Paper 6 Alternative to Practical

October/November 2010

1 hour

Candidates answer on the Question paper

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 18 printed pages and 2 blank pages.

A student did an experiment to investigate heat loss from water. The tubes she 1 Fig. 1.1 represented animals in different conditions.

- Fig. 1.1
- The student wrapped absorbent paper around tube A and tube B, then soaked the paper around tube B with water.
- She covered tube **C** with a layer of cotton wool and she left **tube D** uncovered.
- The student then poured water at a temperature of 50 °C into the four tubes and started timing.
- She took the temperature of the tubes every minute for five minutes.
- The results are shown in Table 1.1.

Table 1.1

time/min	temperature/°C														
unie/min	tube A	tube B	tube C	tube D											
0	50	50	50	50											
1			42	38											
2	39	30	41	37											
3	38	29	40	35											
4	37	28	39	34											
5	36	27	38	33											

www.PapaCambridge.com (a) Read the thermometer scales for tube A and tube B in Fig. 1.2 and enter the rein Table 1.1.

Fig. 1.2

- (b) (i) For each tube, subtract the temperature of the water after 5 minutes from 50 °C, to give **T**, the total temperature drop. Record the results in Table 1.2.
 - (ii) For each tube, divide T by 5 to give the average temperature drop per minute. Record the results in Table 1.2. [4]

Table 1.2

tube	T, total temperature drop/°C	average temperature drop/°C per min
Α		
В		
С		
D		

(c)	(i)	Suggest a reason for the relatively large initial drop in temperature.
	(ii)	Explain the purpose of tube D .
	` ,	
		[2]

(d)	The absorbent paper represents skin. Compare the results of tube A and tub describe the benefits of sweating.
	Explain your answer in terms of heat transfer.
	[2]

i ana Cambridge Com

Please turn over for Question 2.

		Why.
		6
(a)	(i)	A student is given a mixture of sand, iron filings and zinc sulfate powder. What are the use to separate out the iron filings?
		What can she use to separate out the iron filings?
		[1]
	(ii)	She adds water to the remaining sand and zinc sulfate and stirs the mixture.
		Draw a labelled diagram of the apparatus she can use to separate out the sand.
		[2]
	(iii)	She is now left with zinc sulfate solution. Describe how she can obtain dry crystals of zinc sulfate.
		[2]
(b)	The	student shows the crystals to a friend, who does not believe they are zinc sulfate.
(2)	(i)	Describe a test that will show sulfate ions are present in a solution of the crystals.
	(-)	test
		rocult
	/ii\	Now, describe a test that will show that zinc ions are present in the solution.
	(ii)	test
		result [2]

(c)	The separation in (a)(ii) will not work if the mixture contains sand and lead instead of zinc sulfate.	For iner's
	Suggest a reason for this.	Tale

(e) Suggest how the ammeter readings in Table 3.1 will change if an increased length of wire **Z** is used.

[1]

4 This question is about osmosis. Water will move from a dilute solution into a conce solution through a partially permeable membrane.

www.papaCambridge.com A student knew that if she put potato pieces into a range of solutions, water would enter the potato if the solution was more dilute than the potato. Water would leave the potato if the solution was more concentrated than the potato.

A student wanted to find the concentration inside the potato.

- She prepared salt solutions of different concentrations and poured each one into a separate petri dish.
- She prepared 5 chips of potato of mass approximately 5 g. She recorded the mass of each one in Table 4.1.
- She cut the first chip into 10 pieces and placed them into the first solution. See Fig. 4.1.
- She repeated this with the rest of the chips so that each solution contained one of the weighed and cut chips.
- She left the pieces in the solutions for 30 minutes. After this time she took the pieces out of each dish, blotted excess solution from the pieces, then weighed them again and recorded their new masses.

Fig. 4.1

Results

Table 4.1

concentration of salt solution in mol/dm³	first mass of potato/g	new mass of potato/g	change in mass/g
0 (distilled water)	5.2	5.5	
0.1	5.3	5.4	
0.2	5.2	5.1	
0.3	5.3	5.0	
0.4	5.2	4.7	

(a) Subtract the new mass from the first mass to find the change in mass of the potato in each salt solution and complete Table 4.1. [2]

concentration of salt solution in mol/dm³

(c)	The concentration inside the potato is equal to the concentration of salt solution produces no change in mass.	1
	Find this value from the graph.	
	concentration inside the potato =mol/dm ³ [1]
(d)	(i) Describe one possible source of error in her experiment.	
	(ii) How can she improve the accuracy of her results?	
	[2]
(e)	The solution of concentration 0 mol/dm³ was distilled (deionised) water.	
	Suggest and explain what would happen if red blood cells were placed in distilled water.	l

Please turn over for Question 5.

www.PapaCambridge.com

Poloric ac. For iner's

[2]

- 5 (a) A student is investigating the reaction between marble chips and hydrochloric ac
 - A marble chip is placed in a test-tube.
 - A piece of graph paper is placed behind the tube.
 - 3 cm³ of 0.25 mol / dm³ hydrochloric acid is added to the marble and the stopclock is started.
 - When he can **clearly see** the graph paper through the contents of the tube, he stops the clock.
 - He records the time in Table 5.1.
 - The experiment is repeated using different concentrations of acid.

Use the diagrams of the stopclocks in Fig. 5.1 to complete Table 5.1.

concentration of acid 0.5 mol/dm³

concentration of acid 1.0 mol/dm³

Fig. 5.1

Table 5.1

concentration of acid in mol/dm³	0.25	0.5	1.0	2.0
time taken/s	210			960

(b)	Why can the graph paper not be seen through the contents of the tube when marble is reacting with acid?	the
		[1]
(c)	The marble is in excess. What can be seen in the test-tube after the reaction finished that proves this?	has
		[1]

(d) (i) Plot the results on the grid below and draw a line of best fit.

time/s

(ii) Use your graph to estimate the concentration of the acid used if the reaction finishes at 10 minutes exactly.

[1]

- (e) Draw on the grid a line to represent a set of results produced if the temperature of the acid is increased. Label this line T. [1]
- (f) State one possible source of error in the experiment in part (a).

[1]

Anno Barrier's

[3]

www.PapaCambridge.com A metre rule balances when it is suspended from a hook at the 50 cm mark. A toy me 6 is tied to one side, 40 cm from the balance point. A block of iron is hung on the other side that the rule balances again, as in Fig. 6.1.

Fig. 6.1

The dog is moved to another position and the block is moved until the rule balances again. This is repeated several times and the results recorded in Table 6.1.

Table 6.1

distance of dog from hook d/cm	40.0	35.5	29.5	26.0	21.0	15.5	10.0
distance of iron from hook d ₁ /cm	49.5	44.5		32.5		20.0	12.5

(a) (i) Read the rulers in Fig. 6.2 and Fig. 6.3. Calculate the distances \mathbf{d}_1 of the block of iron from the balance point.

Record these distances in Table 6.1.

[2]

Fig. 6.2

www.PapaCambridge.com

Fig. 6.3

(ii) The experiment is repeated, but this time the toy dog is immersed in a large beaker of water, as in Fig. 6.4.

Fig. 6.4

The same values of ${\bf d}$ are used and the iron block moved to balance the rule each time.

www.PapaCambridge.com Read the rulers in Fig. 6.5 and Fig. 6.6, then calculate the distances d₂ of the of iron from the balance point.

Record these distances in Table 6.2.

Fig. 6.5

Table 6.2

distance of dog from hook d/cm	40.0	35.5	29.5	26.0	21.0	15.5	10.0
distance of iron from hook d₂/cm	43.0	40.5		29.5		18.0	11.5

(iii) The distances, d_2 , of the block are subtracted from the distances, d_1 .

Use data from Table 6.1 and Table 6.2 to help you complete Table 6.3. [1]

Table 6.3

distance of dog d/cm	40.0	35.5	29.5	26.0	21.0	15.5	10.0
(d ₁ – d ₂)/cm	6.5	4.0		3.0		2.0	1.0

(b) The results of a similar experiment were plotted in a graph, Fig. 6.7 and the line fit drawn.

Fig. 6.7

Calculate the gradient of the line, which is equal to the density of the metal of the toy dog.

Show on the graph how you did this.

d/cm

(c) The density can also be found using the mass of the toy dog in grams, and its

in cubic centimetres.	6.
Describe in detail how you would find the volume of the toy dog.	Tag
