| CANDIDATE <br> NUMBER |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |

You must answer on the question paper.
No additional materials are needed.

## INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

## INFORMATION

- The total mark for this paper is 80 .
- The number of marks for each question or part question is shown in brackets [ ].

## Mathematical Formulae

## 1. ALGEBRA

Quadratic Equation
For the equation $a x^{2}+b x+c=0$,

$$
x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}
$$

Binomial Theorem

$$
(a+b)^{n}=a^{n}+\binom{n}{1} a^{n-1} b+\binom{n}{2} a^{n-2} b^{2}+\ldots+\binom{n}{r} a^{n-r} b^{r}+\ldots+b^{n}
$$

where $n$ is a positive integer and $\binom{n}{r}=\frac{n!}{(n-r)!r!}$

Arithmetic series

$$
\begin{aligned}
& u_{n}=a+(n-1) d \\
& S_{n}=\frac{1}{2} n(a+l)=\frac{1}{2} n\{2 a+(n-1) d\}
\end{aligned}
$$

Geometric series

$$
\begin{aligned}
& u_{n}=a r^{n-1} \\
& S_{n}=\frac{a\left(1-r^{n}\right)}{1-r}(r \neq 1) \\
& S_{\infty}=\frac{a}{1-r}(|r|<1)
\end{aligned}
$$

## 2. TRIGONOMETRY

Identities

$$
\begin{gathered}
\sin ^{2} A+\cos ^{2} A=1 \\
\sec ^{2} A=1+\tan ^{2} A \\
\operatorname{cosec}^{2} A=1+\cot ^{2} A
\end{gathered}
$$

Formulae for $\triangle A B C$

$$
\begin{gathered}
\frac{a}{\sin A}=\frac{b}{\sin B}=\frac{c}{\sin C} \\
a^{2}=b^{2}+c^{2}-2 b c \cos A \\
\Delta=\frac{1}{2} b c \sin A
\end{gathered}
$$

1 The functions f and g are defined as follows, for all real values of $x$.

$$
\begin{align*}
& \mathrm{f}(x)=2 \sin x+3 \cos x \\
& \mathrm{~g}(x)=\mathrm{e}^{3 x}-1 \tag{2}
\end{align*}
$$

(a) Find $\mathrm{fg}(0)$.
(b) Find $\operatorname{gg}(x)$.
(c) Solve the equation $\mathrm{g}^{-1}(x)=\frac{1}{3} \ln 5$.

2 Find the values of $k$ for which the curve $y=x^{2}+k x+(4 k-15)$ is completely above the $x$-axis.

3 (a) Solve the following simultaneous equations.

$$
\begin{align*}
& 3 \log _{2} x+2 \log _{2} y=24 \\
& 5 \log _{2} x-3 \log _{2} y=2 \tag{5}
\end{align*}
$$

(b) Solve the equation $\frac{2^{t+4}}{2^{1-2 t}}=512$.

4 Find the exact value of $\int_{3}^{5} \frac{(x-1)^{2}}{x^{3}} \mathrm{~d} x$.

5 The curved surface area of a cylinder with radius $r$ and height $h$ is $2 \pi r h$.
A closed cylinder has radius $r \mathrm{~cm}$ and volume $1000 \mathrm{~cm}^{3}$.
(a) Show that the total surface area of the cylinder is $2 \pi r^{2}+\frac{2000}{r} \mathrm{~cm}^{2}$.
(b) Find the value of $r$ which makes this area a minimum. You should show that your value of $r$ gives a minimum for this area.

6 A particle travels in a straight line. Its displacement, $s$ metres, from the origin, at time $t$ seconds, where $t>2$, is given by $s=\ln \left(4 t^{2}-5\right)-t$.
(a) Find expressions for the velocity, $v \mathrm{~ms}^{-1}$, and acceleration, $a \mathrm{~ms}^{-2}$, of the particle.
(b) Find the time when the particle is at rest.
(c) Find the acceleration at this time.

7 DO NOT USE A CALCULATOR IN THIS QUESTION.

You may use the following trigonometrical ratios.

$$
\begin{aligned}
& \sin 60^{\circ}=\frac{\sqrt{3}}{2}, \quad \sin 45^{\circ}=\frac{\sqrt{2}}{2} \\
& \cos 60^{\circ}=\frac{1}{2}, \quad \cos 45^{\circ}=\frac{\sqrt{2}}{2} \\
& \tan 60^{\circ}=\sqrt{3}, \quad \tan 45^{\circ}=1
\end{aligned}
$$

(a) Given that the area of triangle $A B C$ is $\frac{3+\sqrt{3}}{4}$, show that $\sin 75^{\circ}=\frac{\sqrt{6}+\sqrt{2}}{4}$.
(b) Hence find the exact length of $A C$.

8 (a) Show that $\frac{\sin x}{\tan x-1}-\frac{\cos x}{\tan x+1}=\frac{\cos x}{\sin ^{2} x-\cos ^{2} x}$.
(b) Hence solve the equation $\frac{\sin x}{\tan x-1}-\frac{\cos x}{\tan x+1}=1$ for $0^{\circ}<x<360^{\circ}$.

9 A curve has equation $y=x \mathrm{e}^{2 x}$.
(a) Find $\frac{\mathrm{d} y}{\mathrm{~d} x}$.
(b) Find the equation of the normal to the curve at $x=1$.
(c) Use your answer to part (a) to find the exact value of $\int_{0}^{2} 2 x \mathrm{e}^{2 x} \mathrm{~d} x$.

10 (a) In an arithmetic progression the 5th term is 11 . The 7th term is three times the 2 nd term. Find the 1st term and the common difference.
(b) A different arithmetic progression (AP) and a geometric progression (GP) have the following properties.

- The 1 st terms of the AP and GP are both 3 .
- The 2nd term of the AP is the same as the 3rd term of the GP.
- The 6th term of the AP is the same as the 5th term of the GP.
- The common ratio of the GP is greater than 1 .

Find the common difference of the AP and the common ratio of the GP.
