Paper 2 Multiple Choice (Extended)

October/November 2024

45 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet  
Soft clean eraser  
Soft pencil (type B or HB is recommended)

## INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A, B, C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.

## INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.

This document has **16** pages. Any blank pages are indicated.

1 Which term describes the ability to detect and respond to changes in the environment?

- A excretion
- B growth
- C movement
- D sensitivity

2 The diagram shows some cells in the gas exchange system.

Which label shows the part of the gas exchange system where these cells are found?

3 Which biological molecule contains the elements carbon, hydrogen, nitrogen and oxygen?

- A carbohydrate
- B fat
- C oil
- D protein

4 The graph shows the effect of temperature on the rate of an enzyme-controlled reaction.

Which statements are correct?

- 1 Enzyme molecules denature above 50 °C and below 20 °C.
- 2 Increasing the temperature between 10 °C and 40 °C increases the kinetic energy of enzyme molecules.
- 3 The shape of the active site changes between 40 °C and 60 °C.

**A** 1, 2 and 3    **B** 1 and 2 only    **C** 1 and 3 only    **D** 2 and 3 only

5 The diagram shows a mesophyll cell.

In which structure does photosynthesis take place?

6 The diagram shows a villus.

What are structures P and Q and which substances do they absorb?

	structure		substance absorbed	
	capillary	lacteal	amino acids	fatty acids
<b>A</b>	P	Q	P	Q
<b>B</b>	P	Q	Q	P
<b>C</b>	Q	P	P	Q
<b>D</b>	Q	P	Q	P

7 In which weather conditions is the rate of transpiration fastest?

- A** cold and dry
- B** cold and wet
- C** warm and dry
- D** warm and wet

- 8 A student breathed gently in and out of the mouthpiece of the apparatus shown.

What were the results after 10 breaths?

	P	Q
<b>A</b>	colourless	colourless
<b>B</b>	colourless	milky
<b>C</b>	milky	colourless
<b>D</b>	milky	milky

- 9 A student looks at an object at a distance and then looks at an object close by. This ability to focus on both objects is brought about by changing the shape of the lens.

What is this called?

- A** accommodation  
**B** coordination  
**C** pupil reflex  
**D** transmission
- 10 Which statement describes one similarity between asexual and sexual reproduction?
- A** They both involve gametes.  
**B** They both involve parent and offspring.  
**C** They both produce genetically identical individuals.  
**D** They both require fertilisation to take place.

- 11 Horn development in some cattle is controlled by a pair of alleles. The allele for not developing horns is dominant to the allele for developing horns.

The pedigree diagram shows cattle with and without horns.

How many of the cattle are definitely heterozygous?

- A** 2                      **B** 3                      **C** 4                      **D** 5
- 12 What is an example of an ecosystem?
- A** a decomposing log and the organisms in it
- B** a food chain
- C** the network of burrows in which some rabbits live
- D** the oak trees in a forest
- 13 Which processes change the amount of carbon dioxide in the air?

	process causing increase in carbon dioxide	process causing decrease in carbon dioxide
<b>A</b>	burning fossil fuels	photosynthesis in plants
<b>B</b>	photosynthesis in plants	respiration in animals
<b>C</b>	respiration in animals	respiration in plants
<b>D</b>	respiration in plants	burning fossil fuels

14 Sea water is heated in the apparatus shown.

Which row describes changes at positions X and Y?

	at X	at Y
<b>A</b>	concentration of solution decreases	solvent condenses
<b>B</b>	concentration of solution decreases	solute condenses
<b>C</b>	concentration of solution increases	solvent condenses
<b>D</b>	concentration of solution increases	solute condenses

15 An experiment is assembled to measure the rate of reaction between limestone and hydrochloric acid.

In the experiment a gas is released. The volume of gas produced is measured every five seconds.

Which piece of apparatus **cannot** be used to measure the volume of gas?

- A** burette
- B** measuring cylinder
- C** pipette
- D** gas syringe

16 What is a property of a typical covalent compound?

- A** low electrical conductivity
- B** high melting point
- C** low volatility
- D** soluble in water

17 The formula of an ammonium ion is  $\text{NH}_4^+$ .

The formula of a phosphate ion is  $\text{PO}_4^{3-}$ .

What is the formula of ammonium phosphate?

- A**  $(\text{NH}_4)_3\text{PO}_4$     **B**  $(\text{NH}_4)_2\text{PO}_4$     **C**  $\text{NH}_4\text{PO}_4$     **D**  $\text{NH}_4(\text{PO}_4)_3$

18 Which statement describes what happens during electrolysis?

- A** Covalent compounds produce more complex substances.  
**B** Covalent compounds produce simpler substances.  
**C** Ionic compounds produce more complex substances.  
**D** Ionic compounds produce simpler substances.

19 When a match burns, heat and light energy are produced.

Which row describes the type of change and the type of reaction taking place?

	type of change	type of reaction
<b>A</b>	chemical	endothermic
<b>B</b>	chemical	exothermic
<b>C</b>	physical	endothermic
<b>D</b>	physical	exothermic

20 The equation for the reaction between sulfur dioxide and oxygen is shown.

Which statements explain why the rate of this reaction increases at higher temperatures?

- 1 The molecules move closer together so they collide more frequently.
- 2 The molecules move more quickly so they collide more frequently.
- 3 The activation energy is decreased.
- 4 More colliding particles possess the activation energy.

- A** 1 and 3    **B** 1 and 4    **C** 2 and 3    **D** 2 and 4

21 All Group I metal compounds and all Group II metal chlorides are soluble in water.

All Group II metal carbonates and barium sulfate are insoluble.

Which method is used to prepare barium sulfate using barium carbonate?

- A direct combination of solid barium carbonate and dilute sulfuric acid
- B reaction of solid barium carbonate and hydrogen chloride gas, followed by reaction with dilute sulfuric acid
- C reaction of aqueous barium carbonate with dilute hydrochloric acid, followed by reaction with aqueous sodium sulfate
- D reaction of solid barium carbonate with dilute hydrochloric acid, followed by reaction with aqueous sodium sulfate

22 Which electronic structure belongs to a non-metallic element?

- A 2                      B 2,2                      C 2,8,2                      D 2,8,8,2

23 Tennessine is a newly discovered halogen and is below astatine in Group VII of the Periodic Table.

Which row predicts the appearance of tennessine and the effect of adding aqueous potassium iodide?

	appearance of tennessine	effect of adding aqueous potassium iodide to tennessine
A	black solid	iodine is formed
B	black solid	no reaction
C	brown liquid	iodine is formed
D	brown liquid	no reaction

24 Which statement about the extraction of metals is correct?

- A Aluminium ore is called hematite.
- B Aluminium is extracted from its ore by heating with carbon.
- C Iron oxide is reduced to iron by heating with carbon monoxide.
- D Limestone is used to remove basic impurities in a blast furnace.

25 In a test for water, water turns anhydrous copper(II) .....1..... from .....2..... to .....3..... .

Which words complete gaps 1, 2 and 3?

	1	2	3
<b>A</b>	chloride	blue	white
<b>B</b>	chloride	white	blue
<b>C</b>	sulfate	blue	white
<b>D</b>	sulfate	white	blue

26 What is a general formula for unsaturated hydrocarbons?

- A**  $C_nH_{n+2}$       **B**  $C_{2n}H_{2n+2}$       **C**  $C_nH_{2n}$       **D**  $C_nH_{2n+2}$

27 Poly(ethene) and nylon are two different types of polymer.

Which statement about these polymers is correct?

- A** Nylon is an addition polymer.  
**B** The linkage between monomers in nylon is  $-\text{CONH}-$ .  
**C** Poly(ethene) and nylon are made from the same monomers.  
**D** Poly(ethene) and nylon have the same linkages between their monomers.

28 A solid, rectangular metal block has the dimensions shown.

The mass of the block is 2700 g.

What is the density of the metal?

- A**  $\frac{25 \times 5}{2700} \text{ g/cm}^3$   
**B**  $\frac{25 \times 5 \times 8}{2700} \text{ g/cm}^3$   
**C**  $\frac{2700}{25 \times 5} \text{ g/cm}^3$   
**D**  $\frac{2700}{25 \times 5 \times 8} \text{ g/cm}^3$

- 29 The length of a spring changes when a force is applied to stretch the spring.

The table shows how the length of the spring depends on the force.

force / N	0	1.0	2.0	3.0	4.0	5.0
length of spring / cm	22	25	28	31	35	45

What is the length of the spring when the limit of proportionality is reached?

- A exactly 22 cm  
 B between 31 cm and 35 cm  
 C exactly 35 cm  
 D between 35 cm and 45 cm
- 30 A see-saw (teeter-totter) rests on a pivot at its centre.

NOT TO  
SCALE

A child of weight 250 N sits on one side of the see-saw at a distance of 1.6 m from the pivot.

A second child balances the see-saw by sitting on the other side of the pivot at a distance of 1.2 m from the pivot.

What is the weight of the second child?

- A 190 N            B 250 N            C 330 N            D 400 N
- 31 The Sun is the source of energy for most energy resources.
- In which group of resources is energy input from the Sun the **only** source of energy?
- A coal, geothermal, gasoline  
 B hydroelectric, tidal, waves  
 C natural gas, solar, wind  
 D nuclear, solar, wood

- 32 A student observes that a substance X does **not** flow.

Which statement about substance X is correct?

- A It can be either a gas or a liquid.  
 B It can only be a gas.  
 C It can only be a liquid.  
 D It can only be a solid.

33 A ray of light travels from glass into air.

In which direction is the light refracted and how does the speed of the light change?

	direction of refracted light	speed of light
<b>A</b>	bends away from the normal	decreases
<b>B</b>	bends away from the normal	increases
<b>C</b>	bends towards the normal	decreases
<b>D</b>	bends towards the normal	increases

34 Gamma rays and microwaves are both electromagnetic radiations.

Which statement about their frequencies and speeds in a vacuum is correct?

- A** Gamma rays have greater frequencies than microwaves and travel at a greater speed.
- B** Gamma rays have greater frequencies than microwaves and travel at the same speed.
- C** Gamma rays have smaller frequencies than microwaves and travel at a greater speed.
- D** Gamma rays have smaller frequencies than microwaves and travel at the same speed.

35 Which statement about the core of an electromagnet is correct?

- A** It is made of soft iron because soft iron is easy to magnetise.
- B** It is made of soft iron because soft iron does not lose its magnetism easily.
- C** It is made of steel because steel is easy to magnetise.
- D** It is made of steel because steel loses its magnetism easily.

36 A wire of a certain length has a resistance of  $8.0\Omega$ . A second wire made of the same material has double the length and double the cross-sectional area of the first wire.

What is the resistance of the second wire?

- A**  $4.0\Omega$
- B**  $8.0\Omega$
- C**  $16\Omega$
- D**  $32\Omega$

- 37 A circuit contains a cell and two resistors connected in parallel. The currents in each part of the circuit are labelled  $I_1$ ,  $I_2$  and  $I_3$ .

What is the relationship between the currents?

- A**  $I_1 = I_2$       **B**  $I_1 = I_3$       **C**  $I_1 > I_2 + I_3$       **D**  $I_1 = I_2 + I_3$
- 38 The instructions for a household lamp state that the plug must be fitted with a 3 A fuse. What happens if a 13 A fuse is fitted by mistake?
- A** The fuse blows too easily.  
**B** The lamp lights less brightly.  
**C** The wires connecting the lamp to the plug overheat if a fault develops.  
**D** Too much voltage is supplied to the lamp.
- 39 A transformer with an efficiency of 100% has an input current of 10 A. The input voltage is 100 V and the output voltage is 20 V. What is the output current?
- A** 2.0 A      **B** 10 A      **C** 50 A      **D** 200 A
- 40 A uranium nucleus decays into a thorium nucleus. The thorium nucleus then decays into a protactinium nucleus.

Which emissions take place during the decays?

- A** an alpha-particle followed by a beta-particle  
**B** an alpha-particle followed by another alpha-particle  
**C** a beta-particle followed by an alpha-particle  
**D** a beta-particle followed by another beta-particle
