1		Red is said to be a <i>primary</i> Explain what is meant by this other secondary colour.			be a <i>secondar</i> primary colour	
		explanation				
		primary colour				
		secondary colour				[3]
	(b)	Below is a list of some waves.				
		gamma ultrasound	infra-red ultraviolet	radio visible light	sound	
	,	Write down one wave from the	e list that is			
		(i) a transverse wave,				
						[1]
	(ii) a longitudinal wave,				
						[1]
	(i	ii) emitted by hot objects but	cannot be seen	by the human e	ye.	
						[1]

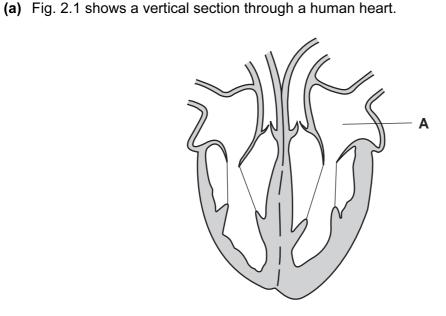

Fig. 2.1

- (i) Name the part labelled A. (ii) Using a labelling line and the letter **M**, label the muscular wall of the left ventricle.[1]
- (b) The muscular walls of the heart are supplied with oxygen by blood that flows through the coronary arteries.

Explain why a person may suffer a heart attack if one of the coronary arteries becomes blocked.

..... [3]

	6
The ch	nemical symbol of the element lithium is shown below.
	6 nemical symbol of the element lithium is shown below. 7 3 1 3 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5
(a) (i)	State the number of electron shells (energy levels) in a lithium atom.
	[1]
(ii)	Lithium is obtained as the free element by electrolysis of molten lithium chloride, LiC <i>l.</i> Explain briefly how lithium ions, Li ⁺ , become atoms at the cathode in this process.
	[1]
(b) Lit	hium reacts with water according to the symbolic equation below.
(b) Lit	thium reacts with water according to the symbolic equation below. $2Li + 2H_2O \longrightarrow 2LiOH + H_2$
	$2Li + 2H_2O \longrightarrow 2LiOH + H_2$
	$2Li + 2H_2O \longrightarrow 2LiOH + H_2$
	$2Li + 2H_2O \longrightarrow 2LiOH + H_2$ (cplain why fire-fighters must not use water to try to extinguish burning lithium.

The symbolic equation for this reaction is

 $2LiOH + CO_2 \longrightarrow Li_2CO_3 + H_2O$

	44	
	7	For
(i)	7 The formula and charge of a lithium ion is Li ⁺ . Deduce the formula and charge of the carbonate ion. Explain your answer.	Examiner's Use
	[2]	
(ii)	A space vehicle carries a crew of 7 astronauts. Each astronaut exhales 18 moles of carbon dioxide every day.	
	Calculate the total number of moles of carbon dioxide that the crew will exhale during a mission into space which lasts 10 days. Show your working.	
	[2]	
(iii)	Calculate the mass of lithium hydroxide crystals which must be loaded on board the space vehicle to react with all the carbon dioxide exhaled during the mission. Show your working.	
	[3]	
	[2]	
(iv)	Suggest why lithium hydroxide and not the hydroxide of any of the other Group 1 metals is used on the space vehicle.	
	וכז	
	[2]	

www.PapaCambridge.com 8 4 Fig. 4.1 shows a flying squirrel. A flying squirrel uses large flaps of skin as a parachute to enable it to fall, glide and land safely. The air trapped under these flaps, a squirrel falls, provides an upward force called air resistance. Fig. 4.1 (a) (i) As the squirrel starts to fall, it is accelerating. State the meaning of the term accelerating. [1] (ii) The squirrel weighs 20 N. Suggest a value for the air resistance while the squirrel is accelerating. air resistanceN Explain your answer. [2] (iii) At one point as the squirrel falls, the resultant downward force on the squirrel is 10 N. Calculate the acceleration of the squirrel if its mass is 2 kg. Show your working and state the formula that you use. formula used working

.....[2]

	9 er in its fall, the squirrel reaches a steady speed (terminal velocity) of 3 m/s. State the value of the air resistance now. air resistance N Explain your answer.	
	9	
(b) Lat	er in its fall, the squirrel reaches a steady speed (terminal velocity) of 3 m/s.	acan
(i)	State the value of the air resistance now.	
	air resistance N	
	Explain your answer.	
		[2]
(ii)	Explain why the value of the air resistance has changed.	
(iii)	The surface area of the squirrel on which the air resistance acts is 0.4 m^2 . Use your answer to (b)(i) and the formula	[.]
	pressure = $\frac{\text{force}}{\text{area}}$	
	to calculate the pressure on the squirrel.	
	Show your working.	
		[2]

www.papaCambridge.com Fig. 5.1 shows a section through a human eye. The eye is focused on a distant object 5

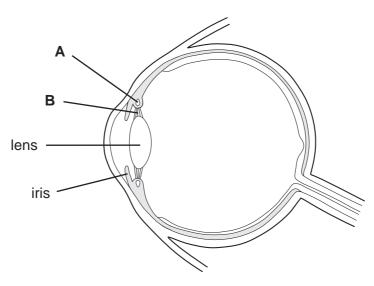

Fig. 5.1

- (a) When the eye focuses on a near object, the lens becomes thicker.
 - (i) Describe the changes that will take place in parts A and B when the eye focuses on a near object.

Α.	
в.	
	[2]

(ii) Explain why the lens needs to become thicker in order to focus on a near object. You may draw a diagram if it helps your answer.

..... [3]

(b) The iris is the coloured part of the eye. It can become wider or narrower to regu amount of light that can reach the retina.

www.papaCambridge.com The colour of the iris of a rabbit is determined by the rabbit's genes. A rabbit with the genotype **Bb** or **BB** has brown eyes. A rabbit with the genotype **bb** has yellow eyes.

(i) Use a genetic diagram to explain how two rabbits with brown eyes may have young with yellow eyes.

[3]

Occasionally, a mutation occurs in some of the cells of the iris, which may result in the iris becoming a different colour.

(ii) Ionising radiation may cause mutation. Explain how it does this.

......[1]

(iii) Explain why this change in colour of the iris will not be passed on to the rabbit's offspring.

..... [2]

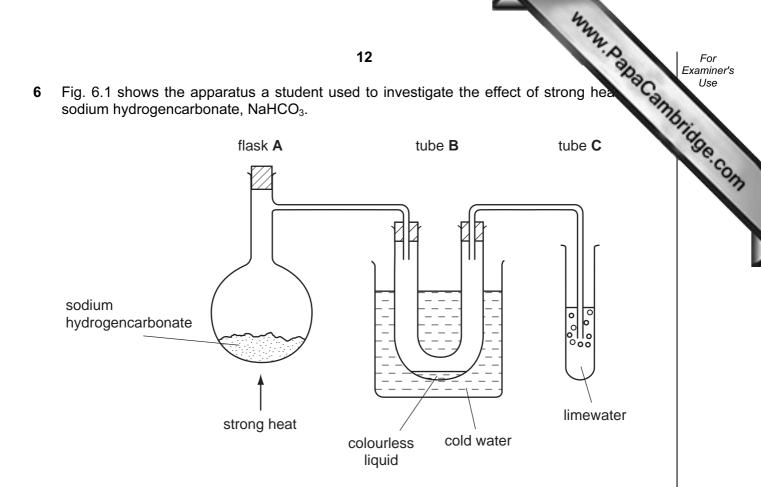

Fig. 6.1

Table 6.1 shows observations the student made before and after heating the sodium hydrogencarbonate for several minutes.

Table (6.'	1
---------	-----	---

	before heating	after heating
flask A	white solid	white solid
tube B	tube empty	colourless liquid has condensed
tube C	clear liquid	liquid has become cloudy

(a) State two observations from Table 6.1 which show that a chemical reaction occurs when sodium hydrogencarbonate is heated.

1.	
-	
2.	
	[2]

	12	
	13	For Examine
(b)	An incomplete symbolic equation for the reaction in Fig. 6.1 is shown below.	Use
	$2NaHCO_3 \longrightarrow Na_2CO_3 + CO_2 + \dots$	Stid
	13 An incomplete symbolic equation for the reaction in Fig. 6.1 is shown below. $2NaHCO_3 \rightarrow Na_2CO_3 + CO_2 + \dots$ Use the incomplete equation above to deduce the name of the colourless liquid which condenses in tube B. Explain your answer.	96.C
	[2]	
(c)	Sodium carbonate is sometimes added to hard water in order to soften it. The symbolic equation below shows the reaction that occurs when sodium carbonate is added to a sample of hard water. In this equation the symbols (aq) and (s) show whether the substance is an aq ueous solution or a s olid respectively.	
	$Na_2CO_3(aq) + CaCl_2(aq) \longrightarrow 2NaCl(aq) + CaCO_3(s)$	
	(i) Name the type of chemical reaction shown above.	
	(ii) Explain why this reaction softens the water.	
	[2]	
(d)	Sodium carbonate is mixed with silicon(IV) oxide and other oxides to make glass. The mixture has to be heated to a very high temperature in order to melt it and allow the glass to form. Explain, in terms of their structures, why compounds like sodium carbonate and silicon(IV) oxide have such high melting points.	
	[3]	

- (a) A car has two headlight lamps at the front and two rear light lamps at the back. 7 lamps are connected in parallel with each other across a 12V battery.
- www.papaCambridge.com (i) Draw a circuit diagram to show how the two headlight lamps are connected to the battery. Include a switch in your circuit to control the two headlight lamps.

[3]

(ii) If one lamp fails, the other stays lit. Explain why this happens.

......[1]

(iii) Each headlight lamp takes a current of 5 A and each rear light lamp takes a current of 1A. What is the total current taken by these four lamps?

Show your working

[2]

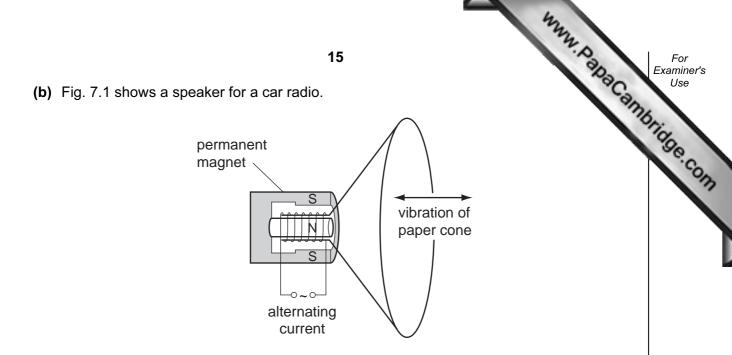

Fig. 7.1

Explain why the cone of the speaker vibrates when an alternating current passes through the coil.

			•••
			•••
		[3]
(c)		e pressure of the air in car tyres must be correct to give a good grip on the roa face.	ad
	(i)	Explain in terms of particles why adding more air to a car tyre increases the pressure in the tyre.	ıe
			•••
		[2]
	(ii)	Tyres become warmer during long journeys. Explain in terms of particles why th will result in an increase in tyre pressure.	is
		[2]

www.papaCambridge.com 16 8 A gardener in a country with a cool climate grows peppers in a glasshouse. Fig. 8. how light intensity affects the rate of growth of the pepper plants. С В rate of growth light intensity Fig. 8.1 (a) Explain the reasons for the shape of the graph between **A** and **B**, between **B** and **C**. [3] (b) The gardener thinks she might be able to increase the growth of her plants by burning a fuel such as methane in the glasshouse. (i) Write a word equation for the complete combustion of methane. [1] (ii) State two reasons why burning methane in the glasshouse might increase the growth of the pepper plants. 1. _____ 2. [2]

		422
		17 Souther way of increasing the growth of the plants is to provide them with a souther use obtaining nitrogen
(c)		other way of increasing the growth of the plants is to provide them with a staining nitrogen.
	(i)	Suggest one compound which can be found in a fertiliser and which provides nitrogen to the plants in a form that they can use.
		[1]
	(ii)	Explain why extra nitrogen can increase the growth of plants.
		[2]
	(iii)	Explain how the careless use of nitrogen-containing fertilisers near to streams and lakes can harm the organisms that live in them.
		[3]

www.papaCambridge.com (a) Table 9.1 shows some information about two elements X and Y. Both elements 9 the third period of the Periodic Table. Complete the table by writing the words high or low in the empty boxes. Two of The boxes have already been completed.

element	group number in Periodic Table	melting point	electrical conductivity	pH of element oxide in water
x	2	high		
Y	7	low		
				[2]

(b) A compound from which the metal titanium can be extracted is ilmenite, TiFeO₃. In order to obtain titanium, ilmenite is first processed to form titanium chloride. Titanium chloride is then reacted with magnesium. Symbolic equations for these two reactions are shown below.

reaction 1 $2\text{TiFeO}_3 + 7\text{C}l_2 + 6\text{C} \longrightarrow 2\text{TiC}l_4 + 2\text{FeC}l_3 + 6\text{CO}$ reaction 2 $TiCl_4 + 2Mg \longrightarrow 2MgCl_2 + Ti$

(i) Name one element which has been oxidised in reaction 1. Explain your answer.

.....

(ii) Fig. 9.1 shows a diagram of a chlorine atom, showing only the outer electron shell.

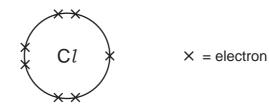

Fig. 9.1

	19 N. D. J.
	19 Draw a diagram to show how the outer electrons are arranged in a mole chlorine.
(iii)	[2] Describe how the arrangement of the electrons around the magnesium atoms changes during reaction 2 .
	[2]
Allo	oys containing large amounts of titanium are widely used to make replacement hip nts.
	pelvis replacement hip joint made of titanium alloy
fe	emur (thigh bone)
_	
	ggest why an alloy of titanium rather than pure titanium is more suitable for making placement hip joints which have to carry a person's weight.
	placement hip joints which have to carry a person's weight.
