## CANDIDATE NAME

## CENTRE NUMBER

0653/53
October/November 2010
1 hour 30 minutes

Candidates answer on the Question Paper.
Additional Materials: As listed in Instructions to Supervisors.

## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use a pencil for any diagrams, graphs or rough working.
Do not use staples, paper clips, highlighters, glue or correction fluid.
DO NOT WRITE IN ANY BARCODES.

Answer all questions.
Chemistry practical notes for this paper are printed on page 12.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.

| For Examiner's Use |  |

This document consists of 10 printed pages and $\mathbf{2}$ blank pages.

1 (a) This experiment is to investigate heat loss from water. The tubes represent an different conditions.

Fig. 1.1

- Wrap the same number of layers of absorbent paper around two tubes. You need at least eight layers. Secure the paper using elastic bands. See tube A and tube B in Fig. 1.1.
- Using cold water wet the paper around tube B only, then place both tube A and tube $\mathbf{B}$ in a test-tube rack.
- Mix some of the hot water provided with cold water in a beaker. Measure the temperature with a thermometer until you have about $200 \mathrm{~cm}^{3}$ water at a temperature of $50^{\circ} \mathrm{C}$. This is the temperature at 0 minutes.
- Pour the same amount of water at $50^{\circ} \mathrm{C}$ into tube A and tube B. Do not completely fill the tubes. Leave about 3 cm unfilled at the top. Add thermometers to both tubes and start timing.
- Take the temperature of both tubes every minute for 5 minutes. Record your readings in Table 1.1.

Table 1.1

| time/min | temperature $/{ }^{\circ} \mathbf{C}$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | tube A | tube B | tube C | tube D |
| 0 | 50 | 50 | 50 | 50 |
| 1 |  |  |  |  |
| 2 |  |  |  |  |
| 3 |  |  |  |  |
| 4 |  |  |  |  |
| 5 |  |  |  |  |

(b)

Fig. 1.2

- Take two new tubes.
- Prepare tube C by wrapping cotton wool around it and securing it using elastic bands. See Fig. 1.2. Tube $\mathbf{D}$ is uncovered.
- Place tube C and tube D into the test-tube rack.
- Add sufficient hot water to the beaker to return the temperature of the water to $50^{\circ} \mathrm{C}$. This is the temperature at 0 minutes.
- Pour the same amount of water at $50^{\circ} \mathrm{C}$ into tube $\mathbf{C}$ and tube $\mathbf{D}$. Do not completely fill the tubes. Leave about 3 cm unfilled at the top. Add thermometers to both tubes and start timing.
- Take the temperature of both tubes every minute for 5 minutes. Record your readings in Table 1.1.
(c) (i) For each tube, subtract the temperature of the water after 5 minutes from 50 , to give T, the total temperature drop. Record the results in Table 1.2.
(ii) For each tube, divide $\mathbf{T}$ by 5 to give the average temperature drop per minute.

Record the results in Table 1.2.

Table 1.2

| tube | total temperature drop, <br> $\mathrm{T} /{ }^{\circ} \mathrm{C}$ | average temperature <br> drop $/{ }^{\circ} \mathrm{C}$ per min |
| :---: | :---: | :---: |
| A |  |  |
| B |  |  |
| C |  |  |
| D |  |  |

(d) (i) The absorbent paper represents skin. Compare the results of tube $A$ and to describe the benefits of sweating.

For
$\qquad$
$\qquad$
Explain your answer in terms of heat transfer.
$\qquad$
$\qquad$
(ii) The cotton wool represents fur. Compare the results for tube $\mathbf{C}$ and tube $\mathbf{D}$ to describe the benefits of a fur coat.
$\qquad$
$\qquad$
Explain your answer.
$\qquad$
$\qquad$

BLANK PAGE

2 You are going to determine the relative density of the unknown object $\mathbf{P}$. The m which is a bag of sand, will help you to carry out this experiment.
(a) Clamp the pivot at a height about 300 mm from the bench top. Place the ruler on the pivot at about the 500 mm mark. Adjust the position of the ruler until it is balanced.

Read and record the value of the balance point.
balance point $\qquad$ mm
(b) (i) - Hang the object $\mathbf{P}$ from the $100 \mathrm{~mm}(10 \mathrm{~cm})$ mark on the ruler.

- Hang the mass $\mathbf{M}$ on the other side of the ruler and adjust its position so that the ruler is balanced.
- Measure the distances $\mathbf{d}$ and $\mathbf{d}_{1}$, using your balance point value (see Fig. 2.1) and record them in Table 2.1.

Fig. 2.1
(ii) Hang the object $\mathbf{P}$ from the 150 mm mark of the ruler and balance the ruler again. Measure the new value of $\mathbf{d}$ and $\mathbf{d}_{1}$. Record these in Table 2.1.
(iii) Repeat part (ii), moving the object $\mathbf{P} 50 \mathrm{~mm}$ nearer the pivot each time, to obtain two more sets of values for $\mathbf{d}$ and $\mathbf{d}_{1}$. Record the values in Table 2.1.
(c) (i) You are now going to repeat the experiment with the object completely immersed in water. See Fig. 2.2. Hang the object $\mathbf{P}$ at the 100 mm mark on the ruler so that the object is immersed in water. Adjust the position of the mass $\mathbf{M}$ to restore balance. Measure and record the distances $\mathbf{d}$ and $\mathbf{d}_{2}$. Make sure the balance point of the ruler is maintained. The value for $\mathbf{d}$ is the same as your first value for $\mathbf{d}$ measured in (b)(i).

Fig. 2.2
(ii) Obtain three more values for $\mathbf{d}_{\mathbf{2}}$, hanging object $\mathbf{P}$ at the same distances pivot in part (b) so that the values of $\mathbf{d}$ are the same.

Table 2.1

| $\mathrm{d} / \mathrm{mm}$ | $\mathrm{d}_{1} / \mathrm{mm}$ | $\mathrm{d}_{2} / \mathrm{mm}$ | $\left(\mathrm{d}_{1}-\mathrm{d}_{2}\right) / \mathrm{mm}$ |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

(iii) Complete the last column in the table.
(iv) Plot a graph of $\mathbf{d}_{1}$ (vertical axis) against $\left(\mathbf{d}_{1}-\mathbf{d}_{\mathbf{2}}\right)$. You do not need to start th at zero. Draw the best straight line through these points.

$$
\mathrm{d}_{1}-\mathrm{d}_{2} / \mathrm{mm}
$$

(v) Calculate the relative density of object $\mathbf{P}$ using the formula

$$
\text { relative density of object } P=\frac{d_{1}}{d_{1}-d_{2}}
$$

where $\mathbf{d}_{1}$ is the first value in column 2 and ( $\mathbf{d}_{\mathbf{1}}-\mathbf{d}_{\mathbf{2}}$ ) is the first value in column 4 of Table 2.1.

3 You are going to investigate the reaction between hydrochloric acid and marble carbonate).

You are going to react solutions of different concentrations of hydrochloric acid with a marble chip. All the marble chips are about the same size.
(a) Place 5 test-tubes in the rack. Place a narrow strip of graph paper behind each test-tube so that you can see the grid when viewed through the test-tube.
(i) Using the measuring cylinder, pour $3 \mathrm{~cm}^{3}$ of solution $\mathbf{A}$ into the first test-tube. Pour $3 \mathrm{~cm}^{3}$ of solution B into the second test-tube. Repeat using $3 \mathrm{~cm}^{3}$ of solutions, $\mathbf{C}$, $\mathbf{D}$ and $\mathbf{E}$ in the third, fourth and fifth test-tubes.
(ii) Quickly place one marble chip into each test-tube and start the timer. Shake the tubes from time to time.

Record the reading on the timer in seconds for each tube when the lines on the graph paper can be clearly seen through the acid in the tube. Do not stop the timer until all the reactions have finished.

Record the times in Table 3.1.

Table 3.1

| experiment | solution of <br> hydrochloric acid | concentration of acid <br> ${\mathbf{m o l} / \mathbf{d m}^{3}}$ | time/s |
| :---: | :---: | :---: | :---: |
| 1 | A | 0.25 |  |
| 2 | B | 0.50 |  |
| 3 | C | 1.0 |  |
| 4 | D | 1.5 |  |
| 5 | E | 2.0 |  |

(b) Plot your results on the grid. Put time on the vertical axis and concentra hydrochloric acid on the horizontal axis.

Draw the best straight line.

(c) Explain why it is difficult to see through the tubes at the beginning of the reaction.
$\qquad$
$\qquad$
(d) Draw on the grid a line to represent a set of results produced if the temperature of the acid is increased. Label this line $\mathbf{T}$.

## CHEMISTRY PRACTICAL NOTES

## Test for anions

| anion | test | test result |
| :--- | :--- | :--- |
| carbonate $\left(\mathrm{CO}_{3}{ }^{2-}\right)$ | add dilute acid | effervescence, carbon dioxide <br> produced |
| chloride $\left(\mathrm{Cl} l^{-}\right)$ <br> [in solution] | acidify with dilute nitric acid, then <br> add aqueous silver nitrate | white ppt. |
| nitrate $\left(\mathrm{NO}_{3}-\right)$ <br> [in solution] | add aqueous sodium hydroxide <br> then aluminium foil; warm carefully | ammonia produced |
| sulfate $\left(\mathrm{SO}_{4}{ }^{2-}\right)$ <br> [in solution] | acidify then add aqueous barium <br> chloride or aqueous barium nitrate | white ppt. |

## Test for aqueous cations

| cation | effect of aqueous sodium hydroxide | effect of aqueous ammonia |
| :--- | :--- | :--- |
| ammonium $\left(\mathrm{NH}_{4}^{+}\right)$ | ammonia produced on warming | - |
| copper(II) $\left(\mathrm{Cu}^{2+}\right)$ | light blue ppt., insoluble in excess | light blue ppt., soluble in excess <br> giving a dark blue solution |
| iron(II) $\left(\mathrm{Fe}^{2+}\right)$ | green ppt., insoluble in excess | green ppt., insoluble in excess |
| iron(III) $\left(\mathrm{Fe}^{3+}\right)$ | red-brown ppt., insoluble in excess | red-brown ppt., insoluble in excess |
| zinc $\left(\mathrm{Zn}^{2+}\right)$ | white ppt., soluble in excess giving <br> a colourless solution | white ppt., soluble in excess giving <br> a colourless solution |

## Test for gases

| gas | test and test results |
| :--- | :--- |
| ammonia $\left(\mathrm{NH}_{3}\right)$ | turns damp red litmus paper blue |
| carbon dioxide $\left(\mathrm{CO}_{2}\right)$ | turns limewater milky |
| chlorine $\left(\mathrm{Cl}_{2}\right)$ | bleaches damp litmus paper |
| hydrogen $\left(\mathrm{H}_{2}\right)$ | "pops" with a lighted splint |
| oxygen $\left(\mathrm{O}_{2}\right)$ | relights a glowing splint |
