Paper 2 Algorithms, Programming and Logic MARK SCHEME Maximum Mark: 75 2210/21 May/June 2024

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each guestion paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question .
- the specific skills defined in the mark scheme or in the generic level descriptors for the question .
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond • the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do ٠
- marks are not deducted for errors .
- marks are not deducted for omissions .
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the ٠ question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Mark scheme abbreviations

/ separates alternative words / phrases within a marking point
 // separates alternative answers within a marking point
 <u>underline</u> actual word given must be used by candidate (grammatical variants accepted)
 max indicates the maximum number of marks that can be awarded
 () the word / phrase in brackets is not required, but sets the context

Note: No marks are awarded for using brand names of software packages or hardware.

Question	Answer	Marks
1	D	1

Question	Answer M								
2(a)	One mark for each correct line		4						
	Description	Programming concept							
	a subroutine that may not return a value	function							
	a value that is declared and used within	procedure							
	a specific procedure	parameter							
	a value that a procedure expects you to supply when it is called	global variable							
	a subroutine that will always return a value	local variable							
2(b)	One mark per mark point		2						
	 Correct key word - CALL Procedure name with correct parameters - 2 	Average(25, 50)							
	CALL Average(25, 50)								

Question	Answer	Marks
2(c)	One mark per mark point, max three	3
	 Procedures / functions divide the program into smaller manageable segments making it more readable / easier to understand / easier to debug Procedures / functions with meaningful names help to provide documentation for the program / enable/help/provide abstraction 	
	• Procedures and functions may be re-used (in the program / in other programs / as part of a library) / run from a single line	
	Procedures and functions can reduce / eliminate (repeated) code	

Question	Answer	Marks
3	One mark for a correct statement about each data type … … one mark for a correct example of data for each data type.	4
	Example answer	
	Integer A whole number [1] Example 27 [1]	
	Real A number that contains a fractional part [1] … Example 18.75 [1]	

Question	Answer	Marks
4(a)	One mark per mark point	4
	• Line 01 / DECLARE LOOP : STRING should be DECLARE LOOP : INTEGER	
	 Line 07 / IF Loop ← 1 TO Limit should be FOR Loop ← 1 TO Limit 	
	• Line 09 / INPUT Loop should be INPUT Value	
	 Line 10 / Total ← Total * Value should be Total ← Total + Value 	
	Correct algorithm:	
	<pre>01 DECLARE Loop : INTEGER 02 DECLARE Limit : INTEGER 03 DECLARE Value : REAL 04 DECLARE Total : REAL 05 Total ← 0 06 Limit ← ROUND(RANDOM() * 19,0) + 1 07 FOR Loop ← 1 TO Limit 08 OUTPUT "Enter a number" 09 INPUT Value 10 Total ← Total + Value 11 NEXT Loop 12 OUTPUT "The total of the numbers entered is ", Total 13 OUTPUT "The average number entered is ", Total / Limit</pre>	

Question	Answer	Marks
4(b)	 One mark per mark point Correct use of ROUND with 2 arguments separated by comma, for example ROUND(5, 2) (in statement 13) (Total / Limit, 1) correct arguments For example: OUTPUT "The average of the numbers entered is ", ROUND(Total / Limit, 1) 	2
4(c)	 One mark per mark point, max four After line 09 / after the input Insert a WHILE / pre-condition loop to check if the value entered is between 1 and 500 inclusive If the value is not in range, output an error message and insert another input statement for re-input. Or Before line 08 / before the input message start a REPEAT / post-condition loop After line 09 / after the input close the REPEAT loop by checking if the value entered was between 1 and 500 inclusive If it wasn't, (the loop will repeat) for the number to be re-input / If it was, the program continues. 	4

Cambridge O Level – Mark Scheme PUBLISHED

May/June 2024

Question	Answer	Marks
5	One mark per mark point	5
	 MP1 Correct input statement with appropriate variable MP2 Elements of selection statement present – CASE OF ENDCASE MP3 At least one correct branch in the case statement MP4 All branches from 1 to 4 correct MP5 Correct use of OTHERWISE with correct output. 	
	For example:	
	INPUT Number CASE OF Number 1 : OUTPUT Number 2 : OUTPUT Number 3 : OUTPUT Number 4 : OUTPUT Number OTHERWISE OUTPUT "ERROR" ENDCASE Or	
	INPUT Number CASE OF Number 1 : OUTPUT 1 2 : OUTPUT 2 3 : OUTPUT 3 4 : OUTPUT 4 OTHERWISE OUTPUT "ERROR" ENDCASE

Question	Answer	Marks							
7(a)	One mark per mark point, max two	2							
	 Data stored in a file gives a permanent copy / prevents the data from being lost so it can be recalled / used again in a program / in another program can be stored elsewhere / transferred to another computer 								
7(b)	One mark per mark point, max four MP1 Declaration of a string variable MP2 Correct use of OPENFILE keywords for reading MP3 Correct use READFILE with string variable MP4 Correct use of UCASE and LENGTH functions and output of each MP5 Correct use of CLOSEFILE Example: DECLARE Words : STRING OPENFILE Quotation.txt FOR READ READFILE Quotation.txt, Words OUTPUT UCASE (Words), LENGTH (Words) CLOSEFILE Quotation.txt	4							

Question	Answer									
8(a)	One mark for each correct gate, with the correct input(s) as shown.	5								

Question	Answer				Marks			
8(b)	Four marks for eight correct outputs. Three marks for six or seven correct outputs. Two marks for four or five correct outputs. One mark for two or three correct outputs							
	R	S	т	z				
	0	0	0	1				
	0	0	1	1				
	0	1	0	1				
	0	1	1	0				
	1	0	0	1				
	1	0	1	0				
	1	1	0	1				
	1	1	1	1				

Question	Answer	Marks
9(a)	One mark for an appropriate reason if no has been stated, for example:	1
	None of the fields are likely to contain unique data.	
9(b)	One mark for each correct answer	5
	SUM NumberInStock SoftDrinks Container 'Can'	
	Correct code:	
	SELECT SUM (NumberInStock) FROM SoftDrinks WHERE Container = 'Can';	
10	Data structures required:	15
	The names underlined must match those given in the scenario:	
	Arrays or lists <u>Clubs[]</u> , Elements: Elements: Eleme	
	Variables Matches, Won, Drawn, Lost, Counter, Maximum, TieCheck, OutLoop, Max, Count	
	Requirements (techniques):	
	 R1 Input and store number of matches, cricket club names, number of matches won, drawn and lost. Validation of number of matches played and matches won, lost and drawn against number of matches played (with prompts, iteration, storing data in variables, validation, 1D and 2D arrays). R2 Calculate and store the number of points for each cricket club. Finding the index of the array with the highest score / highest score (calculation, finding the maximum, iteration). R3 Identifying cricket clubs with highest number of points and whether there is a tie for the top position. Output with appropriate messages (iteration, selection and output). 	

Question	Answer	Marks
10	Example 15-mark answer in pseudocode	
10	<pre>Example 15-mark answer in pseudocode // meaningful identifiers and appropriate data structures // similar variables grouped to save space as in HL languages DECLARE Clubs : ARRAY[1:12] OF STRING DECLARE Clubs : ARRAY[1:12] OF INTEGER DECLARE Points : ARRAY[1 : 12] OF INTEGER DECLARE TieIndex : ARRAY[1 : 12] OF INTEGER DECLARE Matches, Won, Drawn, Lost : INTEGER DECLARE Matches, Won, Drawn, Lost : INTEGER DECLARE Max, Count : INTEGER // input number of matches REPEAT OUTPUT "How many matches have been played (Maximum 22)? " INPUT Matches UNTIL Matches <= 22 // input of data as a single loop - multiple loops for data entry // is also acceptable. FOR Counter / 1 TO 12 OUTPUT "Enter the name of the cricket club" INPUT Clubs[Counter] // input of match results with validation REPEAT OUTPUT "Enter the number of matches won, drawn and lost for ", Clubs[Counter] INPUT Won, Drawn, Lost IF Won + Drawn + Lost <> Matches THEN</pre>	
	OUTPUT "Your inputs must total ", Matches, " please try again" ENDIF	
	UNTIL Matches = Won + Drawn + Lost	
	Statistics[Counter, 1] \leftarrow Won	
	Statistics[Counter, 2] ← Drawn	
	Statistics[Counter, 3] ← Lost	
	// calculating and storing points	

Question	Answer	Marks
10	<pre>Points[Counter] ← Statistics[Counter, 1] * 12 + Statistics[Counter, 2] * 5 NEXT Counter // finding the highest points Max ← -100 FOR Maximum ← 1 TO 12 IF Points[Maximum] > Max THEN Max ← Points[Maximum] ENDIF NEXT Maximum // finding the winner(s) Count ← 0 FOR TieCheck ← 1 TO 12 IF Points[TieCheck] = Max THEN Count ← Count + 1 TieIndex[Count] ← TieCheck ENDIF Next TieCheck // outputting the results FOR OutLoop ← 1 TO Count OUTPUT "Winning Club(s): ", Clubs[TieIndex[OutLoop]] OUTPUT "Winning Points: ", Max</pre>

AO2: Apply knowledge and understanding of the principles and concepts of computer science to a given context, including the analysis and design of computational or programming problems

0	1–3	4–6	7–9
No creditable response.	At least one programming technique has been used. <i>Any use of selection, iteration,</i> <i>counting, totalling, input and output.</i>	Some programming techniques used are appropriate to the problem. More than one technique seen applied to the scenario, check the list of techniques needed. The range of programming techniques used is appropriate problem. All criteria stated for the scen have been covered by the u appropriate programming te check the list of techniques	
	Some data has been stored but not appropriately. Any use of variables or arrays or other language dependent data structures e.g. Python lists.	Some of the data structures chosen are appropriate and store some of the data required. <i>More than one data structure used to store data required by the scenario.</i>	The data structures chosen are appropriate and store all the data required. <i>The data structures used store all the data required by the scenario.</i>
