

Candidates answer on the Question Paper.

No Additional Materials are required.

## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions. A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [ ] at the end of each question or part question.

For Examiner's Use

This document consists of 20 printed pages.

1 The Periodic Table shows all of the chemical elements arranged into groups and per

Fig. 1.1 shows part of the Periodic Table. The letters in this table are not the normal chemical symbols of the elements.

- (a) Complete the statements below using letters, chosen from A to H, which refer to elements in Fig. 1.1. Letters may be used once, more than once or not at all.
  - The element shown as letter \_\_\_\_\_\_is an alkali metal in period 3. •
  - The element shown as letter \_\_\_\_\_\_ is the noble gas with the lowest density.
  - The three elements shown as letters \_\_\_\_\_, \_\_\_\_ and \_\_\_\_\_ have very similar chemical properties to each other.
  - The element shown as letter \_\_\_\_\_\_is sometimes used as a catalyst. [4]
- (b) The elements sodium and sulphur are both oxidised when they burn in air to produce sodium oxide and sulphur dioxide respectively.
  - (i) Explain the meaning of the term *oxidised*.

..... ......[1]

	422

www.papaCambridge.com 4 Fig. 2.1 shows the structure of the human thorax (seen from the front). Α F В С Ε D Fig. 2.1 (a) Give the letter of each of the following structures. (i) the left bronchus ..... (ii) a pleural membrane ..... (iii) a place where there are goblet cells and cilia [3] ----(b) Gas exchange takes place in the alveoli. When a person smokes for a number of years, the walls of the alveoli start to break down. This is called emphysema. (i) Name the process by which molecules of oxygen pass into the blood from the alveoli. [1] ..... (ii) Explain why emphysema makes it more difficult for oxygen to get into the blood. ..... [2] .....

www.papaCambridge.com (c) Oxygen is transported around the body in red blood cells. Fig. 2.2 is a diagram group of red blood cells.

(i) State one difference, apart from their colour, between the appearance of red blood cells and white blood cells. [1] (ii) What makes red blood cells look red? [1] ..... (d) Explain why body cells need a constant supply of oxygen. ..... [2] .....

		7 e golfer hits the ball along the ground. It travels 6 m in 3 s. culate the average speed of the ball. te the formula that you use and show your working.	
		e e	DaCa.
(c)	The	golfer hits the ball along the ground. It travels 6 m in 3 s.	1M
	Cal	culate the average speed of the ball.	
	Sta	te the formula that you use and show your working.	
		formula	
		working	
		m/s	[2]
			[2]
(d)	The	golfer's bag of clubs has a mass of 6 kg.	
	(i)	Calculate the weight of the bag of clubs.	
		Assume that the gravitational field strength on Earth is 10 N/kg.	
		N	[1]
	(ii)	Calculate the work done by the golfer when the bag is lifted 0.5 m.	
		State the formula that you use and show your working.	
		formula	
		working	
		J	[2]

(b) The light from a kerosene lamp is provided by the flame produced when kerosene burns in air.

The lamp must be carefully designed and operated to ensure that most of the kerosene undergoes complete combustion.

(i) Complete the word chemical equation for the complete combustion of kerosene.

- 9 (ii) Describe one observation which shows that the reaction occurring in the kero lamp is exothermic. [1]
- (c) The full chemical symbol for carbon is shown below.

## $^{12}_{6}$ C

Draw a diagram of a carbon atom. Label the nucleus and show the full electron configuration.

[2]

5 Fig. 5.1 shows the quantity of carbon dioxide that was emitted to the atmosphere by industrial company, between 2000 and 2005.

(a) Describe how the company's carbon dioxide emissions changed between 2000 and 2005.

..... [2] (b) The company stated that these carbon dioxide emissions included those relating to the electricity that it used. Explain how using electricity can be responsible for emissions of carbon dioxide. ..... [2] ..... (c) Apart from using less electricity, suggest one other way that the company could reduce its carbon dioxide emissions. ..... [1] 

 11

 (a) In 1997, at a meeting in the city of Kyoto in Japan, many countries in the world an agreement to reduce their emissions of carbon dioxide. The agreement came force in 2005.

 Explain why we need to reduce emissions of carbon dioxide.

 [2]

 (e) Tropical rainforests can help to combat rising levels of carbon dioxide, because they take it from the air and use it in photosynthesis.

 Describe one other reason why we should try to conserve tropical rainforests.

 [2]

(a) A policeman is using a radar gun to measure the speed of a car. 6

www.papaCambridge.com The radar gun emits microwaves which hit the moving car and bounce back to receiver in the radar gun.

A computer in the radar gun calculates the speed of the car.

(i) What type of waves are microwaves?

[1]

[1]

(ii) The waves bounce off the car back towards the radar gun. What is this process called?

.....

.....

- (b) A car has two headlamps and two rear lamps. All four lamps are connected in parallel with each other across a 12V battery.
  - (i) Complete the circuit diagram below to show how the four lamps are connected to the battery. Include one switch in your circuit which will control all four lamps.

www.papaCambridge.com 13 (ii) If the filament in one lamp breaks, the other three stay lit. Explain w happens. ..... ..... (c) Fig. 6.1 shows a spring. The spring is 10 cm long. A metal nut is hung on the spring and the length is now 13 cm. ///// 10 cm 13 cm Fig. 6.1 Calculate the length of the spring if 3 more identical nuts are hung on the spring. Show your working. [2] cm

.....

[2]

www.papacambridge.com (c) Fig. 7.1 shows one of the ways in which a plant called Bryophyllum reprodu grows new plantlets from its leaves.

Fig. 7.1

(i) Name the type of reproduction that is taking place. [1] ..... (ii) The new plants that are produced are clones of the parent plant. Explain what is meant by the term *clone*. ..... ..... [2] .....

	16         student wrote down some properties of alpha, beta and gamma radiations.         aw a line from each property to the correct radiation.         stopped by paper	
<b>8 (a)</b> A s	student wrote down some properties of alpha, beta and gamma radiations.	For
Dra	aw a line from each property to the correct radiation.	nonidae
	stopped by paper alpha	Com
	contains negatively charged particles	
pass	ses through several centimetres of lead beta	
ł	basses through paper but stopped by a few millimetres of aluminium	
	has no mass gamma	
	[3]	
(b) (i) (ii)	Gamma radiation can be used to sterilise surgical instruments. What property of gamma radiation makes it suitable for this purpose? [1] State <b>one</b> other use for radiation from a radioactive source.	
	[1]	1
rac	an experiment a radiation detector was set up and used to measure background diation. The background radiation in the laboratory was found to be 40 counts per nute. What is <i>background radiation</i> ?	
	[1]	1
(ii)	State <b>one</b> source of background radiation.	
	[1]	
(iii)	A radioactive source was placed near the detector and a reading of 1200 counts per minute was recorded. What was the count rate of the radioactive source?	
	counts per minute [1]	1

9 Fig. 9.1 shows apparatus which can be used to reduce copper oxide to copper.

Copper oxide is a black powder and during the reaction metallic copper forms inside the reaction tube.

17

(a) (i) Select from the list of substances below to complete the word equation for the reaction in Fig. 9.1.

.....

[1]

(b) When a student carried out the reaction in Fig. 9.1 she realised the material len the reaction tube was a mixture of metallic copper and unreacted copper oxide.

www.papaCambridge.com In order to separate the metallic copper, she stirred the material from the reaction tube with warm dilute sulphuric acid for several minutes. She then filtered the mixture as shown in Fig. 9.2.

Fig. 9.2 (i) Name the copper compound formed when sulphuric acid reacts with copper oxide. [1] ..... (ii) The copper compound you have named in (i) is soluble. Explain why the method shown in Fig. 9.2 is successful in separating metallic copper from the original mixture of copper and copper oxide. [2] ..... (c) Copper oxide is a compound of a metal and a non-metal. (i) Name the type of chemical bonding in copper oxide. [1] ..... (ii) Explain why there is a strong force of attraction between the copper and oxide particles in copper oxide. 

Describe what would be seen at each of the electrodes when the electrolysis shown in Fig. 9.3 is carried out.

at the positive electrode

.....

at the negative electrode
