**COMBINED SCIENCE** 

0653/22

Paper 2 (Core)

October/November 2010

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 24.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

2 (a) The apparatus shown in Fig. 2.1 can be used to react lead oxide and carbon.

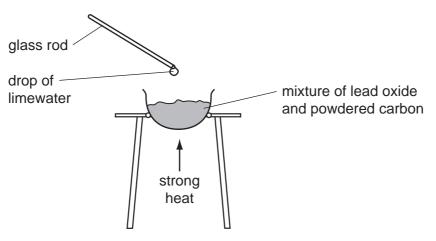

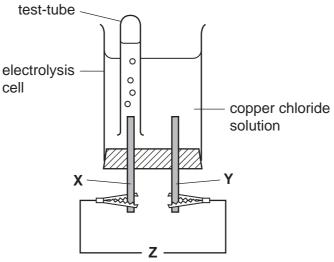

Fig. 2.1

When the mixture is heated, molten metal is formed in the container and the drop of lime water on the end of the glass rod becomes cloudy.

(1)	not write a symbolic equation.	Do
		[2]
(ii)	State <b>one</b> substance, shown in your equation in (i), which is a compound.	
	Explain why this substance is described as a compound and <b>not</b> as an element.	
	substance	
	explanation	
		[3]

www.PapaCambridge.com **(b)** Fig. 2.2 shows some of the apparatus used in the electrolysis of copper solution.

	Z
	Fig. 2.2
(i)	What is missing from position <b>Z</b> in Fig. 2.2?
	[1
(ii)	Name the gas which collects in the test-tube, and explain whether electrode ${\bf X}$ is the anode or the cathode.
	gas
	Electrode <b>X</b> is thebecause
	[2

www.PapaCambridge.com 3 A healthy plant growing in a pot was watered and placed in a sunny window. A transplastic bag was placed over the plant, as shown in Fig. 3.1.

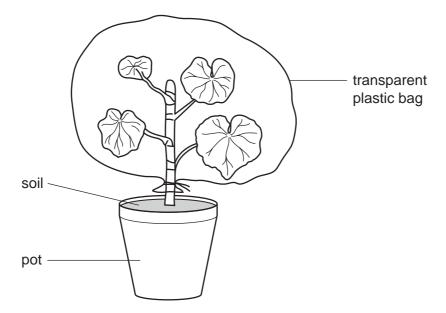

Fig. 3.1

- (a) The temperature near the window fell overnight. The next morning, small droplets of liquid water were visible on the inside of the plastic bag.
  - (i) Name the process by which plant leaves lose water vapour.

		[1]
(ii)	Name the small holes in the leaf through which the water vapour is lost.	
		[1]
iii)	Explain why the water formed droplets of liquid on the plastic bag.	

**(b)** Fig. 3.2 shows a cell from the plant leaf.

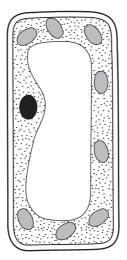

Fig. 3.2

- (i) On the diagram of the cell in Fig. 3.2, label and name **two** structures that would **not** be present in an animal cell. [2]
- (ii) Name the part of the leaf in which this cell could be found.

_	
	11
l l	г. т

(iii) The cell in Fig. 3.2 can photosynthesise.

Write the word equation for photosynthesis.

[2]

(a) Fig. 4.1 shows the speed-time graph for a train.

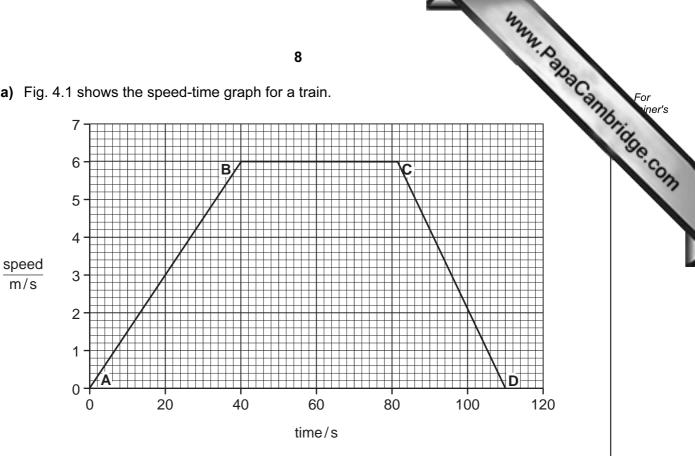

Fig. 4.1

The brakes are applied at **C**. Calculate how long it takes the train to stop.

[1]

- **(b)** Another train, on a journey lasting 10 minutes, travelled at a constant speed of 9 m/s.
  - (i) Show that the distance travelled by the train during this journey was 5400 m. State the formula that you use and show your working.

formula used

working

(ii)	The average force needed for the train to maintain the speed of 9 m/s was 10	1
	Calculate the work done by the train over 10 minutes.	Shi
	State the formula that you use and show your working.

(b) Fig. 6.1 shows a simple electric circuit.

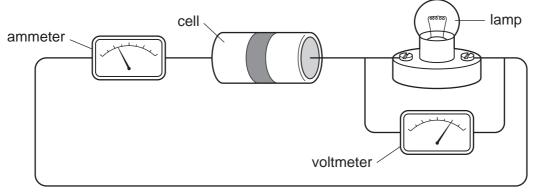

Fig. 6.1

Draw the circuit diagram for the circuit in Fig. 6.1 using the correct symbols.

AMANA RABAR CANADATA For iner's

two-way switch

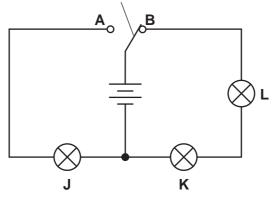

Fig. 6.2

(i) The switch is at position **B**.

Which lamps will be lit? [1]

(ii) The switch is then moved to position A.

What happens to lamps J, K and L?

lamp **J** 

lamp **K** 

lamp **L** [2]

(d) The student has six resistors as shown in Fig. 6.3.

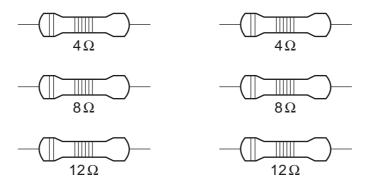

Fig. 6.3

Describe how he can combine **two** of these resistors to get a total resistance of 20 ohms.

[/

## (e) Power stations produce electricity.

www.PapaCambridge.com Six stages in the production of electricity at a coal-fired power station are shown below

- Α electricity produced
- coal burned В
- С steam produced
- D turbine driven by steam
- Ε turbine turns generator
- F water boils

Using the letters A to F, list the stages in the correct order in the boxes below. Two have been done for you.

- 8 Soya beans are an important crop in many tropical and subtropical countries, because contain a lot of protein.
  - (a) Fig. 8.1 shows how the yield of soya beans is affected by the pH of the soil in which they are grown.

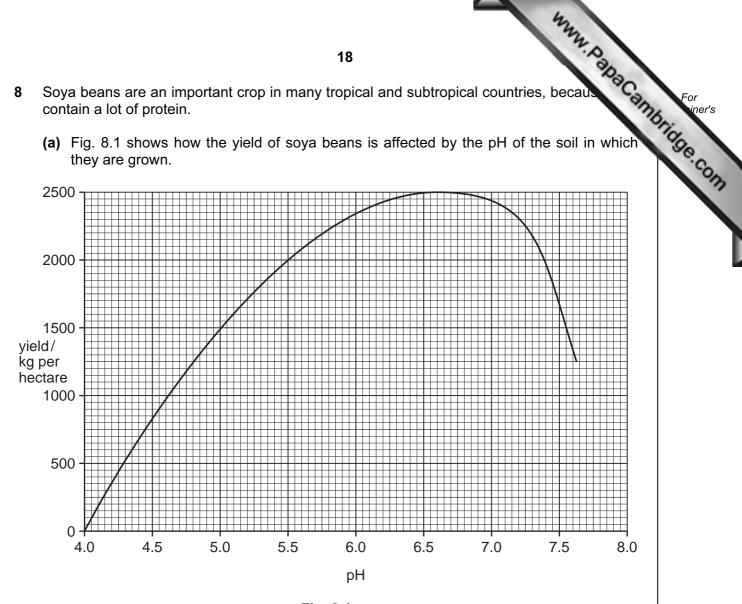

Fig. 8.1

A farmer grows soya beans in a field where the soil has a pH of 5.5.

(1)	what yield of	beans could he get tr	om his crop?
-----	---------------	-----------------------	--------------

	kg per hectare	[1]
(ii)	State the pH range in which soya beans grow best.	
	between and	[1]
(iii)	The farmer decides to add calcium carbonate to the soil in his field.	
	Explain why this would help him to achieve a higher yield of soya beans.	
		[2]

		4
		e field is on a steep slope. Scribe <b>two</b> things the farmer could do to reduce the risk of soil erosion.
(b)	The	e field is on a steep slope.
	Des	scribe <b>two</b> things the farmer could do to reduce the risk of soil erosion.
	1	
	2	
		[2]
(c)		ya beans are seeds. They grow after the flowers on the soya plants have been linated.
	(i)	Soya flowers often have violet-coloured petals.
		Suggest how soya flowers are pollinated.
		[1]
	(ii)	Explain why soya beans only grow after the flowers have been pollinated.
		[2]
	(iii)	Describe how you would test a soya bean seed for protein. State the result you would expect.
		test
		result [2]

(a) Complete Table 9.1 to show the properties of alpha, beta and gamma radiations.

C	Complete Ta	ble 9.1 to show the		alpha, beta and gar	nma radiations:	a Cambridge
		description	Table 9.1 charge	range in air	ionising ability	ae.
	alpha		positive	5 cm	very strong	
	beta	electron		50 cm		
	gamma	wave		many kilometres	weak	

[4]

(b)	Many people have smoke detectors in their houses.
	Smoke detectors contain a radioactive source which emits alpha radiation.
	Explain why the alpha radiation from the smoke detector is not dangerous to people living in the house.
