## Cambridge IGCSE ${ }^{\text {TM }}$

CENTRE NUMBER

## CANDIDATE

 NUMBER
## COMBINED SCIENCE

You must answer on the question paper.
No additional materials are needed.

## INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

## INFORMATION

- The total mark for this paper is 40 .
- The number of marks for each question or part question is shown in brackets [ ].

1 (a) A student estimates the concentration of vitamin C in a sample of fruit juice.
When iodine solution is added to a mixture of starch and fruit juice the starch turns the iodine blue-black. The vitamin C turns the iodine colourless.

The amount of iodine needed to keep the blue-black colour is an indicator of the concentration of vitamin C.

The student has four different concentrations of vitamin C and a fruit juice with an unknown vitamin C concentration.

## Procedure

The student:
Step 1 Uses a syringe to add $10 \mathrm{~cm}^{3}$ of $1.00 \%$ vitamin C solution to a clean test-tube.
Step 2 Adds $0.5 \mathrm{~cm}^{3}$ of starch solution to the test-tube and mixes well.
Step 3 Fills a $10 \mathrm{~cm}^{3}$ syringe with $10 \mathrm{~cm}^{3}$ of iodine solution.
Step 4 Adds drops of iodine solution to the starch-vitamin C mixture until the blue-black colour remains.

Step 5 Records in Table 1.1 the volume of iodine solution remaining in the syringe.
Step 6 Refills the syringe to contain $10 \mathrm{~cm}^{3}$ of iodine solution.
Step 7 Repeats Step 1 to Step 6 using 0.75\%, 0.50\% and 0.25\% concentrations of vitamin C.
(i) Fig. 1.1 shows the syringe after adding iodine solution to the $0.25 \%$ concentration of vitamin C.

Fig. 1.1

Record in Table 1.1, the volume of iodine solution remaining in the syringe.
Table 1.1

| percentage concentration <br> of vitamin C | volume of iodine solution <br> remaining <br> $/ \mathrm{cm}^{3}$ | volume of iodine solution <br> added <br> $/ \mathrm{cm}^{3}$ |
| :---: | :---: | :---: |
| 1.00 | 2.2 | 7.8 |
| 0.75 | 4.0 | 6.0 |
| 0.50 | 6.2 | 3.8 |
| 0.25 |  |  |

(ii) Calculate the volume of iodine solution added to the $0.25 \%$ vitamin C solution.

Use the equation shown.

| volume of iodine solution <br> added |
| :---: |$=10-$| volume of iodine solution <br> remaining |
| :---: |

Record this value in Table 1.1.
(iii) On the grid, plot a graph of the volume of iodine solution added (vertical axis) against the percentage concentration of vitamin C .

(iv) Draw the line of best-fit.
(v) The student repeats Step 1 to Step 4 of the procedure in (a) using $10 \mathrm{~cm}^{3}$ of fruit juice instead of the vitamin C solutions.

Fig. 1.2 shows the syringe after adding the iodine solution to the fruit juice.

Fig. 1.2

Record the volume of iodine solution remaining and the volume added when the student tests the fruit juice.
volume of iodine solution remaining = ..... $\mathrm{cm}^{3}$
volume of iodine solution added $=$ ..... $\mathrm{cm}^{3}$
(vi) Use your graph to estimate the percentage concentration of vitamin C in the fruit juice. percentage concentration of vitamin C in the fruit juice $=$
(vii) The student uses the same syringe for Step 1 and Step 7.

Suggest why this is a possible source of error.
$\qquad$
$\qquad$
(b) Repeating the procedure increases confidence in the results.
(i) Suggest one other reason why the procedure for each concentration should be repeated.
$\qquad$
$\qquad$
(ii) Suggest one other way to improve confidence in your estimate in (a)(vi).
$\qquad$
$\qquad$
(c) State the reagent that is used to test for protein. Include the observation for a positive result. reagent $\qquad$
observation
[Total: 13]

2 A student investigates the components of a fertiliser.
The fertiliser contains insoluble sand and a soluble salt.
The student has 5.00 g of the fertiliser.

## Procedure

The student:
Step 1 adds distilled water to the fertiliser in a beaker
Step 2 stirs the mixture for two minutes
Step 3 filters the mixture into a boiling tube
Step 4 washes the residue of sand on the filter paper with distilled water
Step 5 dries the sand on the filter paper in an oven.
Step 6 records in Table 2.1 the mass of the sand and filter paper.
Step 7 removes the sand and measures the mass of the filter paper.
(a) Fig. 2.1 shows the balance reading from Step 7.
mass of the filter paper
1.052 g

Fig. 2.1
Record in Table 2.1 the mass of the filter paper to two decimal places.
Table 2.1

|  | mass <br> 1 g |
| :--- | :---: |
| sand and filter paper | 3.87 |
| filter paper |  |

(b) (i) Calculate the mass of sand in the sample of fertiliser.

Use the equation shown.

$$
\text { mass of sand = } 3.87 \text { - mass of filter paper }
$$

(ii) Calculate the percentage of sand in the fertiliser.

Use the equation shown.

$$
\text { percentage of sand }=\frac{\text { mass of sand }}{5.00} \times 100
$$

percentage of sand $=$
(c) Explain why the mixture is stirred in Step 2.
$\qquad$
$\qquad$
(d) Explain why the residue of sand is washed with distilled water in Step 4.
$\qquad$
$\qquad$
(e) The student does a flame test on the filtrate.

A lilac flame is observed.
Circle the cation (positive ion) in the filtrate.
lithium copper(II) potassium sodium
(f) The student adds dilute nitric acid followed by aqueous barium nitrate to the filtrate.

A white precipitate is observed.
Identify the anion (negative ion) in the filtrate.

3 Cetyl alcohol is a white solid with a melting point of $49^{\circ} \mathrm{C}$. If salt is mixed with cetyl alcohol the melting point decreases.

Some of the apparatus needed to determine the melting point of cetyl alcohol is shown in Fig. 3.1.

Fig. 3.1
Plan an investigation to find the relationship between the mass of salt added and the decrease in the melting point of cetyl alcohol.

You may use any common laboratory apparatus in your plan.
You are provided with:

- powdered cetyl alcohol
- powdered salt
- the apparatus shown in Fig. 3.1.

In your plan include:

- the additional apparatus needed
- a brief description of the method and an explanation of any safety precautions you will take
- what you will measure
- which variables you will keep constant
- how you will process your results to draw a conclusion.

You may include a table that can be used to record the results if you wish.
You do not need to include any results in the table.

4 A student investigates the resistance of different combinations of two identical lamps $\mathbf{L}$ and $\mathbf{M}$.
(a) Fig. 4.1 shows a circuit using lamp $\mathbf{L}$.

Fig. 4.1
The student closes the switch. Lamp L lights up.
Fig. 4.2 shows the readings on the voltmeter and ammeter.

Fig. 4.2
(i) Record the potential difference $V_{L}$ across lamp $L$.
$V_{L}$
(ii) Record the current $I_{L}$ in the circuit.
$I_{L}$
(iii) The student opens the switch.

Calculate the resistance $R_{L}$ of lamp $\mathbf{L}$.
Use the equation shown.

$$
R_{L}=\frac{V_{L}}{I_{L}}
$$

## (b) Procedure

The student:

- disconnects the voltmeter
- adds a second identical lamp $\mathbf{M}$ to the circuit in series with lamp $\mathbf{L}$, as shown in Fig. 4.3
- reconnects the voltmeter to measure the combined potential difference across lamps $\mathbf{L}$ and $\mathbf{M}$.
(i) Complete the circuit diagram in Fig. 4.3 to show how the student connects the voltmeter.

Fig. 4.3
(ii) The student closes the switch.

The lamps light up.
Fig. 4.4 shows the readings on the voltmeter and ammeter.

Fig. 4.4
Record the combined potential difference $V_{S}$ across lamps $L$ and $\mathbf{M}$.
$\qquad$ V

Record the current $I_{S}$ in the circuit.

(iii) The student opens the switch.

Calculate the combined resistance $R_{S}$ of lamps $\mathbf{L}$ and $\mathbf{M}$ in series.
Use the equation shown.

$$
R_{S}=\frac{V_{S}}{I_{S}}
$$

Include the unit in your answer.
unit

## (c) Procedure

The student:

- disconnects the voltmeter
- disconnects the two lamps and reconnects lamp $\mathbf{L}$ in parallel with lamp $\mathbf{M}$
- connects the ammeter to measure the total current through the circuit
- reconnects the voltmeter to measure the potential difference across the parallel lamps.
(i) Complete the circuit diagram in Fig. 4.5 to show the parallel circuit. The power supply and switch are already shown.
power supply

Fig. 4.5
(ii) The student closes the switch. The lamps light up.

The combined potential difference $V_{P}$ across lamps $\mathbf{L}$ and $\mathbf{M}$ is 2.25 volts.
The total current $I_{P}$ read by the ammeter in the circuit is 0.50 amps .
The student opens the switch.
Calculate the power, $P_{P}$ produced by lamps $\mathbf{L}$ and $\mathbf{M}$ in parallel.
Use the equation shown.

$$
P=V \times I
$$

$$
P_{P}
$$

(iii) The power, $P_{S}$ produced by lamps $\mathbf{L}$ and $\mathbf{M}$ in series is 0.47 W .

A student predicts the power of the lamps $\mathbf{L}$ and $\mathbf{M}$ in parallel is greater than the power of the lamps $\mathbf{L}$ and $\mathbf{M}$ in series.

Describe an observation of the lamps that would confirm the student's prediction.
$\qquad$
$\qquad$
(d) Suggest why the student opens the switch after each measurement.
$\qquad$
$\qquad$
(e) Another student predicts that the combined resistance of lamps $\mathbf{L}$ and $\mathbf{M}$ in series is twice the resistance of lamp L.

State if the values from (a)(iii) and (b)(iii) support the student's prediction.
Explain your answer.
