**International General Certificate of Secondary Education** 

## MARK SCHEME for the May/June 2012 question paper for the guidance of teachers

## 0654 CO-ORDINATED SCIENCES

0654/53

Paper 5 (Practical), maximum raw mark 45

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2012 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

[1]

(iii) V and I readings for 60, 80 and 100 cm;

scale: linear and good use of grid;

(ii) working shown on graph or below graph;

gradient calculated correctly;

decimal places;

(iv) answer (b)(iii)/10000;

(b) (i) axes: correctly labelled with units;

V increases and I decreases down the table;

points: 4 points plotted correctly within ½ square;

(iv) all R values calculated for 5 or 4 sets of readings to same number of

line: best straight line passing through (0,0) within ½ square;

(iii) cross-sectional area, C calculated correctly to 2 significant figures;

    (a) (i) residue: green;
              filtrate: colourless;
                                                                                                               [2]
         (ii) observations:
              bubbles/fizzes/effervesces;
              green solution;
              conclusion:
              carbonate / CO<sub>3</sub><sup>2-</sup>;
                                                                                                               [3]
        (iii) observation:
              blue ppt;
              conclusion:
              copper/Cu<sup>2+</sup>/Cu(II);
                                                                                                               [2]
    (b) (i) observation:
              white ppt;
              conclusion:
              chloride/Cl^-;
                                                                                                               [2]
         (ii) observation:
              no change;
              conclusion:
              not sulfate/not SO<sub>4</sub><sup>2-</sup>;
                                                                                                               [2]
        (iii) observation:
              no ppt;
              litmus stays red;
              conclusion:
              not ammonium (ion)/no ammonia;
```
