CANDIDATE NAME						
CENTRE NUMBER				CANDIDATE NUMBER		

CHEMISTRY 5070/04

Paper 4 Alternative to Practical

May/June 2007

1 hour

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE ON ANY BARCODES.

Answer all questions.

The number of marks is given in brackets [] at the end of each question or part question.

At the end of the examination, fasten all your work securely together.

For Examiner's Use

This document consists of 18 printed pages and 2 blank pages.

1 (a) Name the apparatus shown below.

o			,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	 	 	
	100	80	60	40	20	
U						

.....[1

(b) What volume of gas is in the apparatus?

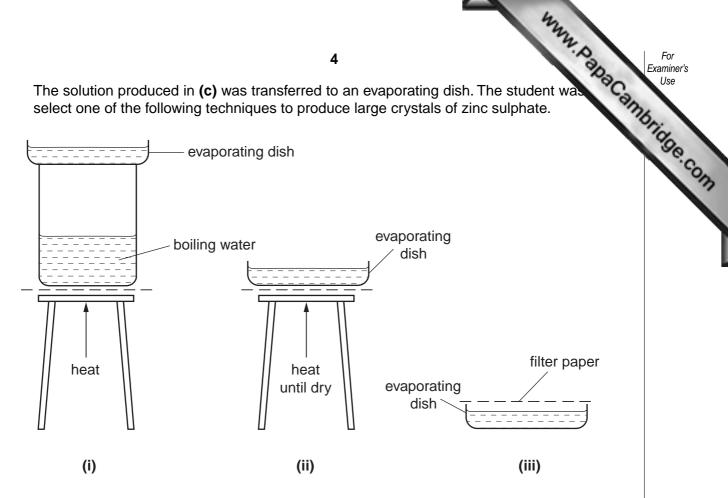

..... cm³ [1]

[Total: 2]

A student made some zinc sulphate by reacting zinc carbonate with dilute sulphuric 2

		the state of the s

		at made some zinc sulphate by reacting zinc carbonate with dilute sulphuric accordered zinc carbonate was added to a beaker half-filled with dilute sulphuric accidioxide was produced.
(a)	Give	e a test for carbon dioxide.
	test	
	obs	ervation[1]
(b)	(i)	The acid was in excess. How did the student know that the reaction had stopped?
		[1]
	(ii)	If the zinc carbonate was in excess, what additional observation would the student make?
		[1]
		re that all the acid had been neutralised, the student added excess zinc carbonate ture was well stirred.
(c)	Hov	was the unreacted zinc carbonate removed from the mixture?
		[1]

The solution produced in (c) was transferred to an evaporating dish. The student was select one of the following techniques to produce large crystals of zinc sulphate.

(d) Which technique, (i), (ii) or (iii), would produce the largest crystals?

.....[1]

The student then repeated the experiment, this time adding 100 cm³ of 0.25 mol/dm³ sulphuric acid to an excess of zinc carbonate.

The equation for the reaction is

$$\mathsf{ZnCO}_3 \ + \ \mathsf{H}_2\mathsf{SO}_4 \ \longrightarrow \ \mathsf{ZnSO}_4 \ + \ \mathsf{CO}_2 \ + \ \mathsf{H}_2\mathsf{O}$$

(e) Calculate the number of moles of sulphuric acid used in this experiment.

..... moles [1]

(f) Use your answer to (e) and the equation to calculate the mass of zinc sulphate produced.

[A_r: Zn, 65; S, 32; O, 16]

	For
E	aminer's
	11

(g) Calculate the volume of carbon dioxide produced during the reaction. [One mole of a gas occupies 24 dm³ at room temperature and pressure.]

ing the reaction. ature and pressure.]	For Examiner's Use
dm ³ [1]	

[Total: 8]

www.PapaCambridge.com 3 (a) A student set up the apparatus shown in the diagram. She then carefully remove glass disc allowing the contents of the gas jars to mix.

			.[1]
	(ii)	Name the process illustrated in this experiment.	
			.[1]
(b)		other student was given a sample of a hydrocarbon. She added it to aqueous brom a reaction took place.	ine
	(i)	State the colour of aqueous bromine	
		before the addition of the hydrocarbon,	
		after the addition of the hydrocarbon	[1]
	(ii)	What do these results suggest about the structure of the hydrocarbon?	
			[1]

	What general name is given to this reaction? 1 mole of the hydrocarbon reacts with 1 mole of bromine.	F
(iii)	What general name is given to this reaction?	70
(iv)	1 mole of the hydrocarbon reacts with 1 mole of bromine. In this experiment 4.2 g of the hydrocarbon reacted with 16 g of bromine. Calculate the formula of the hydrocarbon and state its name. [A _r : C, 12; H, 1; Br, 80]	3

			[1]

The diagram below shows the apparatus used to record the change in mass during the 5 course of a reaction. 50 cm³ of an aqueous solution of either an acid or an alkali was added to 10 g of a solid.

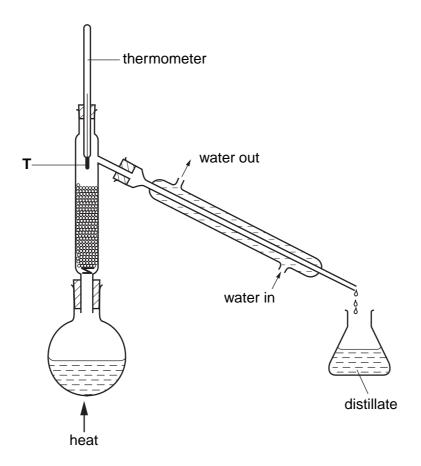

The total mass was observed to **decrease** as the reaction progressed.

Which of the following reactions could **not** be taking place?

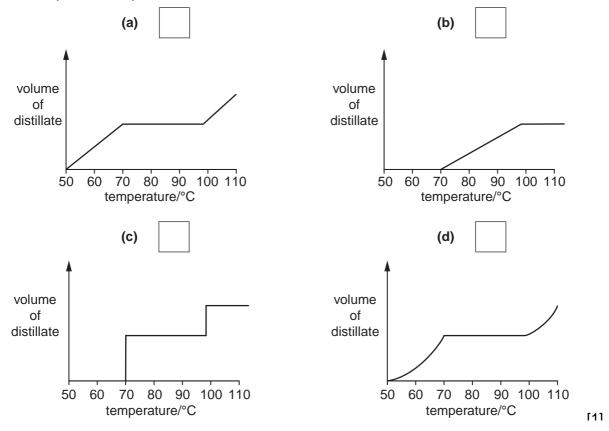

(a)	zinc with hydrochloric acid	
(b)	ammonium chloride with sodium hydroxide	
(c)	magnesium oxide with hydrochloric acid	
(d)	calcium carbonate with hydrochloric acid	

[1]

The diagram below shows the apparatus used to separate hexane (boiling point, 70 heptane (boiling point, 98°C).

Which graph would be obtained if the total volume of distillate collected was plotted against the temperature at point **T**?

7 The diagram below shows the pH at which a change in colour occurs for the indicators orange and methyl red.

diagram below s nge and methyl r			I 0 nange in colc	our occurs fo	or the indicate	For Examiner's Use	
methyl orange		red		yellov	V	Se'C	OM
рН	2	3	4	5	6		
methyl red		red			yellow		ı

A student was given three solutions. The pH of each is shown in the table below.

solution	Х	Y	Z
pН	3.0	5.0	6.0

In which of the solutions will both indicators be yellow?

- (a) X only
- (b) X and Y
- (c) Y and Z
- (d) Z only

[1]

For Examiner's Use

- 8 A student was given a sample of an organic acid, T, and asked to
 - · determine its relative molecular mass, and
 - suggest its molecular formula.

A sample of the acid was placed in a previously weighed container and reweighed.

mass of the container and the acid = 8.25 gmass of container = 6.74 g

(a) Calculate the mass of the acid used in the experiment.

9	ე [1
---	------

The student transferred the sample to a beaker and added 50.0 cm³ of 1.00 mol/dm³ sodium hydroxide. The contents of the beaker were allowed to react and then transferred to a volumetric flask. The solution was made up to 250 cm³ with distilled water. This was solution **S**.

25.0 cm³ of **S** was transferred into a conical flask.

(b) What piece of apparatus was used to measure this volume of **S**?

A few drops of phenolphthalein indicator were added to the conical flask.

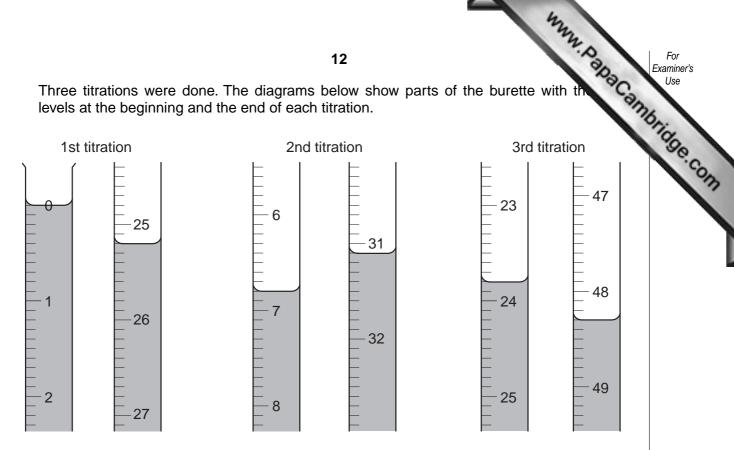

0.100 mol/dm³ hydrochloric acid was placed in a burette and added to the solution in the conical flask until an end-point was reached.

Phenolphthalein is colourless in acidic solution and pink in alkaline solution.

- (c) What was the colour of the solution in the conical flask

[1]

Three titrations were done. The diagrams below show parts of the burette with the levels at the beginning and the end of each titration.

(d) Use the diagrams to complete the following table.

titration number	1	2	3
final reading/cm ³			
initial reading/cm ³			
volume of hydrochloric acid used/cm ³			
best titration results (✓)			

Summary

Tick (\checkmark) the best titration results.

these results, the average volume of hydrochloric acid required Using was cm³. [4]

(e) Calculate the number of moles of hydrochloric acid in the average volume of 0.100 mol/dm³ hydrochloric acid calculated in **(d)**.

[Total: 9]

www.PapaCambridge.com 10 A student did two experiments to investigate the effect of temperature change when zinc are added separately to 50.0 cm³ samples of copper(II) sulphate solution. The refor the addition of iron to the copper(II) sulphate have been entered into the table in part

The student repeated the experiment using zinc. The diagrams below show parts of the thermometer stems for the highest temperature recorded after each addition of zinc.

(a) You are to record these temperatures in the table below and then calculate the rise in temperature for each reading.

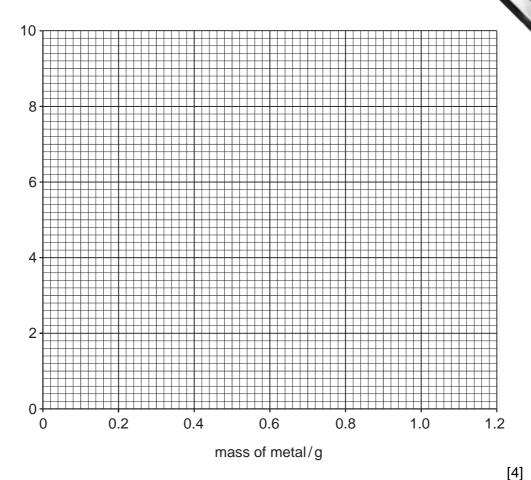

NOTE: for both experiments the initial temperature of the copper(II) sulphate solution was 25.0 °C.

experime	nt with iron
mass of iron/g	temperature rise/°C
0.0	0.0
0.2	1.8
0.4	3.6
0.6	5.4
0.8	6.2
1.0	6.2
1.2	6.2

experiment with zinc
