T$

∴ This difference in Pressure b/w the top & the bottom surface exerts an upward force on the object which is known as "Upthrust"

State why Upthrust :-
b/c of difference in Pressure b/w the Top and the Bottom Surfaces.

formulas for calculating Upthrust

derivation "NOT" Required

$$U = (P_B - P_T) A \rightarrow ①$$

A = Area of Top / Bottom face
(provided that the areas are identical).

Q How do we determine whether an object will float or sink

if $W > U$ Sink
if $U > W$ float

ρ_f = density of fluid

g = acc. of free fall

V_o = Volume of the object

• How to represent Upthrust in a diagram

Ex. ① An object is falling in AIR at constant Speed.

$$\text{Equation } W = AR \text{ (wrong)}$$

Since we have now done Upthrust.
∴ we must mark not 2 but rather 3 forces on the diagram

$$\text{Equation } \underline{\underline{W = U + AR}}$$

Briefly comment on the magnitude of each force?

W = Largest

How to decide b/w AR & U

$$U = \rho_f \cdot g \cdot V_o \therefore U \propto \rho_f$$

In this case object was falling in Air ∴ ρ_f (air) = v. Low

∴ U = Smallest.

Increasing Order = U, AR, W .

Ex. A gas molecule is stationary inside a Liquid column.

(i) Mark the forces on the diagram

Q What about Air Resistance?

fluid alternate terms :-
(1) fluid Resistance
(2) drag force
(3) Viscous drag.

Since stationary ∴ Viscous drag is not marked / mentioned.

(ii) Mark forces if the gas molecule is moving upwards at constant speed?

→ V.D (down)

Since moving upwards ∴ Viscous drag downwards

(iii) Form an Equation $W + V.D = U$

(iv) Comment on magnitude

Increasing order $U = \text{Largest}$.

Compare b/w V.D and W gas molecule ∴ W (negligible)

$$W = \text{smallest}$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_1 = T_2$$

$T_2 + U = W$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$$T_3 + U = W$$

$$T_3 \uparrow \quad U$$

$$W \downarrow$$

$T_3 > T_1$ or $T_3 > T_2$.

$$T_4 + U = W$$

$$T_4 \uparrow \quad U$$

$$W \downarrow$$

$T_4 > T_1, T_2, T_3$.

Ascending order.

$$T_1 = T_2, T_3, T_4$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$$T_3 + U = W$$

$$T_3 \uparrow \quad U$$

$$W \downarrow$$

$$T_4 + U = W$$

$$T_4 \uparrow \quad U$$

$$W \downarrow$$

$T_4 > T_1, T_2, T_3$.

Ascending order.

$$T_1 = T_2, T_3, T_4$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$$T_3 + U = W$$

$$T_3 \uparrow \quad U$$

$$W \downarrow$$

$$T_4 + U = W$$

$$T_4 \uparrow \quad U$$

$$W \downarrow$$

$T_4 > T_1, T_2, T_3$.

Ascending order.

$$T_1 = T_2, T_3, T_4$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$$T_3 + U = W$$

$$T_3 \uparrow \quad U$$

$$W \downarrow$$

$T_3 > T_1, T_2$.

Ascending order.

$$T_1 = T_2, T_3$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$T_2 > T_1$.

Ascending order.

$$T_1 = T_2$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$T_2 > T_1$.

Ascending order.

$$T_1 = T_2$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$T_2 > T_1$.

Ascending order.

$$T_1 = T_2$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$T_2 > T_1$.

Ascending order.

$$T_1 = T_2$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$

$$T_2 + U = W$$

$$T_2 \uparrow \quad U$$

$$W \downarrow$$

$T_2 > T_1$.

Ascending order.

$$T_1 = T_2$$

$T_1 + U = W$

$$T_1 \uparrow \quad U$$

$$W \downarrow$$
